Company founder Albrecht Jung

## Progress as tradition

As a pioneer of his time, Albrecht Jung created the basis for the JUNG success story with the founding of the company in 1912 and the development of his pull switch with 1/8 rotation. The original motivation remains the driving force for all products to this day: JUNG develops and produces timelessly designed products and future-oriented solutions with pioneering spirit. As a premium supplier of modern building technology, the portfolio of the traditional medium-sized company includes switches, sockets, dimmers, observers and systems for controlling functions.

Convenient regulation of lighting, temperature and shutters, music in every room, timeless switch design, intelligent security systems or the smart control of the entire technology via touchscreen – JUNG stands for a skilful interplay between design requirements and innovation.

### WE ARE JUNG:

**1912** Medium-sized third generation family company

"Made in Germany" for more than 100 years

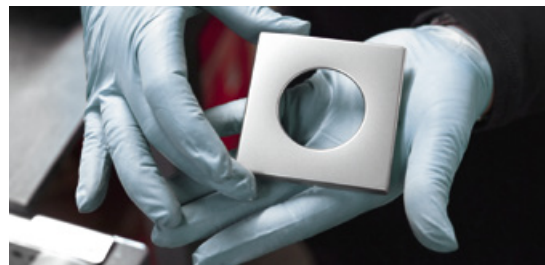

Around 1,400 employees

20 subsidiaries and over 70 agencies worldwide

## Products "Made in Germany" — manufactured with precision

JUNG products are manufactured at the two company sites in Schalksmühle and Lünen. For this, JUNG received the certificate "Made in Germany" from TÜV Nord in 2011. JUNG has deep roots in the region and has been a constant employer for many decades. Today, customers throughout the world rely on the continuing high quality of JUNG products. At the same time, JUNG is aware of its high responsibility for sustainable and energy-efficient production.

JUNG has proven its specialised know-how in metalworking for decades. The company provides its switch designs in genuine metal: matt finished

or lacquered aluminum, glass-ball blasted stainless steel, brushed brass, chrome-plated metal or 24 carat gold plating. In order to reproduce the impressive colour depth of the 63 Les Couleurs® Le Corbusier colours, JUNG has those switches painted by hand in a special process. This creates the matt, slightly rough surface of the LS 990 LC switch.

JUNG produces precision switches down to the last detail every day. Worldwide, office and residential buildings, hotels and cultural as well as educational buildings are already equipped with future-proof solutions in the aesthetic JUNG design.

## JUNG Brand Store London

Experience esthetics in the heart of Clerkenwell.

London – an architectural melting pot. Roman heritage, Georgian house fronts, modern skyscrapers define the cityscape just like Victorian bay and sash windows. Architecture icons like Lord Norman Foster and Zaha Hadid set up their offices here. The London architecture scene is characterised by innovation and internationality – a familiar setting for JUNG. In the creative district of Clerkenwell the German premium manufacturer of

modern building technology opened its first showroom in the United Kingdom. JUNG's design apartment shows its high-quality products and individual solutions to potential customers.

**ADDRESS:**

6, 7 Albemarle Way  
London EC1V 4JB  
United Kingdom

**OPENING HOURS:**

monday till friday  
9 am till 5 pm  
Visits by prior arrangement.
