Illona	✓		✓	✓	✓		✓	35
Mata	✓		✓	✓	✓	✓	✓	—

Individual Panels - Perpendicular, Parallel, Remote or Custom Stack (Stella, Luna, Ava, & Illona)

Individual panels are top supported by two (2) carriers that operate in the track system that allows panels to move and turn effortlessly through intersections that are engineered for heavy glass panels. The versatility of stack arrangements includes perpendicular stack, parallel stack, remote or curve & diverter.

Hinged Pairs Center Stack (Mata)

Hinged pair panels are panels hinged together in groups of two (2), unless otherwise specified. Panels are top-supported by one (1) carrier in each panel. The Center Stack arrangement provides panel storage at one or both ends of the wall's installed position.
