*You draw it,
We create it.*

The VERSATEXURAL program is your one stop shop to making custom fabrication visions reality. Armed with CNC routers and a bevy of other high-end cutting and fabrication equipment, VERSATEXURAL is setting a new standard for manufactured work and design and can make virtually anything from a millwork perspective.

All finished products are made from VERSATEX PVC, standing the test of time and carrying a lifetime transferable warranty against moisture or any environmental issue.

Simply head to versatextural.com to submit your drawing. You'll receive a quote back between 48-72 hours of submittal, with typical lead-time for project completion being 2-6 weeks, based on complexity and size. Product is sold through our standard distributor/dealer channels.

*Columns
Brackets
Corbels
Rafter Tails
Shutters
Custom Mouldings
Window Surrounds
Rail Systems
Pergolas
Trellises
And much more*

VERSATEX is already known for its unique, one-piece design of column wraps with inter-locking, pre-mitered joints that make installation a breeze. Now, any design can be created with VERSATEXURAL, allowing any ornamental design or historical engraving to be recreated perfectly and last a lifetime.

Brackets, Corbels & Gable Inserts

From Florida to Ontario, VERSATEX has custom brackets installed on homes all over the nation and beyond. Send us your drawings and inspiration or work with our team to design the perfect bracket, corbel, rafter tail or gable for your project. From 6-foot tall brackets under second-story decks to rafter tails under a church bell tower, VERSATEXURAL has done it all and can achieve whatever you can dream up.

Custom Shutters

There is no need to worry if your upcoming project calls for a specific style of shutter that can't normally be purchased. Simply provide us with a reference image and VERSATEXURAL will be able to recreate any type of shutter needed. From raised panel and board & batten style shutters to intricate cutouts and louvered shutters, we strive to make you feel confident that any design is available when working with us.

Historic Restoration: *About the Covers*

The Baldwin Wallace University Building was designed by Godfrey Fugman, with construction being completed in 1896. The building's cupola was used by the University band to play the football fight song before each Baldwin Wallace home game. After years of patching and changing the architectural design, American International Construction deemed the cupola ready for a remodel and was commissioned to dismantle and restore it to its original late 1800's look.

Bill Sandrock, President and owner of Stratton Creek Millwork, who had worked with American International on other historic projects, was brought in to reconstruct the cupola, which needed a piece-by-piece dismantle to restore it to its original appearance. To have the cupola withstand the test of time and withstand the harsh winter weather in northern Ohio, Stratton Creek Millwork chose VERSATEX Building Products Trim and Sheet for the project & VERSATEXURAL was born.

The Congregational & Presbyterian Church, located in Kinsman, Ohio is known far and wide as one of Trumbull County's oldest extant churches. Built in 1833 by master architect William Smith, the church features a soaring bell tower accentuated with wooden spires mounted at each of the tower's four corners. After nearly 170 years of exposure to the elements, both the structural and decorative components of the wooden tower were succumbing to rot and deterioration, making the entire structure a safety concern. The church braced itself for what was certain to be major repairs.

While VERSATEX has a strong reputation in the building industry, this project demanded new fabrication techniques and assembly strategies to address the specifications of the job. VERSATEX leadership worked closely with Stratton Creek Millwork and American International Construction to develop the techniques and processes needed to bring the restoration to fruition. According to John Pace, President of VERSATEX, "The millwork on this job, as intricate as it was, showed us a few things we hadn't thought were possible before."

The Kinsman Presbyterian Church project took over a year to organize and fund and another year to complete. Today, the bell tower structure is completely restored to its original, historic appearance, featuring all custom VERSATEX product and symbolizing the beauty of early 1800's Greek Revival/Gothic Revival architecture popular during that period of American History.

When working on a historical project, it's essential to produce an exact recreation of all the trim. It can be quite the task to match a historical moulding, a piece that is pivotal to the architecture of some structures. Now, it can be as simple as providing a sample or a drawing. VERSATEXURAL can make any style of moulding possible, no matter how intricate, to ensure your clients are happy and you are saving time on the job site.

If you need something special to support the unique windows of a custom home or distinctive building, VERSATEX has the solution. Using our tried and true PVC material, VERSATEXURAL can create a clean design that fits your window perfectly, leaving the job looking truly remarkable. An added bonus: since most surrounds can be constructed in one piece, the installation time is drastically reduced, a win-win for both building owner and installer.

Custom Railing Inserts

Perhaps you have a historical project that requires an intricate rail design, or maybe a new construction that wants to stand out, VERSATEX has the ability to match any design given, making complete custom railings that will truly impress. Whatever you may need, VERSATEXURAL can accomplish your design and create railings to perfectly match your needs.

Pergolas & Trellises

The starting point of all VERSATEXURAL projects, the possibilities are truly endless when it comes to our custom millwork offerings. We can make anything you dream up come to fruition, from a simple pergola system to 50-foot church steeples and everything in between. Nothing is too small or too large to manufacture and each piece is crafted to perfection, ensuring custom millwork that will last a lifetime and be sure to impress.
