FASTENERS FOR FLAT ROOF  
THERMAL INSULATION AND  
WATERPROOFING SYSTEM

Wkręt-met  
KLIMAS

POLISH  
PRODUCER

# KLIMAS

Production plant no. 2 and central warehouse - total area of 30,000 m<sup>2</sup>  
New investment: plants no. 3 and 4 - total area of 30,000 m<sup>2</sup>

Production plant no. 1 - total area of 20,000 m<sup>2</sup>

# 4

PRODUCTION AND  
STORAGE FACILITIES  
OF TOTAL AREA OF

# 80 000 m<sup>2</sup>

Production of Klimas Wkręt-met fastening technologies is held in 4 modern facilities, located in Kuźnica Kiedrzyńska and Wanaty near Częstochowa. The Company has launched production in its third facility in Wanaty which, with use of state-of-the-art technologies and applications, implements the assumptions of the Industry 4.0. programme.

## PRODUCTION PROCESS OF STEEL PRODUCTS:

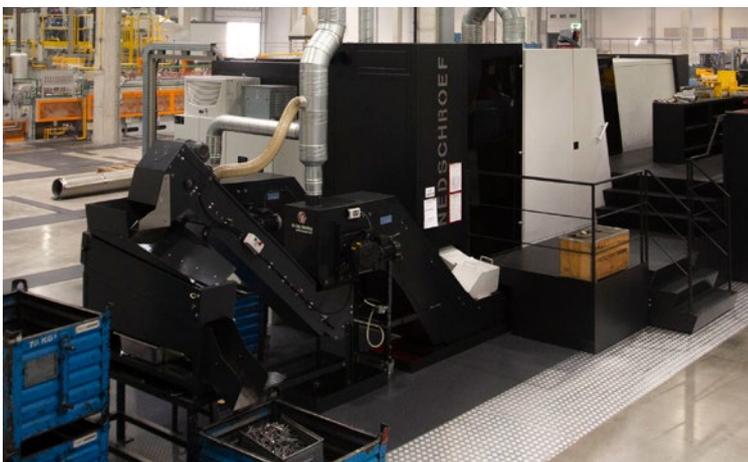

- Top-quality raw-material from European steelworks.
- Various steel grades.
- Own RGD department.
- Extensive machine park.
- Hardening (heat treatment).
- Application of protective coats.
- Possibility of painting heads and washers to RAL colours.
- Quality control at each production stage.
- Polish and European technical assessments.

WE PRODUCE

30 000 000 pcs. of SCREWS DAILY

Production plant no. 1 - total area of 20.000 m<sup>2</sup>

## OWN PRODUCTION OF FASTENER TECHNOLOGIES

PRODUCTS DEVELOPED BY R&D  
WIDE RANGE OF SIZES  
TOP QUALITY

MORE THAN

# 400

## MODERN MACHINES

- Highest quality production materials.
- Appropriate flexibility is guaranteed by conditioning of polyamide products.
- Own production using the highest quality hybrid injection moulding machines with robots.
- Automatic packing process: from carton/blister to pallet wrapping.

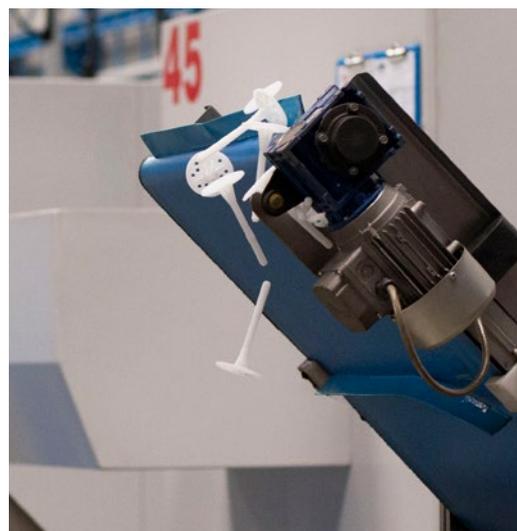

WE PRODUCE

9 000 000

pcs. of PLASTIC FASTENERS DAILY

Production plant no. 2 and central warehouse - total area of 30,000 m<sup>2</sup>

## OWN PRODUCTION OF FASTENER TECHNOLOGIES

PRODUCTS DEVELOPED BY R&D  
WIDE RANGE OF SIZES  
TOP QUALITY

MORE THAN

120

**STATE-OF-THE-ART INJECTION MOULDERS**

## PROCESS OF SCREW HARDENING:

- Advanced machine park including 7 hardening furnaces.
- 2 modern furnaces for hardening of screws over 200 mm long while keeping high quality of parameters – no curvature.
- Automated hardening line – high capacity.

