Business strengths

True business versatility

The range of Philips professional display solutions covers any corporate requirement – for SMEs to multinationals – in lobbies through to meeting rooms, all designed to work together, seamlessly and sustainably.

Firm financial foundations

Philips professional displays are built on the strong and stable footings of TPV Technology – the largest display manufacturer in the world, bringing you confidence commercially, and through our supply chain.

Confidence in quality

The Philips brand stands for unquestionable quality and for meaningful innovation. A leader in technology, in design and in sustainability. Stable and secure, Philips direct view LED displays are tested and certified by TÜV.

Proofed for the future

Philips direct view LED displays are designed for the long term, based on open technology for easy solution building, and a modular approach that supports reshaping for design flexibility and easy access repairability.

Trusted Philips dvLED partners

All PPDS dvLED partners are trained product experts – solution architects and technicians certified by our teams for knowledge and best practice. Bringing you true confidence for your Philips direct view LED display installation.

Total corporate solutions

Your Philips direct view LED display is just the beginning. We partner with leaders in software and complementary hardware to bring total solutions. All supported by our teams globally and locally for seamless consistency.

Optimal picture quality

Delivering on superior depths of black and vivid colour, with high brightness options, Philips direct view LED displays offer optimal performance. Each panel's calibration settings can be customised for wall-to-edge correction.

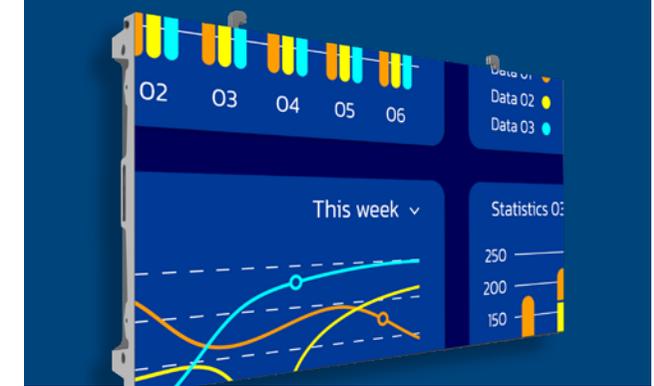

Working together with you

Approachable and always here to help. Our teams, together with our network of installation and solutions partners, as well as our PPDS Global Partner Alliance, are open to you – wherever, and whenever.

Philips LED 6000 series

Collaborate with confidence, displaying your presentations in 16:9, 21:9 or 32:9 formats, pitch perfectly. Delivering whites and blacks flawlessly for a crystal-clear performance, showcase inspired business vision in your meeting rooms and boardrooms with the Philips 6000 Series direct view LED.

Success stories

HARFID

As a future-oriented innovator in the construction industry, HARFID always integrates the latest technologies. Bringing this ethos into its own head office, the company needed a collaborative solution, allowing them to successfully demonstrate designs and functionality to their audience.

Bimagotec and PPDS came together to create the perfect custom solution - a super-bright dvLED wall, ensuring clearer visibility and faster client approvals for projects. To supplement, HARFID's meeting rooms were fitted with Philips touchscreen displays, enabling intuitive content with better collaboration. Information displays were also installed throughout the office to better connect each team member, while a giant videowall comprising eight 65" displays was set up in the common room to play promotions, branding, and ambient content.

Using PPDS CMND, each display is linked into HARFID's custom CMS, allowing team members to create and share their work on any display wirelessly or by cable.

"The design of the Philips direct view LED Videowall is breathtaking, and the overall solution has enabled a real difference in what is now possible."

Harfid Hadrovic, CEO, HARFID

Heijmans

Heijmans teamed up with PPDS and BIS|Econocom for an eye-catching AV solution. Harnessing the creative design of the main hall, a custom Philips 7000 Series direct view LED display was installed across a central corner wall.

This oversized display was made for impact with its unique 45-degree cabinet design that delivers a versatile visual feast capable of input from single and multiple content channels. Featuring high brightness and fine pixel pitch, Heijmans can now ensure that their branded content and news, as well as their company and project information is prominent, sharp, and clear.

As a result of this spectacular LED wall, the innovative nature of Heijmans is always on display – forming a lasting impression for all visitors and staff.

"Philips direct view LED is really cost effective and you can be very creative with its integration. It was a flawless installation and we couldn't find any dead pixels. The Philips 7000 series is one of the best in its kind."

Bart Donkersloot, Sales Director, BIS|Econocom

ITAS Mutua

To give their boardroom the AV solution it deserves, ITAS Mutua teamed up with PPDS and 3P Technologies for a state-of-the-art display set-up. To complement the extremely large space, an awe-inspiring 137" Philips L-Line direct view LED wall was installed to ensure content remains the centre of attention. This oversized display is masterfully finished in a tailor-made support frame with an elegantly coordinated custom colour that evokes a prestigious feel. Two 98" Philips D-Line displays were also installed for design consistency across the boardroom.

The entire system is fully integrated with ITAS Mutua's Crestron Connected system – allowing for optimised display functionality and device connectivity for seamless content switching and control. To ensure a greener footprint, the displays also switch off automatically at predefined times. The result of this installation brought perfect harmony to the architectural context and functional needs of ITAS Mutua.

"The new Philips high definition screens allow us to achieve a result of an outstanding quality to be used by the strategic members of our company."

Mauro Luchetta, Director, ITAS Patrimonio

AlienTrick

AlienTrick is a highly creative and strategic marketing agency in the Netherlands. Headquartered in a state-of-the-art building, the agency wanted to create an innovative and inspiring window to the world.

To transform their vision into reality, AlienTrick teamed up directly with PPDS for a special in-house collaboration. Unifying their expertise to create a perfect solution, the teams placed a custom-designed, outward-facing Philips L-Line direct view LED wall behind the agency's windows. This oversized solution enables AlienTrick to showcase their greatest work to help inspire those passing by with their creative concepts and capabilities.

The display is also used to advertise job vacancies, and to announce exciting news, such as AlienTrick's latest awards and accolades. Chosen for its seamless panel integration, the Philips L-Line is a true reflection of the agency's work, which knows no limits, and no boundaries.

"The Philips L-Line direct view LED was very easy to install, and has brought us big results by inspiring passers-by and enhancing our regional exposure."

Raymond van Cleef, Co-Founder, AlienTrick
