

Colleges & Universities

When it comes to protecting commercial roofs on college and university facilities, there's no better lesson than an edge metal system from Hickman Edge Systems. The perimeter edge metal system serves as the roof's first line of defense when it comes to protection against wind and water infiltration. We offer the industry's widest selection of ANSI/SPRI/FM 4435/ES-1 tested and approved edge metal systems for low sloped roofs including fascia, coping, wa-ter control systems, and custom edge products. We also have extensive experience working with specifiers of college and university facilities. Below is a representative list of our college and university facility projects.

Arizona State University
Brown University
Bryant College
Bryn Mawr College
California State University
Carnegie Mellon University
Central Michigan University
Colorado Christian University
Cornell University
Dartmouth College
East Carolina University