WE HARDEN

**21 000 000** pcs. of SCREWS  
DAILY

## CUSTOM COATING

### White Zinc

Zinc coating guarantee of quality and high level of anti-corrosion protection.

### Yellow Zinc

Zinc coating guarantee of quality and high level of anti-corrosion protection.

### SQ Ceramic

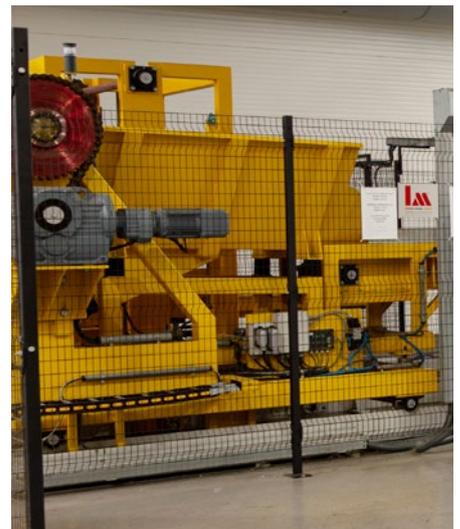

Very high level of anti-corrosion protection (several times higher than the traditional galvanization).

Advanced machine park: **ZN yellow without CR6+**.

Advanced processing line for SQ Ceramic coating.

Automatic passivation and top coat line.

State-of-the-art robots and baths for sealing of coating.

