

M [S] MINIMALIST
L] systems

I have spent over 20 years satisfying my clients with the manufacture and installation of aluminum joinery. About 10 years ago, I was captivated by minimalist joinery. Since then, I have dedicated all my energy and determination to Minimalist systems®.

My daily life as a manufacturer-installer has allowed me to understand what our clients and architects truly expect from us: to think beyond the technical and envision living spaces as areas of well-being where the interior and exterior merge.

I am not formally trained as an engineer; I am driven by passion! What I thought was a disadvantage has turned out to be my greatest asset. Where there were logical constraints, I managed to create unique solutions.

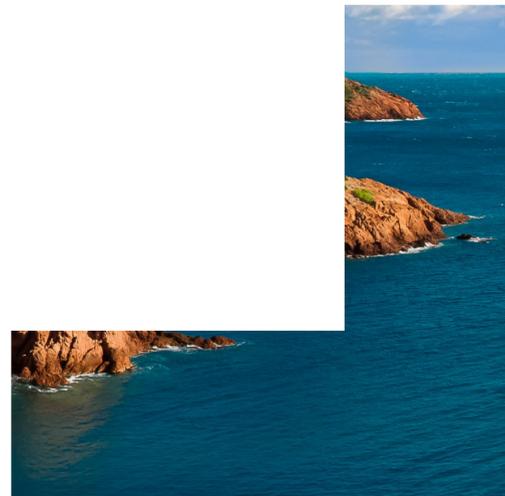

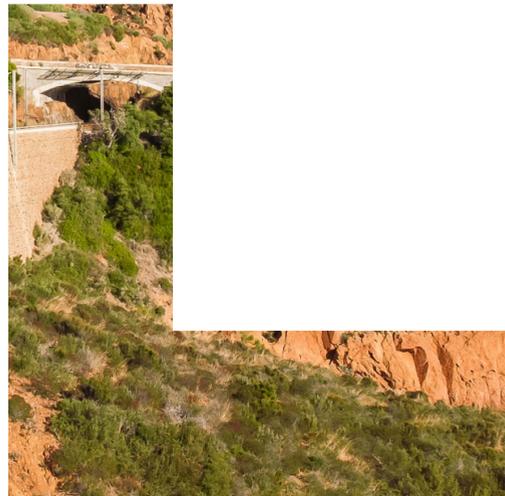

The Minimalist systems® concept is not just about having the least visible window; it's a comprehensive vision. Fewer profiles while offering a maximum number of configurations, a design and production with French finesse, extreme customizations with the incorporation of leather, carbon, or other materials tailored to your personality. Finally, an eco-responsible production with 100% recyclable materials.

I invite you to discover the philosophy of Minimalist systems®.

We envision minimalism in a comprehensive way. In addition to focusing on the slimness of the profiles, we have also aimed to create an environmentally respectful brand.

For this, we have developed an exclusive system of add-on rails allowing for all opening configurations with a minimum of extrusions. This exclusive system optimizes offcuts and stock management in line with our minimalist vision.

Most of our profiles are extruded and manufactured in the south of France to further reduce our carbon footprint.

demand

Our expertise originates from our experience in the manufacture and installation of minimalist joinery. We have identified the key features that Minimalist Systems© must have to offer you a complete range.

