PURPOSEFUL DESIGN FOR MODERN WORKPLACES

SMALL DETAILS THAT

ENHANCE THE EXPERIENCE EVERY DAY

GÖTESSONS

akustikmiljö DAVID DESIGN SCAN SØRLIE

> Throughout the process, we are happy to act as a sounding board – someone to discuss ideas with, test concepts and discover new perspectives together.

When every detail matters

In a well-functioning office, it's not just about furniture, but about how plants, art, acoustics and materials interact. When every element is given space, environments emerge where people feel comfortable, focused and at their best.

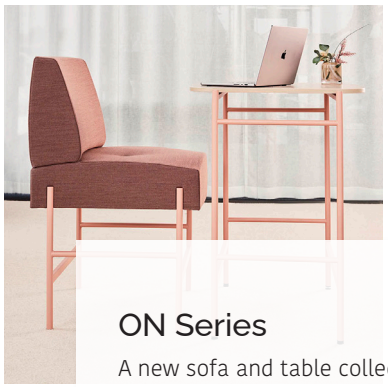

We also know that it's not always easy to visualise how ideas and visions will become reality. That's why we offer support in the form of 3D visualisations, where projects can be drawn up and clarified at an early stage. This provides a clearer understanding of the overall concept and makes it easier to make decisions regarding colour, form, placement and function. Throughout the process, we are happy to act as a sounding board – someone to discuss ideas with, test concepts and explore new perspectives together.

By making use of all the surfaces in a room – from walls to ceilings – we can create solutions that strengthen both expression and function. This is particularly true for the acoustic environment, which plays a crucial role in how a workplace is experienced on a daily basis. Through acoustic measurements and careful calculations, we can determine the number of absorbers required to achieve a comfortable and effective sound environment.

With extensive experience, we help you see the possibilities in every project – from the smallest details to the bigger picture. Because when everything works together, environments are created that make a real difference, every day.

RAL COLOURS

Great emphasis has been placed on good ergonomics and high comfort, ensuring that the furniture supports the body's need for relief without compromising freedom of movement. Because all foam elements are molded, seating comfort is further enhanced compared to conventional cut foam.

Sigurd Strøm,
Designer of the ON Series

ON SOFA

Scan Sørlie launches ON – a new sofa series designed to create inviting and social environments in public spaces. With two different seat heights and multiple widths, ON offers great flexibility for everything from dining areas and cafés to lounge spaces, lobbies, and waiting rooms. It is equally well suited for the office, whether for quick meetings or simpler workstations.

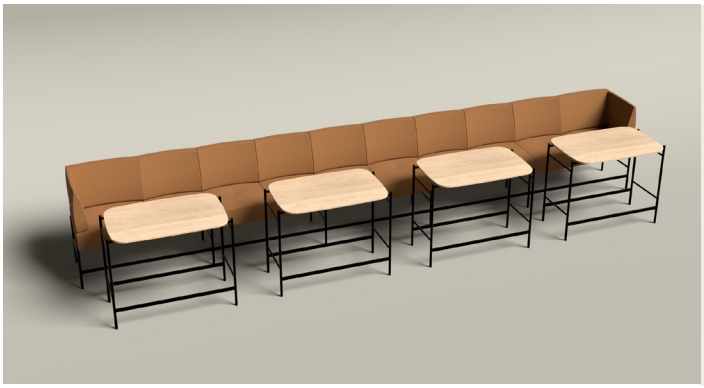

ON is available both as a dining sofa with a seat height of 650 mm and as a lounge sofa with a seat height of 450 mm. Regardless of configuration, the sofa offers high seating comfort, and the well-designed backrest creates an open feel while providing a comfortably embracing experience.

The sofa series is available in several versions – 1-seater, 2-seater, 3-seater, and 4-seater – and is complemented by matching tables in various heights and sizes, creating a well-considered holistic solution where form, function, and flexibility work together. The core idea behind the ON collection is to make it possible to furnish both small spaces and large open areas. Therefore, connecting modules are available, allowing the elements to be seamlessly linked together in endless configurations.

