INSPIRATION

THE DYNAMIC WORKPLACE

DESIGN AND FUNCTION

FOR WORKPLACES IN CHANGE

SCAN SØRLIE GÖTESSONS DAVID DESIGN

> We want to combine acoustics, function, design and flexibility in a way that improves the working environment while giving architects and interior designers the freedom to create.

Yes we need more screen time

At a time when we are constantly being told to cut down on our screen time, it may seem a little bold to suggest the exact opposite. But that is precisely what we are doing: more screen time for everyone! Because when we talk about screen time, we mean something entirely different. We mean peace and quiet at work. The ability to focus when everything around you is in full swing. The freedom to create your own space in the office without shutting out the world around you.

Screens have been an important part of Götessons for many years. In fact, we have produced more than five million of them. During that time, both workplaces and the way we work have changed – and so have our screens. Today, it is about much more than simply dividing a workspace. We want to combine acoustics, function, design and flexibility in ways that improve the working environment while giving architects and interior designers the freedom to create.

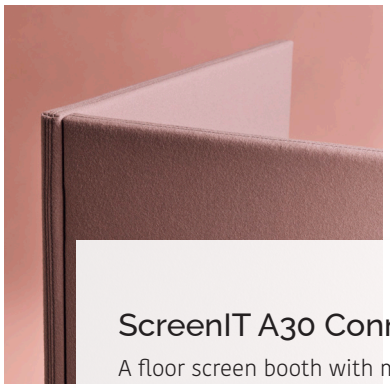

That is also why we never stop developing. Sometimes that means creating something completely new; sometimes it means making an already good solution a little smarter. New materials, improved acoustic performance, more ways to customise the look – or something as simple as a magnet that allows screens to connect without tools.

At the same time, the workplace of the future needs to be about more than just new products. With LOOP, existing screens can be given a longer life and used again, in a new environment or with a new look. To us, that is product development too: thinking about how what we already have can continue to create value.

So, in this magazine, we would like to inspire you to enjoy a little more screen time. We share news, ideas, environments and details that we believe make a difference. And perhaps we can also challenge the idea that a screen is just a screen. Because it really isn't.