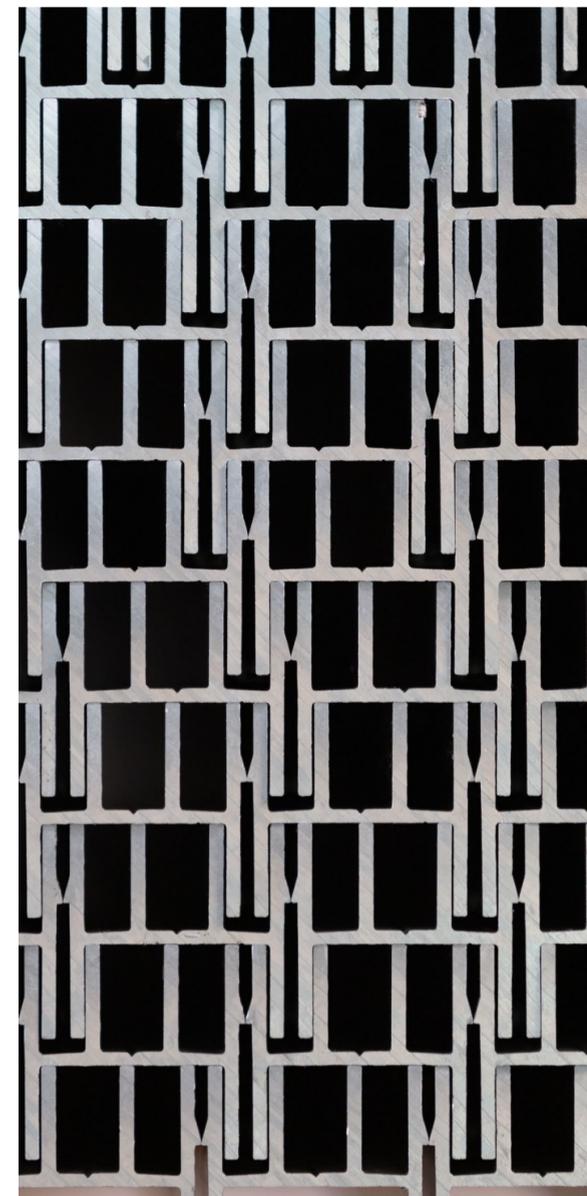

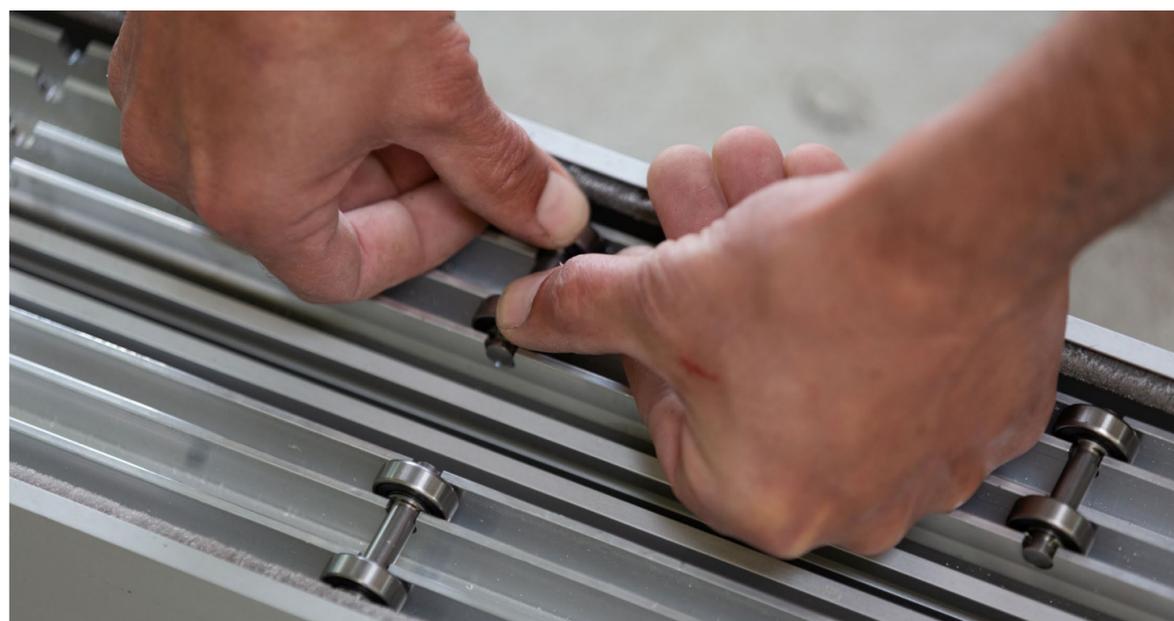

We offer a variety of opening combinations and unique customizations. Quality for us is a comprehensive element.

As designers, manufacturers, and installers, these three strengths allow us to guarantee precise execution that meets your expectations.

imagination
solution
technicality

Fixed, pivoting, or sliding, Minimalist Systems© joinery offers you perfect freedom of movement. Our exclusive rail system allows you to choose, according to your needs, the number of rails or the type of opening. Our solutions come in pocket door, guillotine, angled opening with or without a post.

fixed MS00

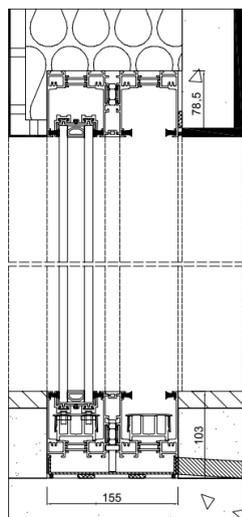

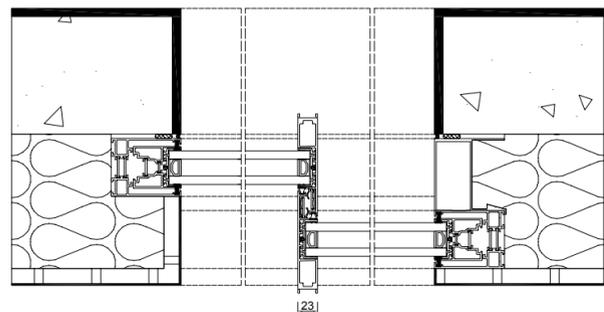

The fixed frame embodies the very essence of minimalism. Glazed surfaces have significantly increased in architectural projects thanks to technical advancements in glass manufacturing processes. Some factories produce glass panels over 9000 x 3000 mm in size... The MS00 then becomes an obvious choice.

sliding MS81

The result of several years of research and development, the MS81 is the quintessential minimalist frame. Only eight dies were required to produce this high-performance sliding frame.

