

Drying cabinets and dehumidifiers

Practical solutions for everyday stable life

NIMO

NIMO-products in the image: Laundry bench TB 1200 T and drying cabinet DC120HP.

Moisture and dampness are common challenges in stable environments, but with the right equipment, work can be made easier, and the environment can become more sustainable.

Horse blankets, riding clothes, and other equipment often get wet after use or washing, and natural drying requires both time and large spaces. A drying cabinet is a solution that also extends the lifespan of materials.

High humidity can also negatively affect the building itself, for example, by causing mold and moisture damage to walls, floors, and storage areas. With a drying room dehumidifier, excess moisture in the air is reduced, helping to protect both the building and its contents from damage and unnecessary maintenance costs. Investing in modern drying solutions is not just about convenience – it is also a matter of hygiene

and safety. A dry and wellventilated environment reduces the risk of bacterial growth and unpleasant odors, which is crucial in stables where both horses and people spend time daily.

Modern drying cabinets and dehumidifiers are developed to meet the demands of stable environments while being energy efficient. Investing in high-quality solutions for the stable environment ensures a longer lifespan for both equipment and buildings.
