

**Building Information
Modelling.
More than just a model.**

fischer BIM Engineering Services.

Benefit from our expertise to get the most out of your construction project.

BIM as a process of design, management and use of digital representations of a building can be a challenging task. Our BIM Engineering services will help you to take control of these processes and to get the most out of BIM: Reduce costs by improving the flow of information as well as the quality – from design through

construction to use and maintenance of the building. We look forward to your enquiry and will be happy to support you with professional engineering in your projects.

fischer BIM Engineering

With our engineers in over 40 countries, planners have access to experienced professionals in order to receive services for your project that go beyond the common standard. The services range from consulting and calculating over BIM modelling in e.g. Autodesk REVIT to services with scanner and RTS in Field to BIM

and BIM to Field. With fischer BIM Engineering, we meet all the customers' needs and create the basis for a successful project completion.

Let's find out together which services are the right ones for your project!

More than just a model.

Planning tools for engineers

All our fischer products are available in BIM files (RVT, RFA, IFC, etc.) and equipped with the basic BIM attributes. This enables the conception and digital presentation of our products. We provide this service free of charge on our Website.

BIM Engineering

From conceptual design to the maximum level of detailed modeling (LOD 500), we provide continuous service and engineering at every design stage to ensure a smooth BIM workflow. From fixings to installation systems in MEP and rain screen façade subframes.

3D-Scanning, Field to BIM

If refurbishment or extension measures are to be planned, 3D measurements are the ideal base for a precise modelling to save costs later at the construction site. fischer provides full 3D scanning services, including point cloud analyses and As-built documentation.

BIM to Field on site service

Precise positioning of drill holes or pre-assembled parts has never been easier than with our BIM to field support. Project the parts from the 3D model directly onto the construction site with pinpoint accuracy and make adjustments directly on site.