## ADVANCED PROCESSING LINE – HARDENING PLANT AND GALVANIZING LINE DEPARTMENT

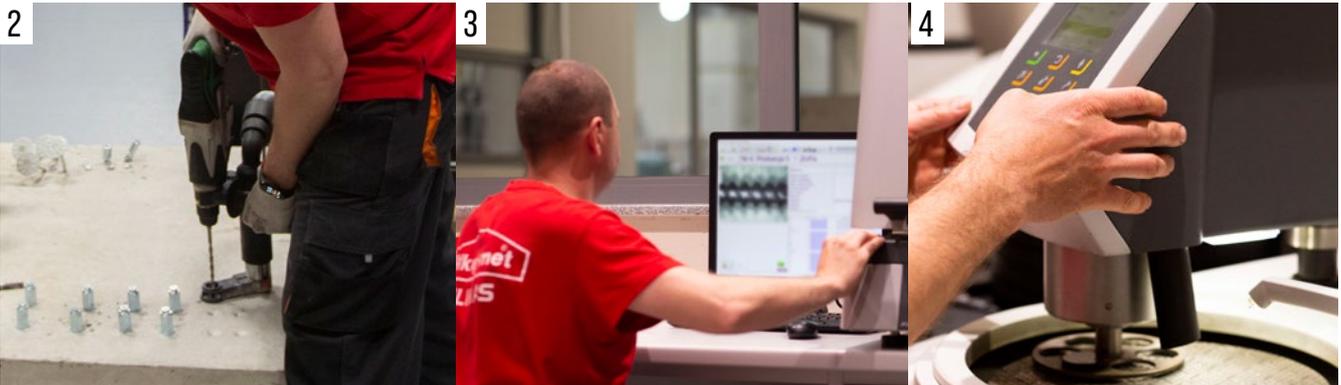

PRECISION  
HIGH QUALITY  
HIGH PRODUCTION CAPACITY

## HARDENING FURNACES

1

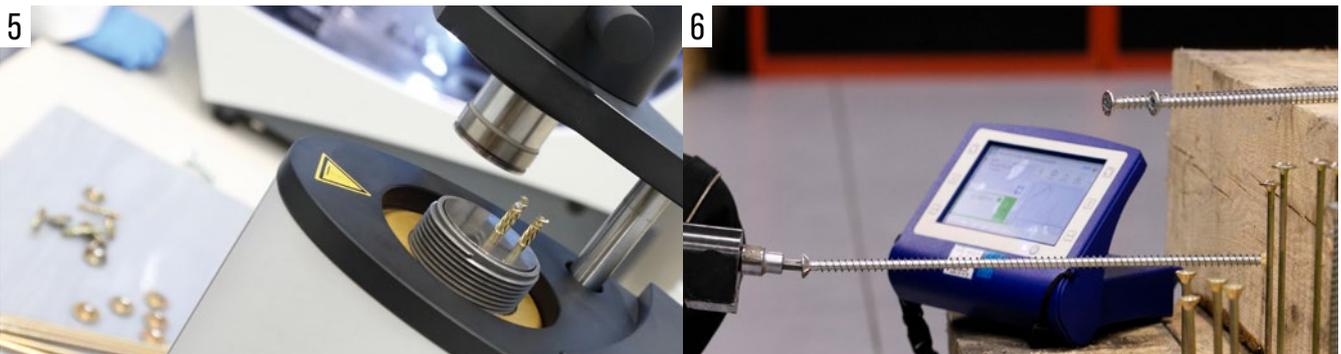

1. Hardness and micro Vickers hardness testing. | 2. Assembly and load-resistance tests for all substrate categories according to ETAG. | 3. Testing thickness of corrosion protection plating using X-ray fluorescence spectroscopy tester - Fischerscope X-RAY XDL. Analysis of chemical composition of alloy steels. | 4. Preparation of metallographic micro-sections - metallographic tests. | 5. Preparation of metallographic micro-sections - metallographic tests. | 6. Torque value testing | 7. Determination of tensile strength for wire and finished goods. | 8. Metallographic tests - control of thermal and chemical treatment process, hardness, structure. | 9. Testing of corrosion resistance in salt spray/cyclic chamber. | 10. Accelerated ageing of paint coats in UV chamber. | 11. Testing of loading resistance of fasteners - characteristic pull-out strength.

FASTENER TECHNOLOGIES

## BRAND MOST FREQUENTLY CHOSEN BY CONTRACTORS IN POLAND\*

\*according to annual research of ASM  
- Centre for Market Research and Analysis (2020)

### Certified products - 21 European Technical Approvals and 21 Polish Technical Approvals

Our products regularly receive Polish and European technical approvals what proves their reliability. Due to these documents Polish and foreign Clients obtain a guarantee of the highest quality of Klimas Wkręt-met brand products.

### Technical advisory

Caring about the Client's comfort, we ensure the assistance of technical advisors in the selection of our products. Persons interested in our offer may always count on the professional support in the selection of fastening systems adequate to the needs of the Client and requirements of the specific construction.

### Partnership

Our company is set on continuous improvement of its production control processes at each stage of manufacture. We wish to provide our customers with services of the highest possible standard.

### Our company offers products that find application in many different industries

Specialised sections of products reach many selected groups of customers who value and appreciate their reliability.

Klimas Wkręt-met undertakes cooperation with companies from various industries using products marked with our brand. Thus, for example, thanks to cooperation with window producers we deliver them high quality products used by them in the production process – and in return we receive the knowledge necessary for enhancing our products and developing brand new innovative products by Klimas Wkręt-met that perfectly fit the needs of a given industry or field.

### Integrated Management System

Quality Management System according to PN-EN ISO 9001.

OH&S Management System according to PN-EN ISO 45001.

Energy Management System according to PN-EN ISO 50001.

### Construction Brand of the Year 2021

For the 9th time, Klimas Wkręt-met won the most prestigious title on the market of building materials in Poland.

### Forbes Diamond Award 2021

Klimas Wkręt-met has been awarded with Forbes Diamond 2021. According to the ranking compiled by Forbes Magazine and Bisnode Polska, the producer of fastening techniques dynamically increased its sales value in the last three years.