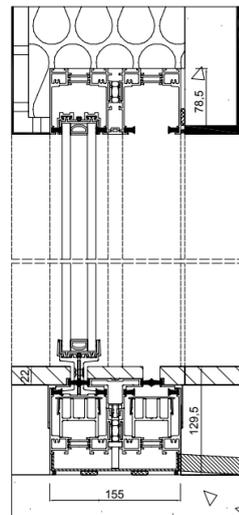

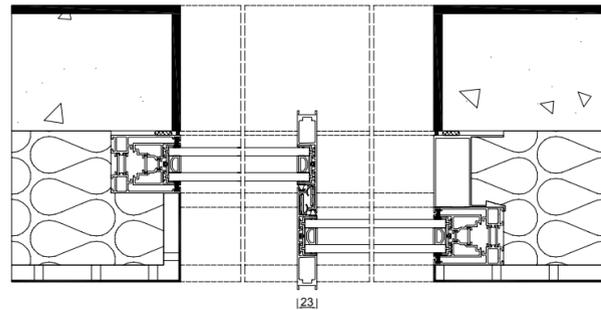

The MS81 was designed to support panels weighing more than a ton with only a 23 mm baffle, a fully recessed locking stile, and floor-to-ceiling clear glazing.

sliding MS55

The MS55 quickly became a benchmark. In addition to our 23 mm baffle and fully recessed lock stile, this development offers a completely invisible rail.

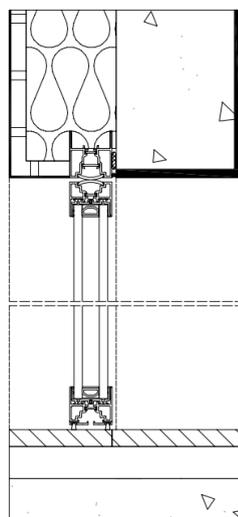

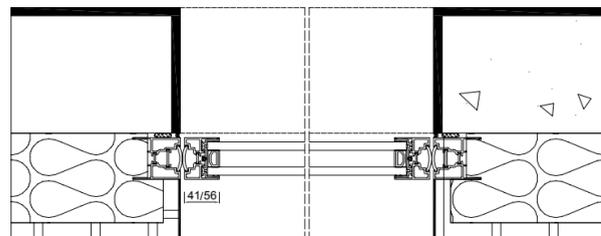

Mounted on a single-arm profile with a thermal break, the panels slide effortlessly over your covering, leaving no barrier between the interior and exterior. The MS55 is, so to speak, invisible: the epitome of minimalism.

pivot MS3.14

The newest addition to the family, the MS3.14, aligns with our ecological and economical approach to minimalism. We have created this new system using existing profiles from our range. With its recessed frame, this pivot door offers visible edges of only 40 mm.

The MS3.14 combines aesthetics and security thanks to its multi-point electric lock with access control. It can be constructed with a central or offset pivot for panels weighing up to 600 kg.

