

BIKE PERCH

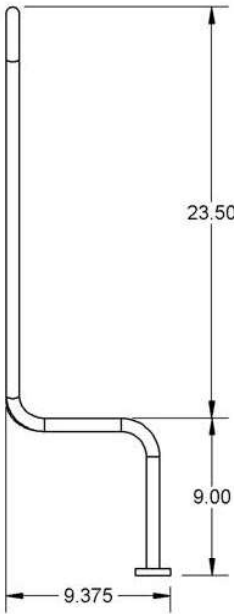

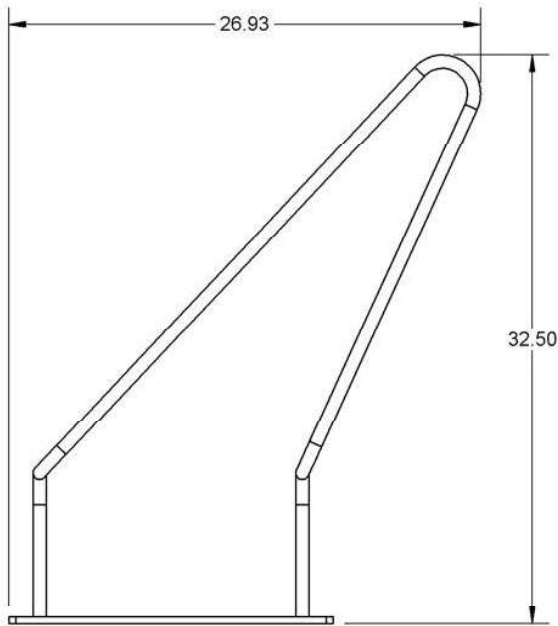

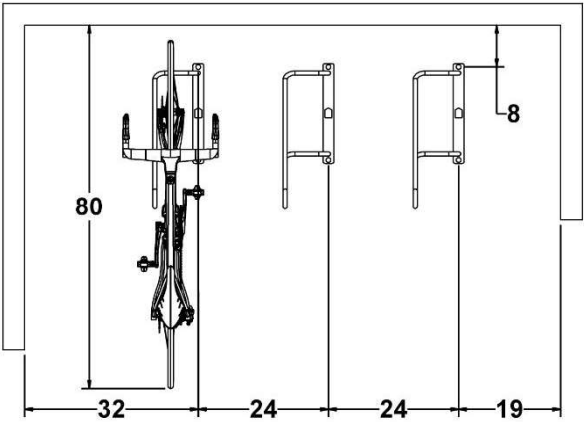

The Bike Perch provides a low cost, high-density bike parking option with a unique look to make your racks stand out. The main bike position in the wheel well provides a stable parking space and a second bike can be parked on the opposite side to provide high-density parking without handlebar interference. Can be surface mounted on its own or to rails for a freestanding setup.

Product Specifications

- Unique single piece upright makes a statement
- Can mount directly to surface or in several rail mount configurations
- 3/4" solid steel bar provides security and strength
- Parks one bike in wheel well and can accommodate 2nd bike on opposite side for higher density parking
- Meets APBP bike parking guidelines