TIP! EXTEND YOUR SOFA

With connecting modules, the 4-seater sofa can be extended to any width, allowing you to create flexible and tailored seating solutions. Contact us and we'll guide you to the right solution based on your needs.

TABLETOP IN HPL, NANO OR LAMINATE

The ON tables are a natural complement to the ON sofas. A clean, minimalist table with softly rounded corners that contributes to an inviting and harmonious expression. The powder-coated metal base provides a stable and durable experience, designed for public environments.

SCREENIT TERRA

ScreenIT Terra is an exclusive version of our A30 screen, designed with solid wood trims at both the top and bottom to create a refined, premium expression. It offers the same excellent acoustic performance as our classic A30 screen. The trims are made of solid oak or ash and come pre-assembled on the screen. Nothing complicated – just a carefully considered detail that elevates both the look and feel of the workspace.

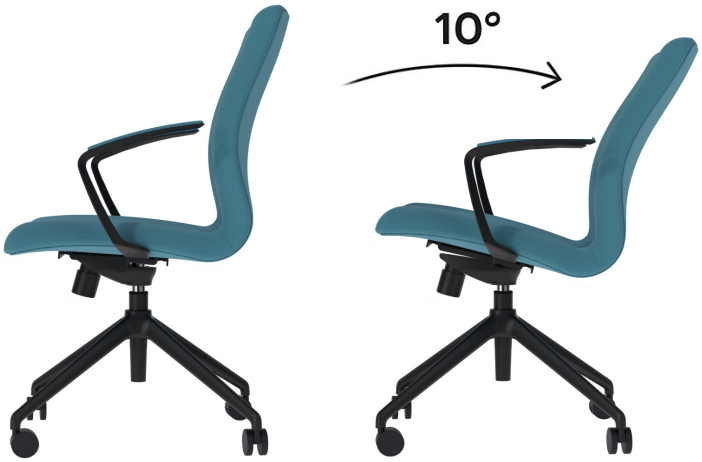

Even better seating comfort with Tekla Executive

To provide even better seating comfort, we have replaced the mechanism in the base of Tekla Executive. The new function allows the rocking resistance to be adjusted so that the chair adapts to the user's weight. It also offers a greater tilt range than before and can additionally be locked in the starting position.

The new mechanism is available for the Superleggera and Trevi cross bases (excluding models with gliders and auto-return) and is offered exclusively for the Executive model – one of five upholstery pattern designs. Executive is a more premium variant, featuring additional padding and elegant quilting.

FACTS

Client: Interstuhl Büromöbel GmbH
Location: Tieringen, Germany
Number of employees: 850
Completed: 2025
Products: Off the Grid, Slice Panel, Plain Panel, artificial plants

When sound, design and nature work together

Interstuhl Büromöbel GmbH in Tieringen, Germany, is a family-owned company with strong roots in its local community and a clear focus on people in working life. With more than 850 employees and over 30 million chairs produced, Interstuhl has long been a driving force in creating sustainable and ergonomic work environments.

When the company developed new workspaces in 2025, the objective was clear: to improve the acoustic environment, create areas for wellbeing and collaboration, and integrate biophilic elements that enhance comfort and job satisfaction. The result is a modern workplace where function, aesthetics and human needs come together.

To meet the project's requirements, Götessons delivered a combination of acoustic solutions and visual elements. Products such as Off the Grid, Slice Panel and Plain Panel contribute to effective sound absorption and clear zoning, while artificial plants add a green, vibrant expression without the need for maintenance. Together, the solutions create a balanced environment that supports both focused work and collaboration.

The project demonstrates how well-considered acoustic solutions and biophilic elements can strengthen both the working environment and the overall experience. A workplace where people thrive, feel good and are given the right conditions to grow – in line with Interstuhl's long-term vision of continuously improving the working world in a sustainable way.