glass
combination of glazing

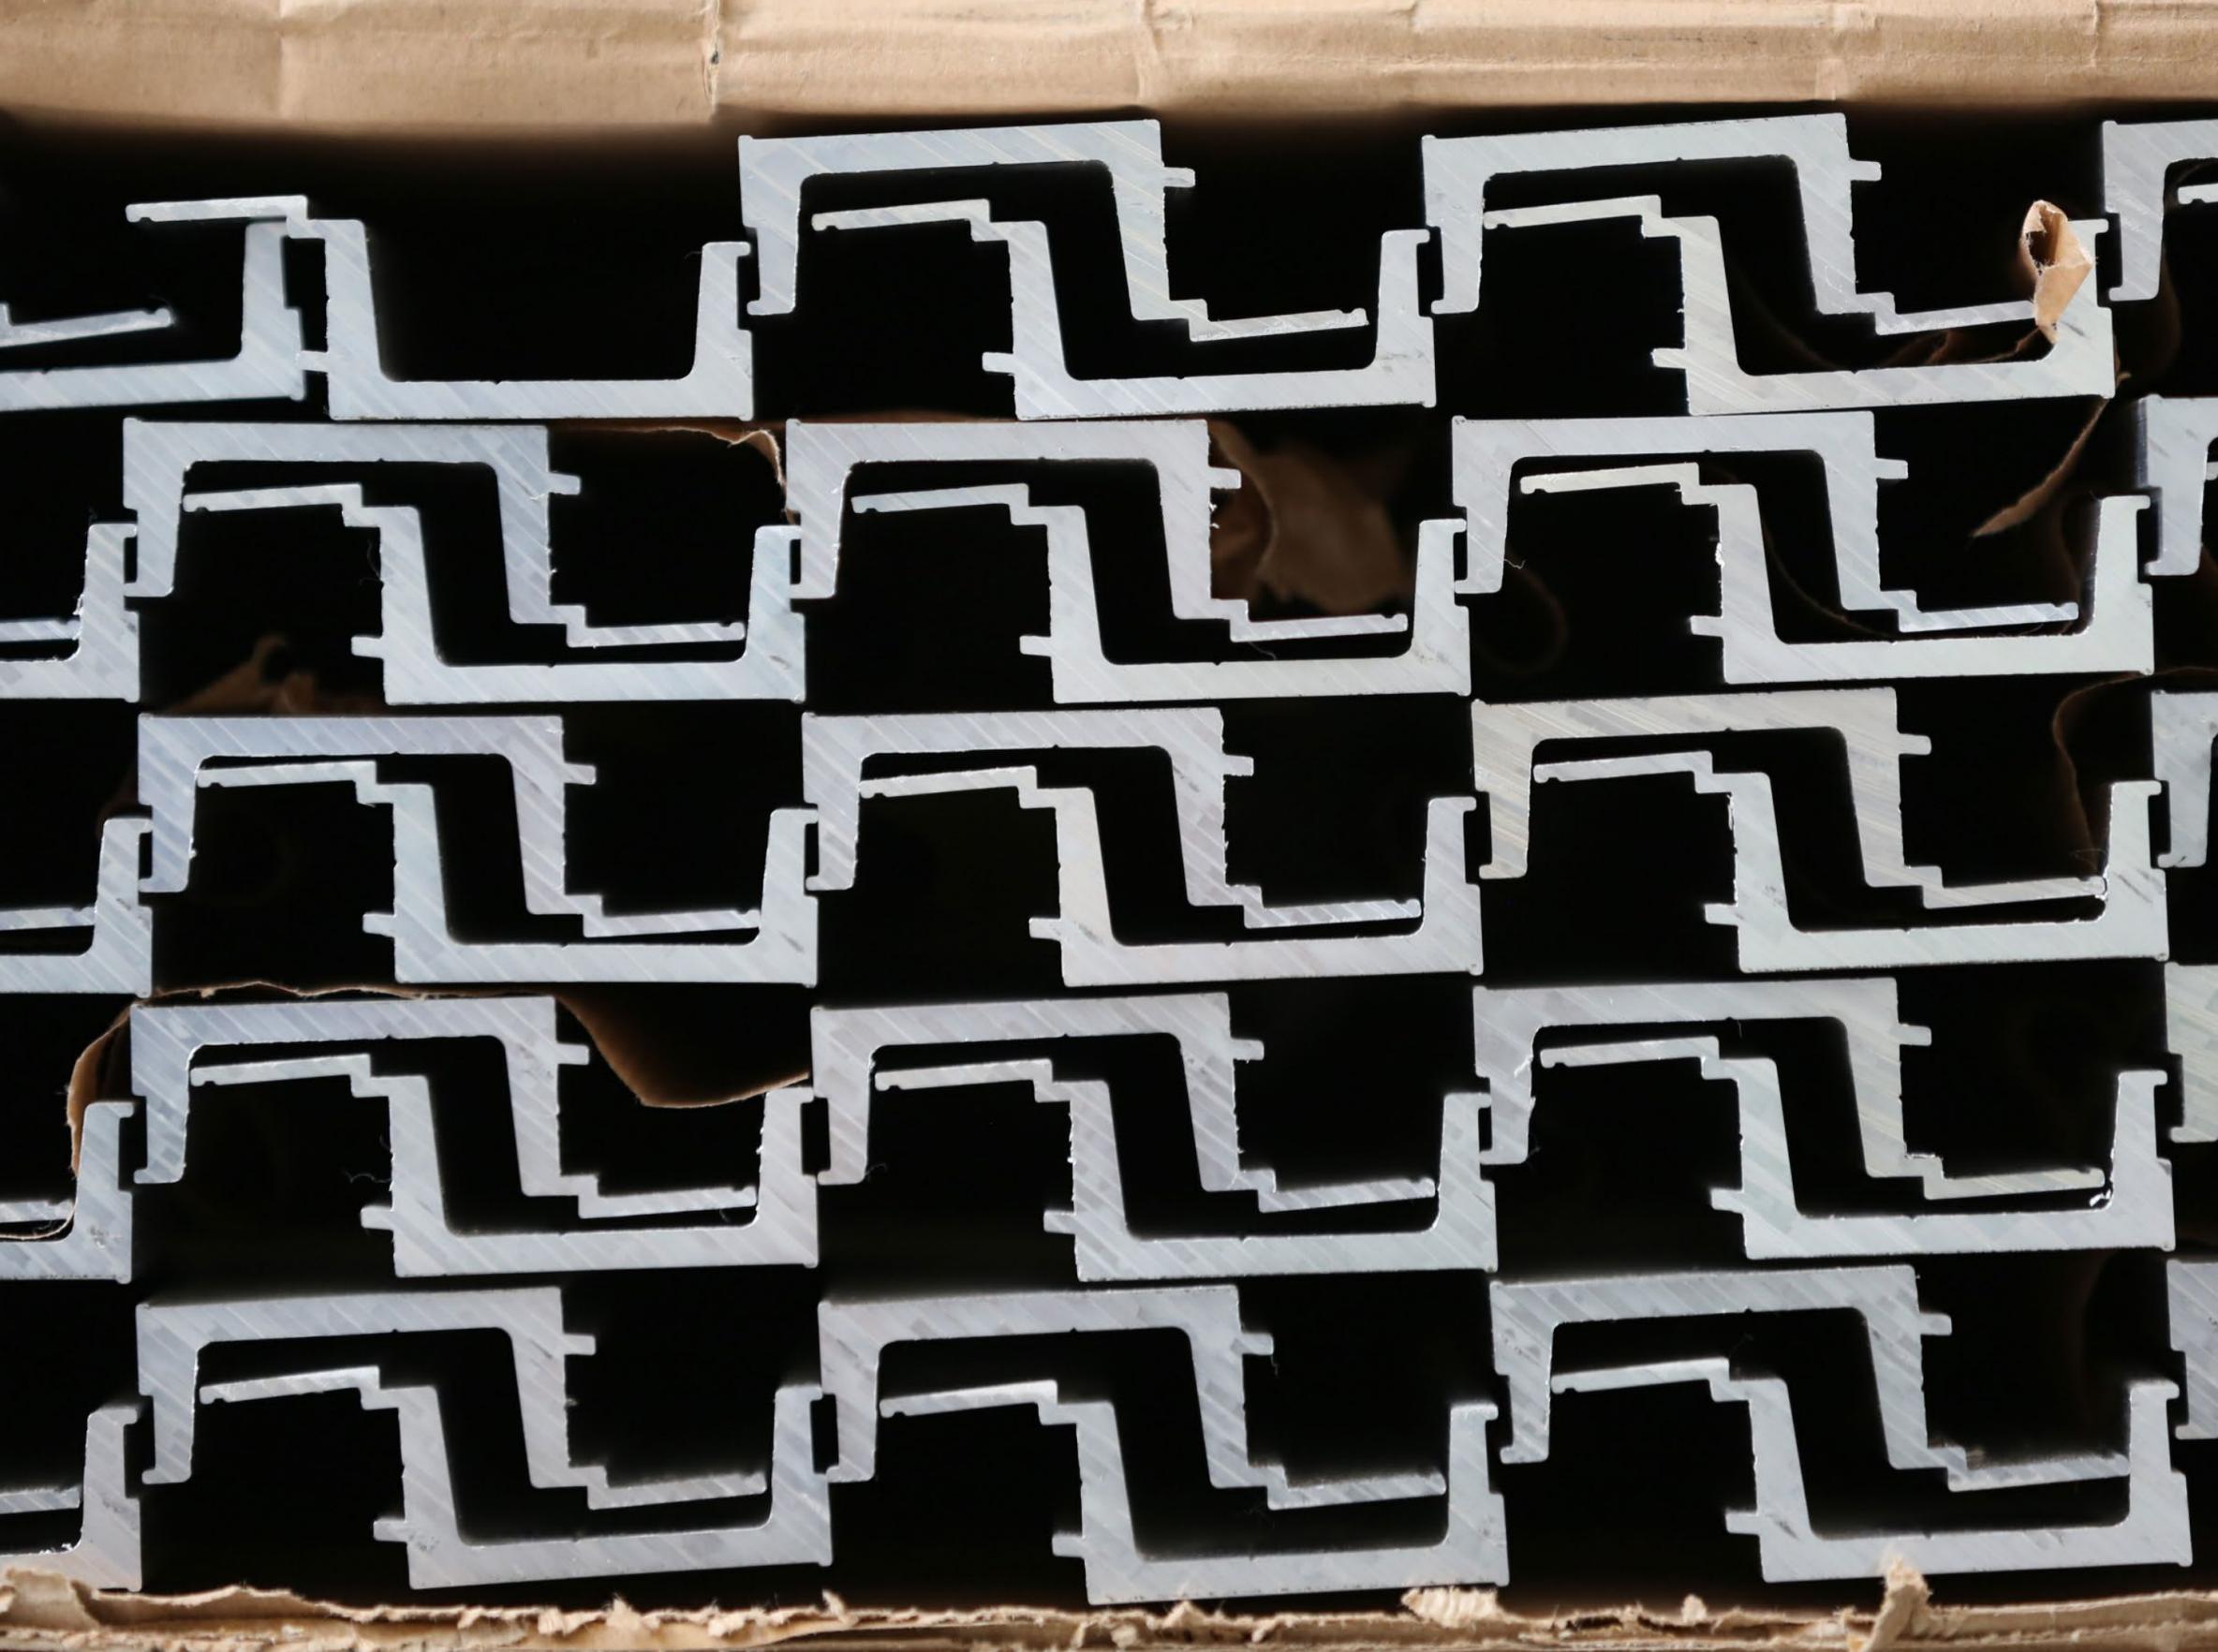

With over 99% glass surface area*, the combination of glasses must be perfect.