Mattas Heurlin, Commercial Director, Götessons Design Group

STRAIGHT CORNERS

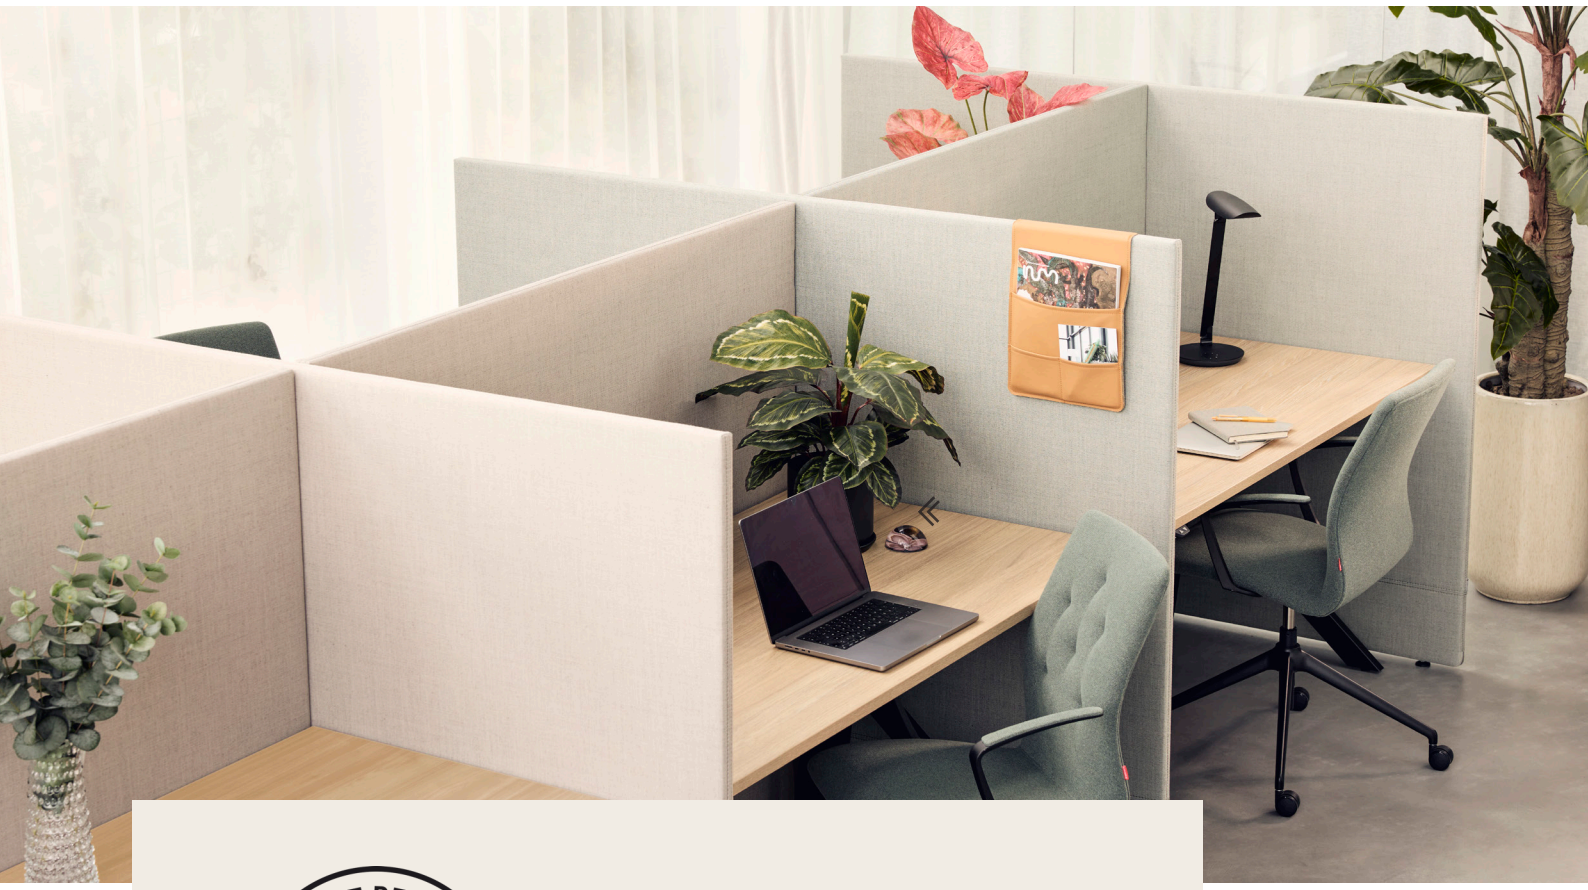

SCREENIT A30 CONNECT BOOTH

ScreenIT A30 Connect U- and H-Booths are sound-absorbing floor screen booths that combine smart functionality with a clean and minimalist design. Thanks to the straight corners and concealed magnetic connections, they create a clean and harmonious appearance that blends naturally into modern work environments. The screens are quick and easy to assemble. If more space is needed, the booth can easily be expanded with our extension screens to suit changing needs.

PATENT PENDING

The “Patent Pending” logo indicates that, together with our magnet supplier, we have applied for a patent for the unique solution we have designed. During the application process, our design is protected from being copied.

TECHNICAL INFORMATION

- Wooden frame filled with 30 mm sound-absorbing polyester
- 5 mm foam-laminated textile on each side
- Total thickness: 40 mm
- Height: 1400 mm
- Width: 1400/1600/1800 mm
- Depth: For desks 800/900 mm
- Concealed magnets
- The booths are supplied with adjustable feet, adjustable up to 40 mm
- Available with seam only
- For custom dimensions, please contact Götessons.

5 facts about magnets

1 **THE EARTH ACTS LIKE A GIANT MAGNET.**
That's why a compass always points north, even when we've lost our own sense of direction.

2 **ANIMALS HAVE A BUILT-IN NAVIGATION SYSTEM.**
Migratory birds, sea turtles and salmon can sense the Earth's magnetic field and use it to find their way.

3 **AN MRI SCANNER HAS AN INCREDIBLY STRONG MAGNETIC FIELD.**
A typical MRI scanner can have a magnetic field around 30,000 times stronger than the Earth's magnetic field.

4 **MAGNETS ALWAYS HAVE TWO POLES.**
Break a magnet in two and you won't get a single north or south pole, you'll get two new magnets.