Seasonal Bouquet

A flower arrangement that never withers – our Seasonal Bouquet features carefully selected flowers, equally suited for the home, entrance areas, dining rooms, lobbies or offices. The bouquet vary over seasons.

Size – Generous comfort in a refined design

Size from Scan Sørlie is an inviting lounge chair with a clear focus on comfort and flexibility. With several base options and the possibility of a headrest, the chair can be adapted to both expression and function. The softly shaped seat provides a comfortable seating experience, whether the chair is placed as a standalone piece in a quiet zone or grouped for social interaction. Size is equally well suited for lounge areas, waiting rooms and receptions, as well as shared office spaces – where design and relaxation come together.

UPDATES IN OUR LAMINATES

When you buy a Sit Around table from Götessons, you can choose from several laminate options for the tabletop. Laminates are also used in the wood details of our Moving Wall series, in the base of the Sandy sofa, and on the Sandy table. The Hut GEM also features a laminated tabletop.

The biggest change in our updated laminate range is that the black laminate now has a pronounced wood texture, giving it a more natural expression. The walnut laminate has also been adjusted and is now slightly lighter. It is important to be aware that new and older versions may differ in appearance when compared side by side.

When there is room for something extra

Talking about luxury can sometimes feel out of place in times marked by global and economic uncertainty. Yet it is precisely in such times that wellbeing, security and small, thoughtful details become even more important. Treating yourself – when there is room for it – is not about excess, but about creating environments where people feel comfortable and well. Often, it is that little extra that makes a difference in everyday life, fostering pride, encouraging employees to stay and supporting personal development. In the long run, this also contributes to something even more important: long-term sustainability and profitability.

CASA UNO

Welcome to a quieter room within the room. Casa Uno is a phone booth for one person seeking privacy for an important phone call or focused work. It features a fixed table for your laptop, power and charging outlets, comfortable dimmable lighting and more.

WING

A combined storage and screening solution built from different modules. The modular shelving system is ideally placed in open-plan offices, close to workstations..

TEKLA ROUND CONFERENCE TABLE

The Tekla round conference table is the perfect meeting table when you want to create a sense of togetherness in the conference room. Round tables contribute to an inclusive atmosphere.

Secure your project with a visual offering

Our 3D offering is based on carefully selected products that together contribute to both a good acoustic environment and an aesthetically appealing expression. By visualising solutions at an early stage, we create a clear understanding of how form, function and acoustics interact in the finished environment.

With our project support, we bring simplicity and transparency throughout the entire process. We free up time for our customers while contributing specialist expertise in both acoustics and interior design. Acting as an active sounding board, we help identify opportunities, solve challenges and move projects forward.

Our experience shows that 3D sketches make a real difference. When ideas are visualised, decision-making becomes faster, dialogue clearer and project completion quicker. Many customers also find that both enquiries and conversion rates increase when 3D material is used as support throughout the process.

With a broad product portfolio and strong opportunities for customisation, it is rare that we cannot find a solution that meets the needs of the project. Our goal is to create confidence, momentum and quality – from the first idea to the finished environment.

When the project was visualised, additional opportunities to enhance comfort and wellbeing became clear.