The glass-to-profile ratio greatly favors the glass, making it a fundamental component of minimalist joinery. Minimalist systems® frames are equipped with double or triple glazing to meet the most ambitious projects. We are capable of producing and delivering exceptional double glazing measuring up to 9 meters by 3.21 meters in a single volume.

Minimalist systems® offers options complying with the NF DTU 39.4 standard:

- *enhanced Thermal Insulation Glazing (VIR) or Low Emissive (FE)*
- *Intrusion-resistant glazing types P5A or P6B considered anti-burglary for insurance purposes,*
- *tempered glass*
- *solar control glass, generally used to minimize the impact of the sun's heat inside your home,*
- *heated glazing,*
- *alarm glazing that, when connected to a central system, triggers in the event of glass breakage.*

*For MS81, 2 panels of 4000L/2500H

powder coating and anodizing

Unmatched
durability and ease
of maintenance.

Shot blasting for a satin finish, brushing or polishing are finishes available at Minimalist Systems®, as are endless possibilities for lacquering with levels of gloss or texture adjusted for a customized project.

Minimalist Systems® meets the most demanding labels and certifications:

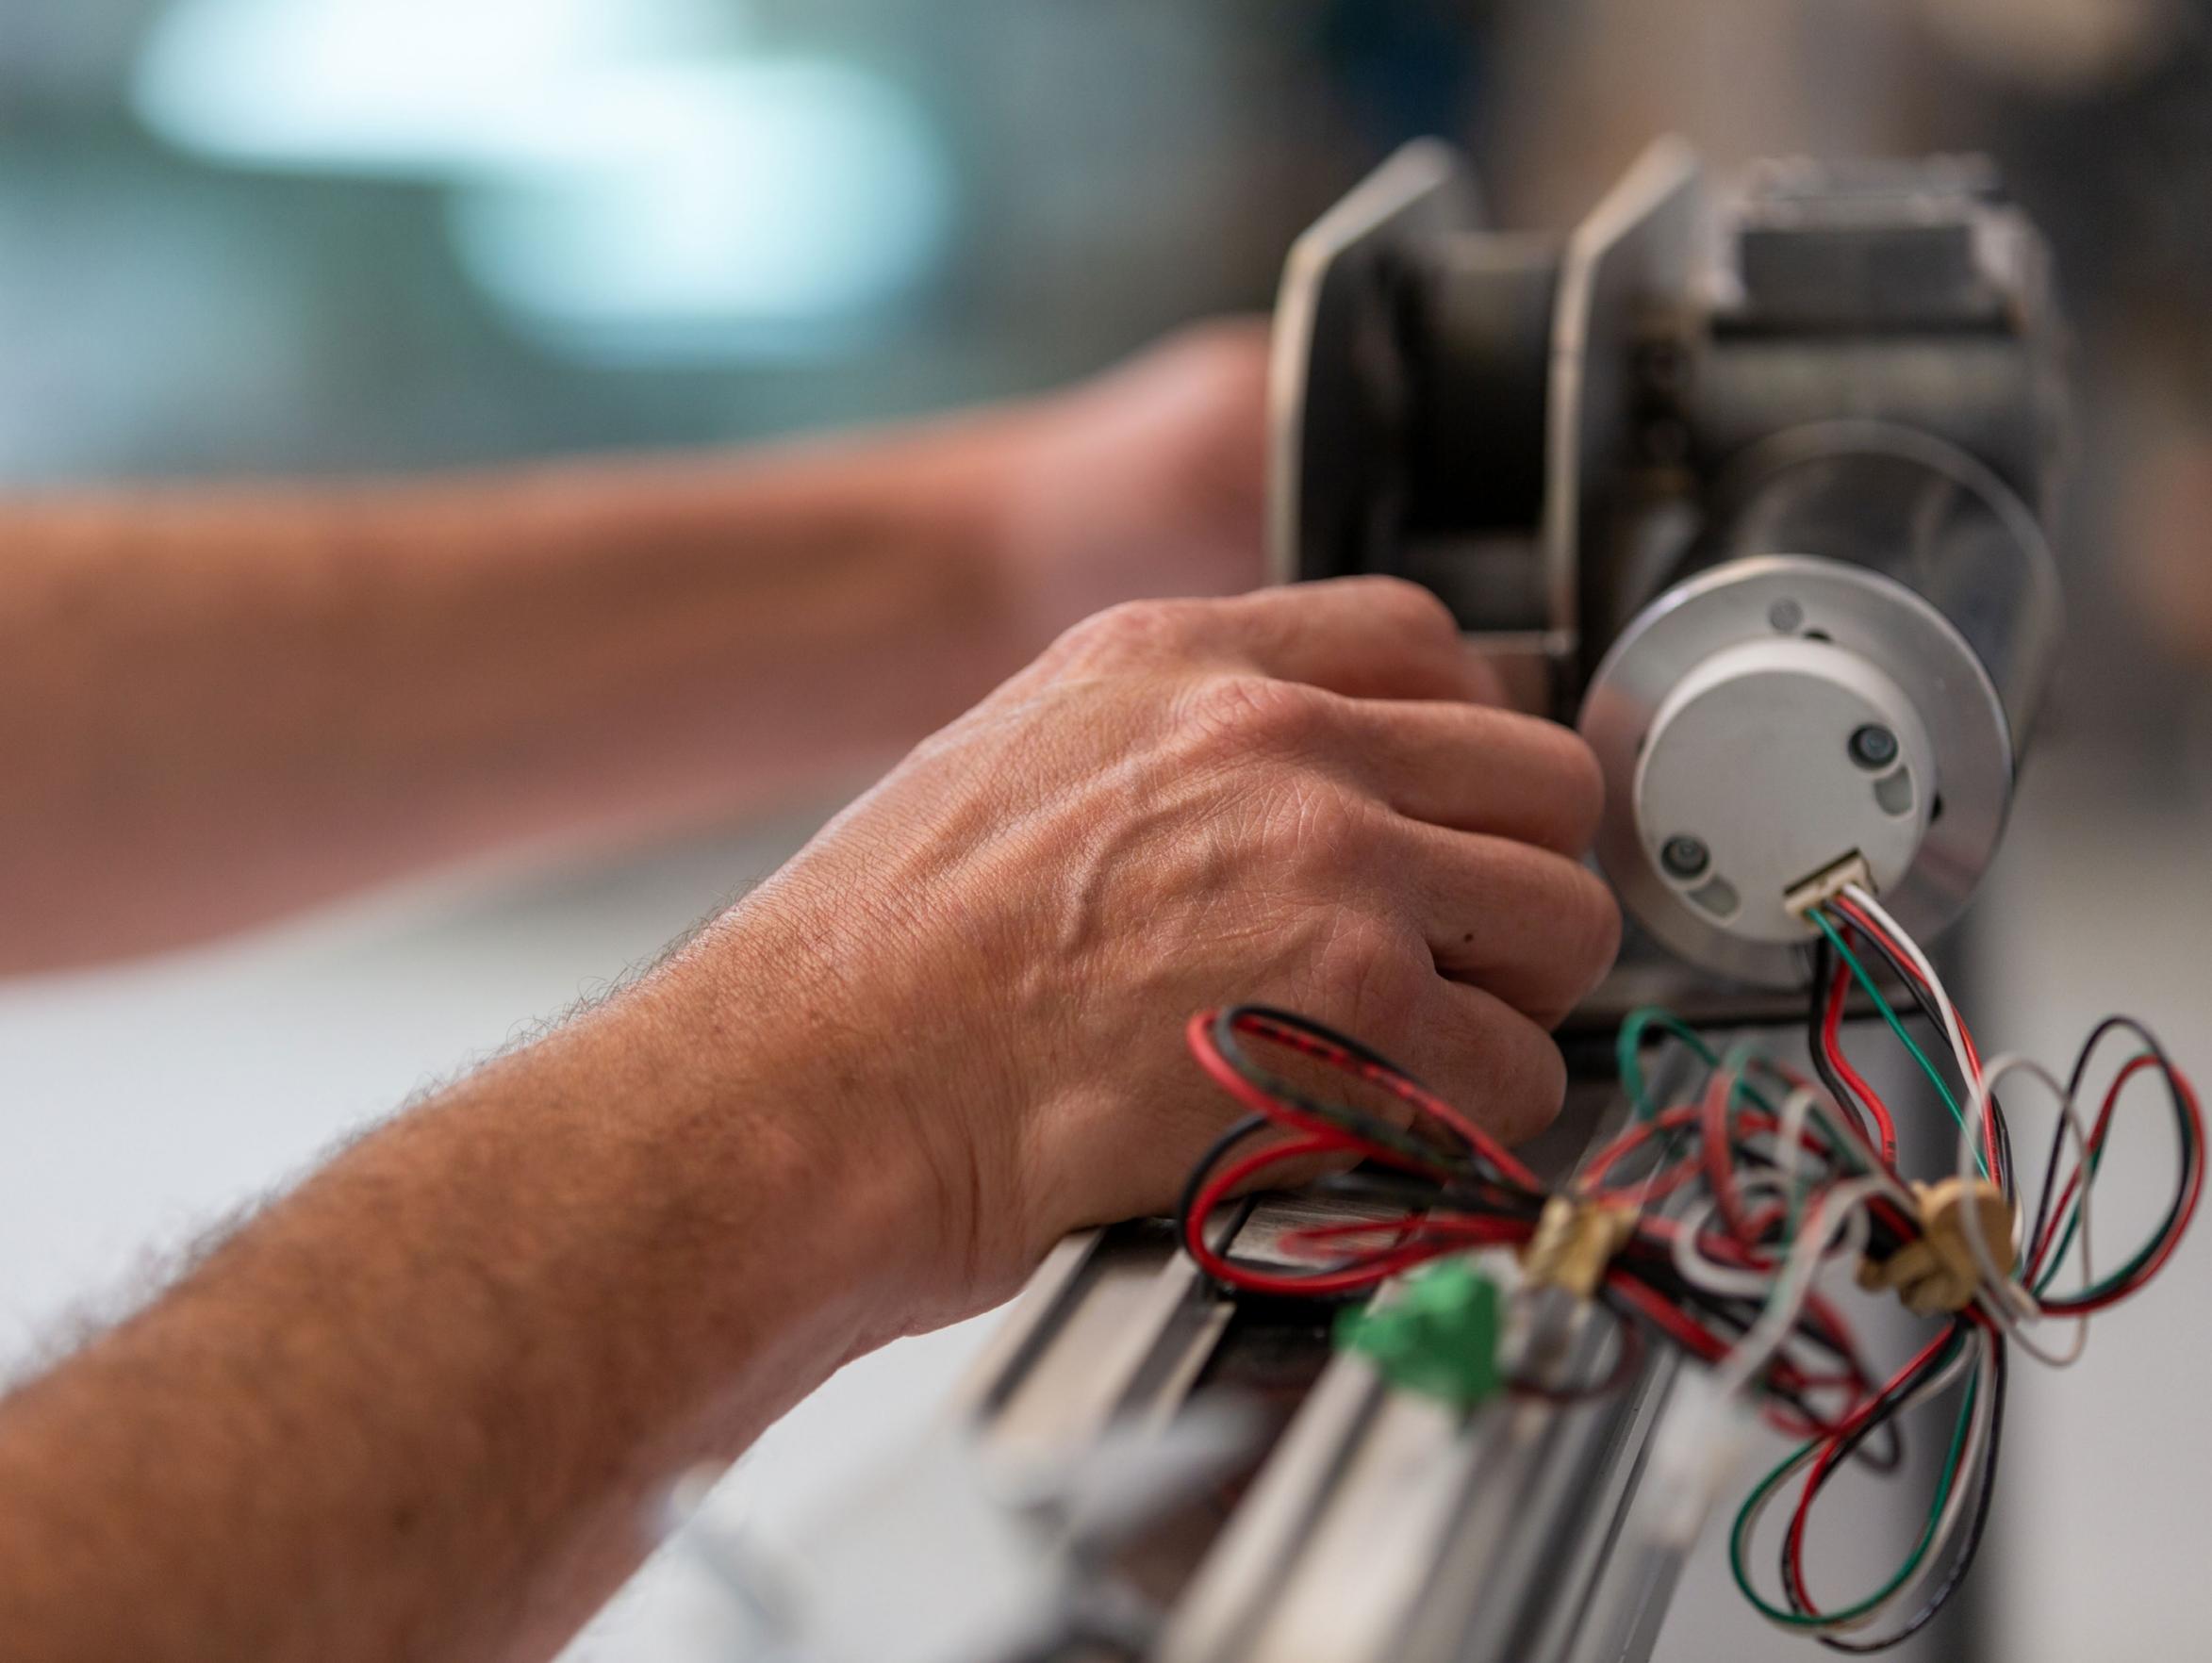

unique options
custom projects

brass
carbon
leather
wood

The window is no longer just an opening; it is an integral part of the architectural project. Minimalist Systems® was created in close collaboration with demanding and innovative architects. We wanted to offer them the choice of customization. Our exclusive baffle system allows for the insertion of materials such as leather, wood, carbon, making each project unique.

closure motorization and locking

Combined with the appropriate glazing, you will sleep in complete tranquility.

The MS81 and MS55 series are motorizable. Offering comfort and security, our motor unit, located at the top of the frame, drives a belt through two pulleys. The obstacle stop function ensures your safety during operation. An electric lock then secures the opening from top to bottom and can be paired with an additional suction strip for optimal protection.

Minimalist Systems© standardly offers manual closures on the frame at 2, 3, or 4 points depending on the dimensions. Suction strips for sliding systems or 3-point electric locks for the MS3.14 are available as an option.

We also offer the addition of an alarm contact specifically designed for our profiles that will be connected* to your alarm and opening system.

**(excluding connection)*

security protection of your home

The very design of our frame is a major asset for the protection of your family and property.

From our initial sketches, security has been a top priority. The lock-stile is fully embedded in the masonry, leaving only the glass protruding. This design, which prevents the passage and use of lever tools combined with laminated, intrusion-resistant glass, will guarantee absolute peace.