### Statuettes of the Polish Windows and Doors Association

The Polish Windows and Doors Association awarded Klimas Wkręt-met for its achievements in the woodwork industry. The Association also awarded the prestigious title of Honorary Member to the founder and President of the company - Wojciech Klimas.

### Construction Company of the Year

The editors and the Program Council of the "Builder" magazine once more awarded Klimas Wkręt-met the title of Construction Company of the Year. The distinction is awarded to companies characterized by dynamic development and strong market position. This title aims at selecting the most outstanding companies in the country, their promotion and popularization of good business practices.

### Creator of Construction 2020

For 9 years now, the Polish Chamber of Civil Engineers has been distinguishing individuals and companies that shape the construction market with their activities, introduce new technologies and innovative solutions, as well as take care of the quality of products and services offered and can be proud of their CSR activities. The title of the Creator of Construction 2019 went to President Wojciech Klimas, as well as to the entire Klimas Wkręt-met company.

### SSO - Association for External Thermal Insulation Composite Systems - ETICS

Membership in the Association for Thermal Insulation composite systems allows us to actively contribute to the development of energy efficient and sustainable construction industry. The Association unites the leading manufacturers of thermal insulation composite systems in Poland.

**STOWARZYSZENIE  
 DOM  
 DREWNIANY**

### SDD - Wooden House Association

One of product categories carried by Klimas Wkręt-met are fasteners for wooden constructions that work great in the wooden construction industry. That is why, since 2014, the company has been a member of the Wooden House Association which promotes wood as an environmentally friendly material and gathers all stakeholders interested in the subject of wooden houses. A significant goal of the organization is to take up activities aimed at improving the quality of houses made of wood.

**Business Centre  
 Club**

### BCC - Business Centre Club

The Klimas Wkręt-met company has been awarded the European Medal. The award was granted by the largest organization of individual employers in the country - Business Center Club. Awards were granted by the Business Center Club on June 12th this year at Warsaw headquarter placed in the Lubomirski Palace. It was the final of the 30th edition of the event. Among the guests were European Medal winners, honorary winners, Chancellors of the BCC Regional Lodge and the representatives of the European Economic and Social Committee.

### PRODUCT INDEX

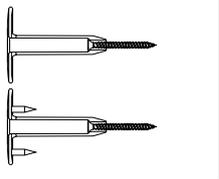

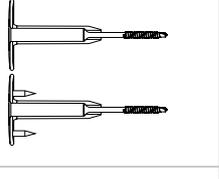

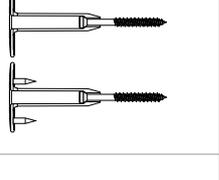

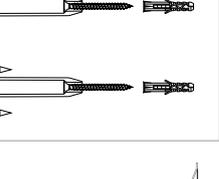

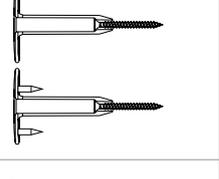

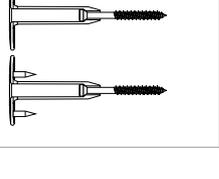

#### FASTENERS FOR FLAT ROOF THERMAL INSULATION AND WATERPROOFING SYSTEM

TYPE	PRODUCT NAME	page
LINO 13	 ø 13 plastic sleeve NYLON	22
LINO K 13	 ø 13 plastic sleeve with spiker (extra holding power) NYLON	24
WDB-T-4,8	 Self-tapping fastener for profiled roof sheets of 0,50 - 0,75 mm in thickness and wooden substrate	26
WSR-T-4,8	 Self-drilling fastener for profiled roof sheets of 0,5 - 1,25 mm thickness	28
WBSW-6,3	 Self-tapping fastener for concrete and wooden substrate	30
WBG-D	 Self-tapping fastener for concrete substrates	32
KD-04-W5 KD-05 KD-01 KD-02-W-5,5 KD-07-WW	 Steel washers - round	34
KD-03-P KD-03-W5 KD-03-W7 KD-03-W9 KD-03-WW7	 Steel washers - oval	35
SMN-6x50/SMN-8x60	 Expansion plug NYLON	36
KNX-8x50	 Plastic sleeve plug for concrete substrates NYLON (to be combined with WDB-T fastener)	37
FBZ	 Vapour barrier foil	38

## Installation accessories

KLIMAS

**Plastic sleeve Ø 13 for fixing of flat roof thermal insulation and waterproofing systems**

# LINO 13

Ø 13

Plastic sleeve for fixing of flat roof thermal insulation and waterproofing systems to be used with self-tapping or self-drilling fasteners.