Jonas Wetterholm,
Project leader Nivika Fastigheter

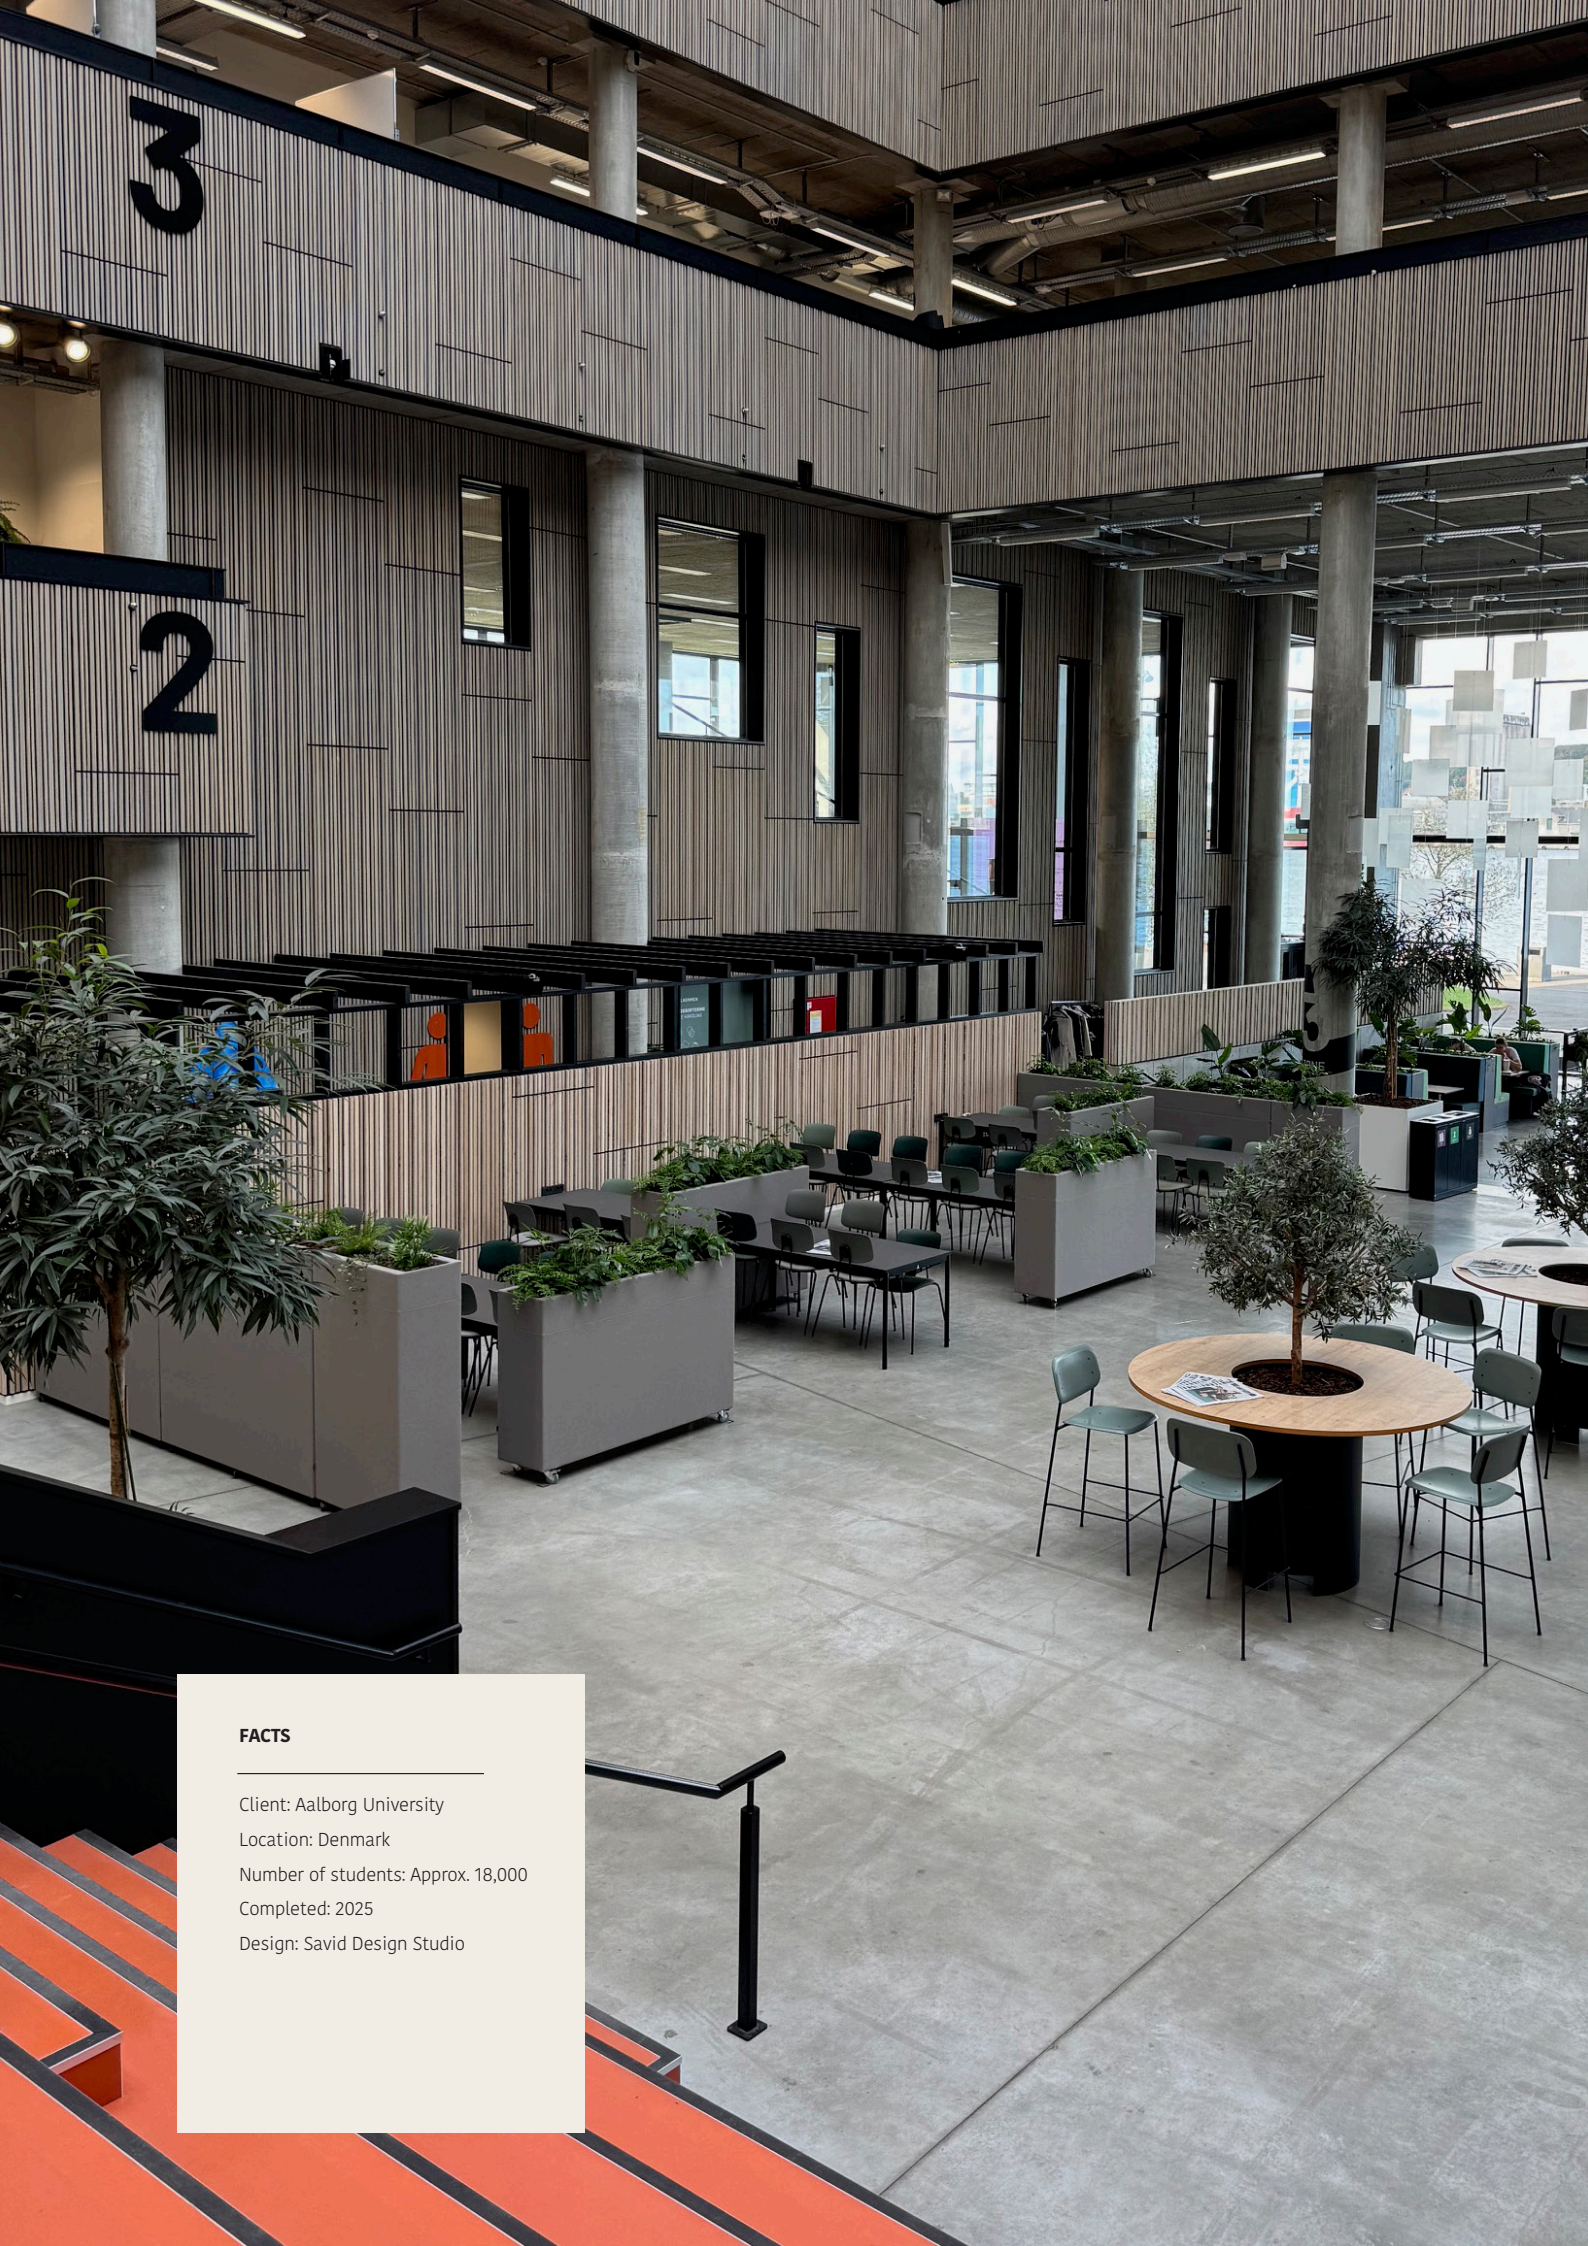

THE BENEFITS OF VISUALISING YOUR PROJECT

- Discover new possibilities
- Benefit from expertise in both acoustics and interior design
- Reach decisions and project completion faster
- Minimise the risk of misunderstandings between results and expectations
- Simplifies installation

