

# INSULATING CONCRETE FORMS

## BLOCK DETAILS

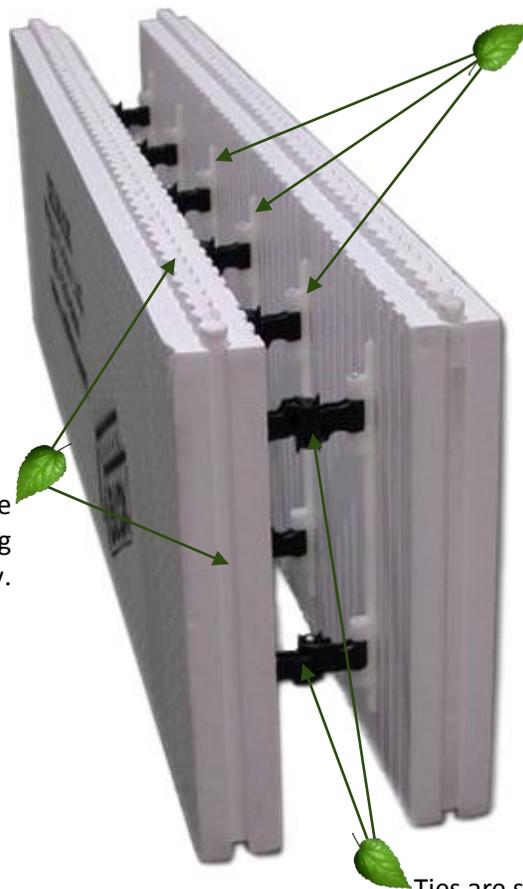

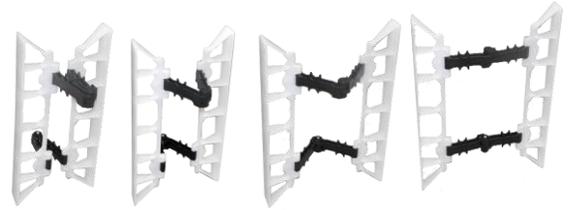

CELBOX® is a manufacturer and supplier of ICFs used for affordable, energy-efficient construction.

CELBOX® ICFs provide significant energy savings, greater comfort, added security, and faster construction than other wall systems.

CELBOX® ICFs combine forming, furring, and insulation in one step.

CELBOX® ICF are 100% recyclable.

- Our patented tri-fold ties ship flat and average 100% more block per truckload.
- Fully assembled blocks are ready to use – just pop open and stack.
- Shrink wrapped bundles provide efficient, clean jobsite storage.

The tongue & groove system makes cleaning and stacking easy.

8" o/c webs provide furring strips for interior and exterior finishes.

The webs and ties of CELBOX® ICFs are made from Pure Virgin Polymers that give them greater strength than regrind polymers. There is virtually no cracking when nailing or screwing through the webs.

Ties are strategically placed to maximize concrete flow and eliminate voids