ETA-15/0578

## SUBSTRATES (ETAG 006)

**Substrate: steel sheets**  
profile of 0,50 - 1,25 mm  
in thickness

**Substrate: concrete C12/15,**  
C20/25, thin concrete slabs

**Wooden substrate: timber**  
C24, OSB board, plywood

<b>SLEEVE MATERIAL</b>	Poliamid (Nylon)
<b>COMPATIBLE FASTENER TYPES AND DIAMETERS</b>	WDB-T-4,8 mm, WSR-T-4,8 mm, WBSW-6,3 mm
<b>APPLICATION</b>	<ul style="list-style-type: none"> <li>For fixing thermal insulation type: EPS; XPS; MW; PIR; PUR</li> <li>For fixing waterproofing type: PVC; TPO/ FPO; EPDM and bituminous membrane for all substrates</li> </ul>

### NYLON

Nylon body made of top quality plastic materials.

### TELESCOPIC DESIGN

Telescopic design prevents damage to waterproofing systems; fastener's internal air pocket reduces the effect of thermal bridging.

### SPECIAL PROTRUSIONS

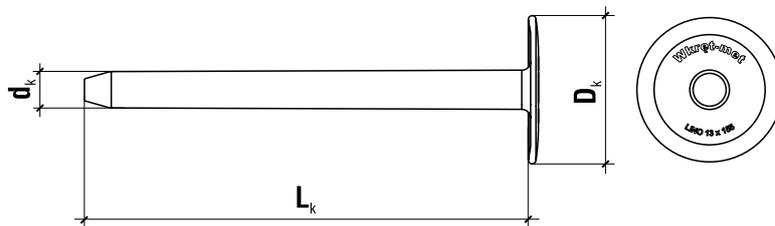

Special protrusions on the inside of the fastener prevent the fastener from popping up.

### PRODUCT MARKING

Easy to identify.

Poliamid (Nylon)

• Introduction 44 - 48

## INTRODUCTION

### Fastening of flat roof thermal insulation and waterproofing systems

#### I. Basic information

Roof slopes are exposed to weathering including:

- wind load – wind-induced suction, shearing force, bending force
- exposure to rain – rainfall
- snow load
- exposure to the sun – UV radiation

To prevent damage which is likely to occur on flat roofs it is essential that membrane and layers of thermal insulation materials be installed correctly.

Correct installation of thermal insulation and waterproofing materials for flat roofs requires suitable fixings to be used on a given roof surface. It is also very important to apply appropriate fastener number and spacing in particular roof zones.

#### II. Flat roof zones

It is essential to use the appropriate number of fixings for particular roof zones of a structure, which always depends on the wind zone, structure's height and surroundings.

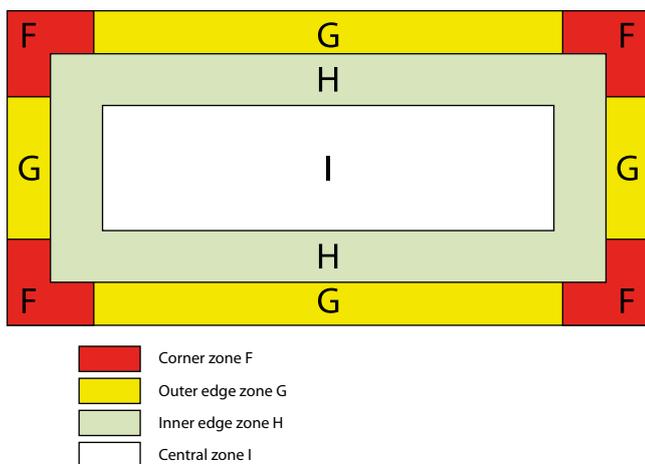

Fig. 1 Flat roof zones

Roof slope can be divided into four zones:

- corner zone
- outer and inner edge zones
- central zone.