FACTS

Client: Aalborg University

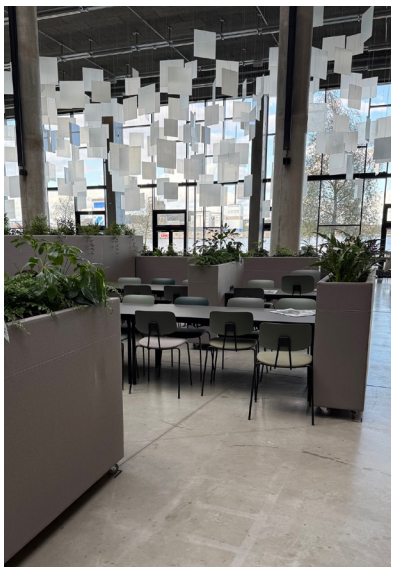

Location: Denmark

Number of students: Approx. 18,000

Completed: 2025

Design: Savid Design Studio

Green space division in an open dining environment

In the dining area at Aalborg University, students and staff meet every day for meals, breaks and spontaneous conversations. It is a natural gathering place with a lively atmosphere and constant movement – placing high demands on acoustics, circulation and overall comfort. Here, Götessons has contributed to a more pleasant environment through smart space division using greenery.

For the project, Götessons supplied 50 Plant Dividers with plants that function as natural separators between seating areas in the dining hall. The dividers create clear zones and provide each group with its own space, while preserving the open feel of the room. The textile-covered planters also contribute to effective sound absorption – an important factor in a busy dining environment where many conversations take place simultaneously.

The greenery adds softness and visual warmth to the otherwise restrained architecture, creating a more inviting place to spend time. The result is a dining area where function, acoustics and aesthetics work together to create a calmer, more pleasant and social environment.

BAG

Bag is a portable seating pouf designed to go wherever you go. A leather handle makes Bag suitable for both home environments and public spaces.

SMS-BOX

One of Götessons' first seating solutions, with a name that stands for Sit – Meet – Store. A practical piece of furniture that should be present at every workstation. The product has been updated, and the zipper has now been removed.

The coffee corner – maybe the office's most important meeting place

A coffee corner with a comfortable sofa quickly becomes the office's natural gathering point – a place for coffee, conversations and recovery. With soft furniture, warm colours, textiles and a calm acoustic environment, a relaxed atmosphere is created that differs from the work areas. The sofa invites spontaneous meetings and informal conversations, while lighting and greenery enhance the homely feel.

SCAN SØRLIE DAVID DESIGN

Designing calm in a demanding healthcare environment

In connection with the renovation of the shared staff areas at Klinikum Solingen, the focus has been on creating an environment that not only functions practically, but also supports wellbeing, recovery and job satisfaction. As one of the region's leading hospitals, with a high level of specialisation and modern medical technology, the working environment is an important part of the overall experience for both staff and patients.

In collaboration with Götessons, the staff areas have been given a new, softer character where acoustics, aesthetics and function work together. With Slice Panel, Divido and printed panels, the acoustic environment has been improved while giving the spaces a clear visual identity. The result is social areas that feel calm, welcoming and homely, despite the intense healthcare environment surrounding them.

Klinikum Solingen continuously works to develop both quality of care and patient-focused service. Their goal is to make every stay as safe, comfortable and successful as possible – for patients as well as for the staff who make a difference every day. The new design of the staff areas is a clear example of how thoughtful interior design can contribute to wellbeing and a sustainable working environment.

Storage, screening and sound absorption in an elegant combination

Create order and structure with smart storage solutions featuring sound-absorbing properties. Thanks to thoughtful design elements such as discreet cable management, space for a TV screen, whiteboard and power outlets, these solutions meet the needs of many different environments. Screen off areas, create rooms within rooms, move them easily thanks to castors, or build a meeting environment with storage as the central element. Creative spaces see the possibilities.

Accessories that add the finishing touch to the screen

Since 2010, Götessons has supplied desk screens to offices and workplaces across Europe. There is a wide range of screen models, as well as a broad selection of accessories that help you create order and structure at the workstation.

A tidy desk makes the workday both more pleasant and more efficient. At the same time, it's not always obvious where papers, pens and other small items should go. Fortunately, there are plenty of smart accessories that help keep everything in place – from pen holders and document holders to hooks and other practical solutions.

It is often the small details that provide that extra touch and make the workplace feel more considered. An additional advantage of our accessories is that most of them are kept in stock, allowing for fast delivery within 2–5 working days.