5 **MAGNETIC FORCE WORKS WITHOUT ELECTRICITY.**
A permanent magnet can hold something in place year after year, with no charging, cables or batteries to replace.

> The beauty of magnets is that a fairly advanced principle results in something remarkably simple for the user. The screens find their place, connect and can just as easily be reconfigured again.

Fredrik Krusebrant
Product developer

Magnets do more than hold our screens in place

Magnets are everywhere in our society. They help doctors see inside the human body, enable wind turbines to generate energy, keep electric vehicles moving and help recycling facilities sort metals. In our screens, we use the same basic technology in a much simpler way: to provide stable, flexible and tool-free assembly.

At Götessons, we are always curious about how smart solutions can make a real difference in everyday life. In ScreenIT A30 Connect, we use concealed magnets to connect the screens quickly and easily. The result is a stable and flexible solution that can be reconfigured whenever needs change – completely without tools.

The magnetic force is localised and decreases rapidly with distance. This means that the screens remain securely connected while still being easy to move, reconfigure and reuse. On the next page, you can discover more products in our range that use magnets.

As with all strong magnets, certain precautions should be taken. People with pacemakers or other implanted medical devices should keep a safe distance from the magnets when they are separated. When our screens are connected and in the closed position, the magnetic field is considerably more limited, as the magnetic force is directed inwards between the screens.

One force.
Three functions.

From seating to writing boards and screens. Across our products, the same invisible force performs completely different tasks. Magnets make it possible to create flexible solutions with thoughtful details and effortless functionality, from open spaces to rooms designed for focus.

ATTACH

SCRIBBLE WRITING BOARD

Write, erase, sketch or attach papers and notes directly to the writing board with magnets. Scribble combines a writing surface and a sound-absorbing floor screen in one flexible solution for meeting rooms and creative spaces.

MOUNT

SCREENIT A30 MAGNET

ScreenIT A30 Magnet is a desk screen that attaches directly to the metal frame between two workstations using two magnets. Quick to install and one screen serves both workstations..

CONNECT

SANDY SOFA

Sandy is a flexible modular sofa series where the modules connect easily using concealed magnets. Create, change and reconfigure, to suit the needs, the space and the people.

A startup hotspot in full bloom

BRYCK Startup Alliance in Essen is a dynamic tech hotspot where startups, investors and corporate partners meet to build the next generation of companies. To reflect this innovative environment, the interior design needed to break away from the traditional office aesthetic.

For this project, we delivered around 300 plants, a large selection of plant pots, and several screens to shape a lively and inspiring workspace. The concept focused on creating a bold and expressive interior that supports BRYCK's forward-thinking business model.

Greenery plays a central role throughout the space. Plants are featured in both small and large pots, creating a layered and vibrant atmosphere across the office. To further enhance the environment, garlands of greenery are suspended from ceiling-mounted lamps, adding movement and softness to the industrial architecture.

A unique feature of the interior is the custom plywood tree, integrated into the space and decorated with hanging garlands. Together, these elements create a playful yet sophisticated environment that stands out from a classic office setting while reinforcing BRYCK's identity as a modern innovation hub.

Screens in focus in collaboration with Gabriel Fabrics

In our latest campaign, ”Yes we need more screen time”, our screens took centre stage in a new way. As part of the concept, we created custom-made jackets in the same fabric as the screens. The jackets were worn by the models featured in the photoshoot. In collaboration with textile supplier Gabriel Fabrics, we chose the fabric Focus, a textile that proved to be a perfect match for the style we wanted to achieve in the campaign.