The appropriate number of fixings for particular zones will ensure fault-free and reliable roofing. Using too few fixings might result in the waterproofing membrane being damaged or even blown off.

The appropriate number of fixings should be calculated according to the wind actions standard PN-EN-1991-1-4:2008 (based on Eurocode 1)

#### III. Requirements for fasteners

According to the guidelines provided by ETAG 006 for fasteners for mechanical fixing of flat roof thermal insulation and waterproofing systems, fasteners must meet the following conditions:

- pull-out resistance,
- resistance to self-unfastening of the fastener from the decking made from profiled roof sheets,
- resistance to corrosion according to Kesternich test (min. 15 cycles, DIN 500 2.0 S standard),
- fastener impact resistance.

According to guidelines the following fixing methods with roof fasteners can be applied:

- telescopic fixing (plastic sleeve + self-drilling or self-tapping fastener) – for flat roofs with thermal insulation systems,
- rigid fixing (steel washer + fastener) – for flat roofs without thermal insulation (for waterproofing systems only).

#### IV. Flat roof substrates

Guidelines for the use of roof fasteners provide for testing of the following substrates:

- profiled sheeting with thickness of 0.5 - 0.75 mm
- profiled sheeting with thickness of over 0.5 - 1.00, max. 2 x 1.25 mm,
- concrete decking (concrete, lightweight concrete slabs),
- timber boarding (timber, plywood, OSB).

Resistance parameters for roof decking are specified in technical approvals or guidelines provided by manufacturer.

Application of fasteners that meet all the above-listed requirements and conditions will allow for long-lasting and reliable serviceability of a structure.

#### V. Installation recommendations

In order to correctly install fasteners it is important to choose appropriate power tools with an adjustable clutch, drills and driver bits of a suitable diameter.

#### VI. Calculation methods for flat roof loads

Correct calculation of the loads acting on particular zones of the flat roof

should be based on relevant standards and regulations. All the necessary information on wind-induced suction values is provided in the PN-EN 199-1-4:2008 standard "wind actions.." – the standard divides the area of Poland into three wind zones. One of the coefficients necessary for the calculations is the basic wind speed, whose values will vary for different locations of a structure within a given zone.

Fig. 2. Map of wind zones in Poland

Table 1. Basic wind speed

Strefa	$v_{b,0}$ [m/s]	$v_{b,0}$ [m/s]	$q_{b,0}$ [kN/m <sup>2</sup> ]	$q_{b,0}$ [kN/m <sup>2</sup> ]
	A ≤ 300 m	A > 300 m	A ≤ 300 m	A > 300 m
1	22	$22 \times [1 + 0,0006 (A - 300)]$	0,30	$0,30 \times [1 + 0,0006 (A - 300)]^2$
2	26	26	0,42	0,42
3	22	$22 \times [1 + 0,0006 (A - 300)]$	0,30	$0,30 \times [1 + 0,0006 (A - 300)]^2 \times \left[ \frac{20000 - A}{20000 + A} \right]$

$v_{b,0}$  – basic wind speed (m)

$q_{b,0}$  – fundamental value of wind speed pressure (m)

Note: A – height above sea level (m)

Tab 2. Terrain categories

Terrain categories and parameters	
	<p><b>TERRAIN CATEGORY 0</b> Sea, costal area exposed to the sea</p>
	<p><b>TERRAIN CATEGORY I</b> Lakes or areas with negligible vegetation and no obstacles</p>
	<p><b>TERRAIN CATEGORY II</b> Terrain with low vegetation, such as grass, and isolated obstacles (trees, buildings) spaced at least 20 times their height</p>
	<p><b>TERRAIN CATEGORY III</b> Terrain covered with regular vegetation or buildings or with isolated obstacles spaced no more than 20 times their height (rural, suburban and wooded areas)</p>
	<p><b>TERRAIN CATEGORY IV</b> Terrain in which at least 15% of the surface is covered with buildings of average height exceeding 15 m</p>

