## Curtainwall Retainer System

Our field-installed Curtainwall Retainer System allows for seamless integration of our door systems into building curtainwall systems, matching and aligning with adjacent fixed systems, blending door systems and fixed storefront. Allowing for thicknesses between 3/16" and 1-5/16", our Curtainwall Retainer provides a thermally-gasketed pressure plate system ready for your choice of insert.

Glass in almost any variety is the most common insert. However, our customers often select other materials such as decorative, insulated paneling or wood. With few exceptions, the sky is the limit.

The Curtainwall Retainer System consists of 24' aluminum-extruded base plate, pressure plate, and beauty cap, made ready for field cutting and installation. Our Curtainwall Retainer System is factory powder-coat, Kynar Paint, or Anodized finished per customer specifications.

### KEY FEATURES

- Thermally gasketed for cold weather climates
- Supports insert thicknesses between 3/16" & 1-5/16"
- Powder-coat, Kynar Paint, or anodized finish
- Allows for integration into building storefront

**Perfect for Storefront Integration  
and/or Cold Climates Where  
Thermal Considerations are Key**
