Pebble by Joel Karlsson at restaurant Cirkeln

Our company is built on simple values and strong beliefs. We produce quality products by hand in our local factory, with a sincere intention to leave the best possible mark on our planet.

Örsjö is more than a name, it's the place where it all started — a small village located just outside Nybro in the eastern parts of Småland, Sweden. For over 70 years, until this day, we've been convinced that local, small scaled production is the key to be able to make quality products on fair grounds. As a family owned business we're proud to be true to our roots and we still produce our lights in our own factory. Rooted in local craftsmanship, our products are created with meticulous eyes and mindful hands.

We've put down a lot of work towards sustainability in both the design and production. By for instance using sustainable materials and dimmensions, producing locally and construct for easy recycling were are able to limit the impact we make on the environment. In the end it's very easy, we just want the products to outlive ourselves and leave the best possible mark on peoples life.

For more information about us and our products, please visit our website at www.orsjo.com