Tab 3. Flat roofs - external pressure coefficient

Roof type		Column							
		F		G		H		I	
		$C_{pe,10}$	$C_{pe,1}$	$C_{pe,10}$	$C_{pe,1}$	$C_{pe,10}$	$C_{pe,1}$	$C_{pe,10}$	$C_{pe,1}$
Featheredge roof		-1,8	-2,5	-1,2	-2,0	-0,7	-1,2	+0,2	+0,2
Attic-style roof	$h_g/h=0,025$	-1,6	-2,2	-1,1	-1,8	-0,7	-1,2	+0,2	-0,2
	$h_g/h=0,05$	-1,4	-2,0	-0,9	-1,6	-0,7	-1,2	+0,2	-0,2
	$h_g/h=0,10$	-1,2	-1,8	-0,8	-1,4	-0,7	-1,2	+0,2	-0,2
	Rounded edge roof	$rlh=0,05$	-1,0	-1,5	-1,2	-1,8	-0,4	+0,2	-0,2
		$rlh=0,10$	-0,7	-1,2	-0,8	-1,4	-0,3	+0,2	-0,2
		$rlh=0,20$	-0,5	-0,8	-0,5	-0,8	-0,3	+0,2	-0,2
Mansard roof	$\alpha=30^\circ$	-1,0	-1,5	-1,0	-1,5	-0,3	+0,2	-0,2	
	$\alpha=45^\circ$	-1,2	-1,8	-1,3	-1,9	-0,4	+0,2	-0,2	
	$\alpha=60^\circ$	-1,3	-1,9	-1,3	-1,9	-0,5	+0,2	-0,2	

NOTE 1. For attic roofs or roofs with rounded edges you can use linear interpolation for intermediate values  $h_g/h$  and  $rlh$

NOTE 2. For mansard roofs you can use linear interpolation between  $\alpha=30^\circ$ ,  $45^\circ$  and  $\alpha=60^\circ$ . If  $\alpha>60^\circ$ , you can use linear interpolation between values given for  $\alpha=60^\circ$  and values given for flat roofs with sharp edges.

NOTE 3. In column I, where positive and negative values are given, both should be considered.

NOTE 4. External pressure coefficient for mansards only is shown in Table 7.4a. "External pressure coefficients for gable roofs with wind direction  $0^\circ$ "; columns F and G depend on the inclination angle of the mansard edge.

NOTE 5. For rounded edges only external pressure coefficients are calculated from linear interpolation along the rounding, between the values on the wall and on the roof.