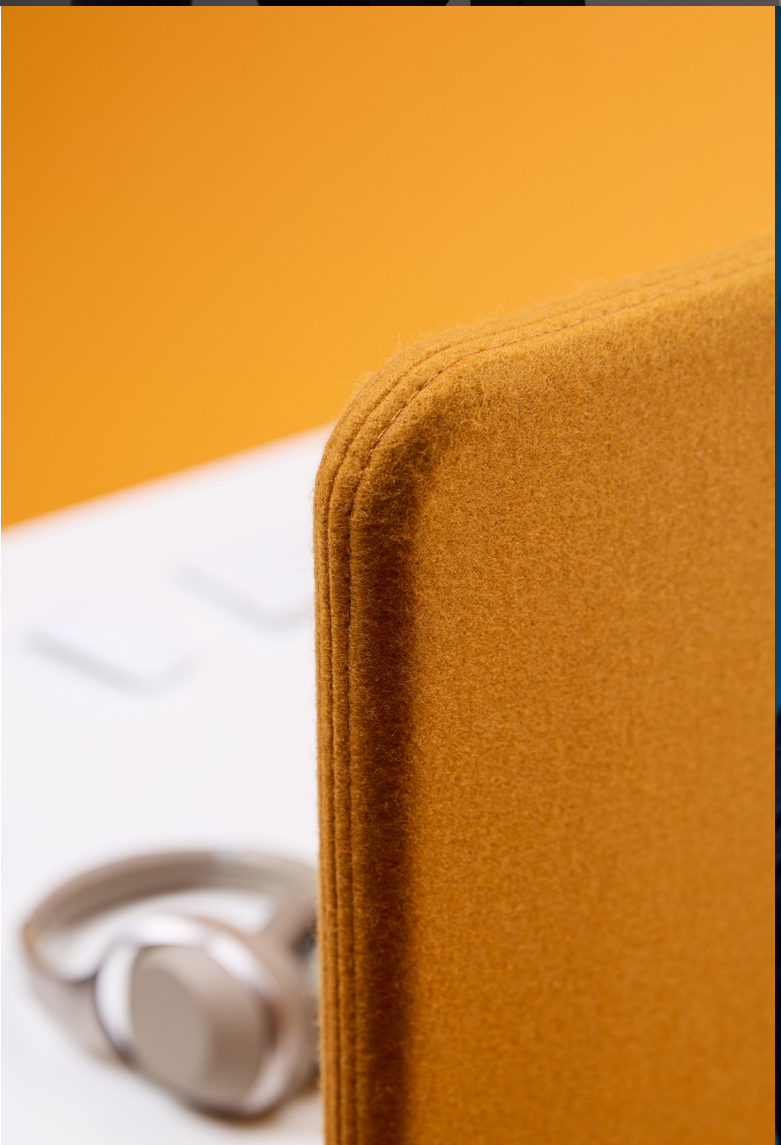

– I wanted to create a retro-inspired look with elements of the classic workwear jacket. Focus was the obvious choice thanks to its combination of durable wool and soft character, says Jessica Carlstein, Marketing Manager at Götessons.

Over the years, we have learned that every workplace has different needs, challenges and conditions. That is why the purpose of the campaign was to playfully ask the question: ”Which screen are you?” while helping visitors find the right screen for their project.

Since Götessons started manufacturing screens 16 years ago, we have delivered more than five million screens to customers in 52 countries. Over the years, the range has grown to 36 different models, with our latest addition, ScreenIT A30 Core, naturally taking its place in the campaign as well.

– We often say that we know screens, and after manufacturing five million of them, I think we have earned the right to say so, Jessica says. At the same time, we do not only want to talk about new products. We also want to highlight the opportunity to give existing screens a new life through LOOP, our concept for reuse and circular solutions.

SCREENIT A30 CORE

WE ALL HAVE DIFFERENT CHALLENGES AND DIFFERENT NEEDS.

WHICH SCREEN ARE YOU?

THE UNCOMPLICATED ONE

Focus on work — not on unnecessary extras.

Choose ScreenIT A30 Core, a simpler screen available in selected sizes and with unlaminated textile, without compromising on quality or sound absorption. A screen that gets the job done without taking up too much space or attention.

Other matching screens:
ScreenIT Standard

NEWS!

SCREENIT A30 CORE

ScreenIT A30 Core is a classic A30 screen with a 30 mm sound absorber inside a wooden frame. Core features non-laminated fabric, making it a simpler and highly cost-effective screen without compromising on quality or sound absorption. Core is available in five standard fabrics: Cool, Pretty, Event Screen, Twist/Twist Melange and Focus. Available with both rounded and straight corners.

WE ALL HAVE DIFFERENT CHALLENGES AND DIFFERENT NEEDS.

WHICH SCREEN ARE YOU?

THE ONE WHO LIKES BALANCE

Our most popular choice — for a reason.