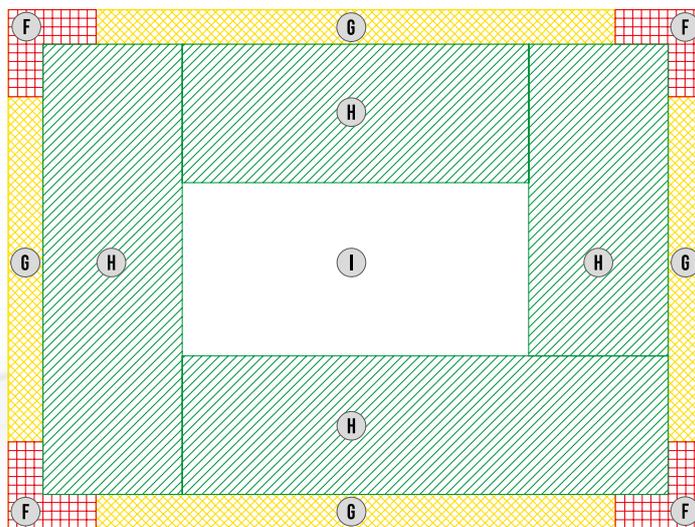

# DEDICATED PROGRAM FOR THE NUMBER OF FASTENERS ON FLAT ROOFS - MF DATENTECHNIK

## MF Dach

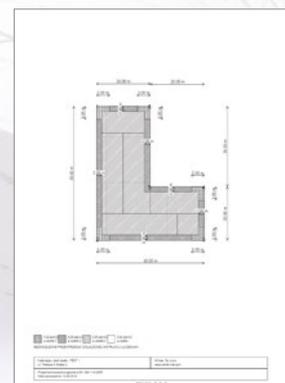

Ihre Software fürs Handwerk

- Universal program to optimize the number of fasteners on flat roofs.
- The program is based on the ETAG 006 guidelines and the standard for wind action on structures - PN EN 1991-1-4, Eurocode 1.
- The program takes into account all the requirements of the wind standard.
- Enables the introduction of all technical data of the facility and the materials used in the calculations.
- Automatic division of the flat roof plane into zones with their graphic presentation.

MF DATENTECHNIK - diagram of the division of a flat roof plane into wind zones

ZONE F - Corner zone	pcs/m <sup>2</sup>	
ZONE G - Outer zone	pcs/m <sup>2</sup>

##### PULL-OUT RESISTANCE [kN]

Substrate		KD + WBSW
Characteristic resistance [kN]		
Timber C24 EN 14081	th 30 mm	3,04
OSB board EN 300	th 18 mm	1,68
Plywood EN 313	th 20 mm	3,30
Design resistance [kN] $\gamma M=2.0^{**}$		
Timber C24 EN 14081	th 30 mm	1,52
OSB board EN 300	th 18 mm	0,84
Plywood EN 313	th 20 mm	1,65

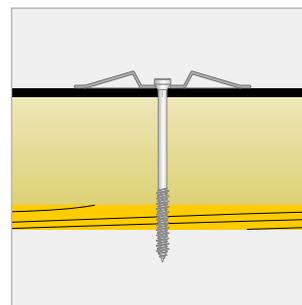

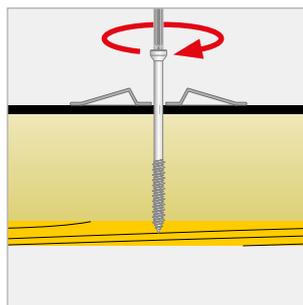

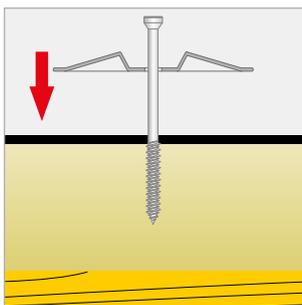

\* - timber C24/OSB board/plywood

\*\* - national safety factor shall be applied, in its absence apply 2.0

##### SUBSTRATE, MINIMUM THICKNESS, DISTANCE

Substrate	Min. timber thickness $h_{min}$ [mm]	Min. edge distance $c_{min}$ [mm]	Min. spacing $L_{os}$ [mm]
Timber C24 EN 14081 th 30 mm	30	30	120
OSB board EN 300 th 18 mm	18	30	120
Plywood EN 313 th 20 mm	20	30	120

##### MOUNTING METHOD

## VAPOUR BARRIER FOIL FBZ-0250

Standard: PN-EN 13984:2013

### TECHNICAL DATA

Parameter	Unit	Value
Thickness	[mm]	0,20 +/- 20%
Width x length	S x L [m]	2 x 50
Roll height	H [m]	1,05
Water resistance	kPa	2
Water vapour diffusion resistance coefficient	$\mu$	593432 +/- 10 %
(Nail) tear resistance - average value (longitudinally)	N	$\geq 45$
(Nail) tear resistance - average value (crosswise)	N	$\geq 50$
Maximum tensile strength - average value (longitudinally)	N/50 [mm]	$\geq 80$
Maximum tensile strength - average value (crosswise)	N/50 [mm]	$\geq 60$
Elongation at break (longitudinally)	[%]	$\geq 150$
Elongation at break (crosswise)	[%]	$\geq 190$
Impact strength (A method)	[mm]	$\geq 200$
Vapour diffusion resistance after artificial aging	[%]	+ /- 50
Straightness along the length	[mm/10 mb]	$\geq 75$
Reaction to fire	klasa	E
Standard		PN EN 13984:2013