Choose ScreenIT A30. It has everything you need — certifications, labels, and several choices in appearance and design. A smart choice that works in every situation.

Other matching screens:

SCREENIT A30 TERRA

Acoustics that stand out and make a difference

When Länsförsäkringar IT moved into its new premises in Sundsvall, the ambition was to create an inspiring and distinctive office environment, far removed from traditional solutions with rows of screens. With such a large open plan office, acoustics became an important part of the project from the very beginning. In close collaboration with Götessons' 3D department, the required amount of sound absorption was calculated. Based on these calculations, products and placements were proposed to create the right acoustic conditions while also contributing to the playful character of the office.

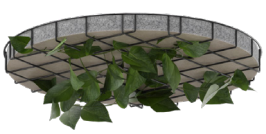

Several different types of acoustic solutions have been used throughout the open spaces. Wall absorbers are combined with suspended ceiling absorbers and desk screens, helping to absorb sound at different levels throughout the room. The suspended products play a particularly important role in the open plan environment, where they provide visual separation while absorbing sound waves that would otherwise easily travel through the large open spaces. TILES NOVA

Tiles Nova are sound absorbers for grid ceiling systems that add a personal touch to the ceiling. Nova is a sheer fabric made from 100% flame retardant Trevira CS, offering a wide range of possibilities. Nova is certified according to the European Ecolabel scheme, making it a sustainable choice.

NEW COLOURS!

At home at work

When Halden Boligbyggelag, HABO, set out to renovate its premises in Halden, “At Home at Work” became the common thread throughout the entire project. The goal was to create a place where employees feel comfortable and enjoy spending time, while also welcoming customers and visitors into a warm and inviting environment.

The existing premises were opened up and given a completely new look, while everything that could be reused was incorporated into the new interior. Natural materials such as wood and wool are used throughout the space. Combined with soft colours and carefully selected details, they create a distinctly warm and homely atmosphere.

– The idea behind the “At Home at Work” concept is to create a place that people look forward to coming to, while also giving customers a warm and welcoming feeling. Quite simply, you should feel at home, explain interior consultants Marthe Evensen and Lone Bjerke Falch.

Scan Sørlie supplied furniture and interior solutions for the new workplace. Mr Box creates secluded spaces for conversations and focused work, while Tekla has found its place in the meeting rooms. Storage cabinets and other carefully considered solutions contribute to calm, functional and well-organised workspaces.

The result is a workplace where the professional meets the personal, with space for concentration, conversations and meetings. An environment designed both for those who work here every day and for those who come to visit.

4 WAYS TO REUSE YOUR SCREEN

A conscious choice in any project can be to reuse existing desk screens instead of ordering new ones. Below, we showcase a few different ways to give your screens a new life. It's both cost-effective and a better choice for the environment.

REUSING THE ENTIRE OFFICE – AGAIN AND AGAIN

Loop.
One more time.
And again.
Everything moves in circles and returns. Then back out again.
And back once more.
Becomes something new from something old.
Becomes something different from something pre-owned.
Becomes the same — yet something else entirely.
An intention, a mindset, a way of being.
A collaboration, a scholarship, or a curated collection. Maybe renting, swapping, or returning.
A vision of thinking in circles. From something already used.

Loop is loop — and back again.

LOOPSHOP.SE – FURNITURE AND INTERIOR SOLUTIONS FOR YOUR WORKPLACE

Welcome to the Götessons Design Group LOOP-shop — a shared platform where you'll find pre-owned products as well as already manufactured products in like-new condition from all brands within the group. These may include products previously displayed in our showrooms, exhibition samples used at trade fairs, or completely new products returned for various reasons.

The assortment is continuously updated and expanded, so make it a habit to check back regularly. We offer fast service and quick deliveries. Purchasing is available for registered businesses only. Scan the QR code to visit loopshop.se.

David Design, now fully integrated into the Götessons range

David Design is now fully integrated into the Götessons range. This means that you can easily order David Design products together with other Götessons products, all in one order and on a single invoice. By integrating product numbers and product data into our business system, we have created a smoother purchasing experience for our customers. At the same time, we are strengthening our combined offering within Götessons Design Group and making it easier to combine products from several of our brands in the same project.

In short, a wider range, easier ordering and even more possibilities for creating complete interior solutions.
