CATALOGUE

Saving space while securing maximum protection! – ovella systems – .

The ovella systems represents a revolutionary way of solving the problem of storing bicycles, tires and skis etc. Simply lift the bike up on the wall. The system is intended for active people who take care of their property and like order.

ovella racks and parkingsystems are needed everywhere;

- in apartment buildings, row-and one family- houses, garnisons, sports and leisure centers, schools etc.

The story of ovella started when the company founder's son's bike was stolen, while he was at band practice. This event was the motivation in the design of the company's products in order to control chaos and thieves. The company's strategy changed overnight from an office machine shop to a bike rack factory.

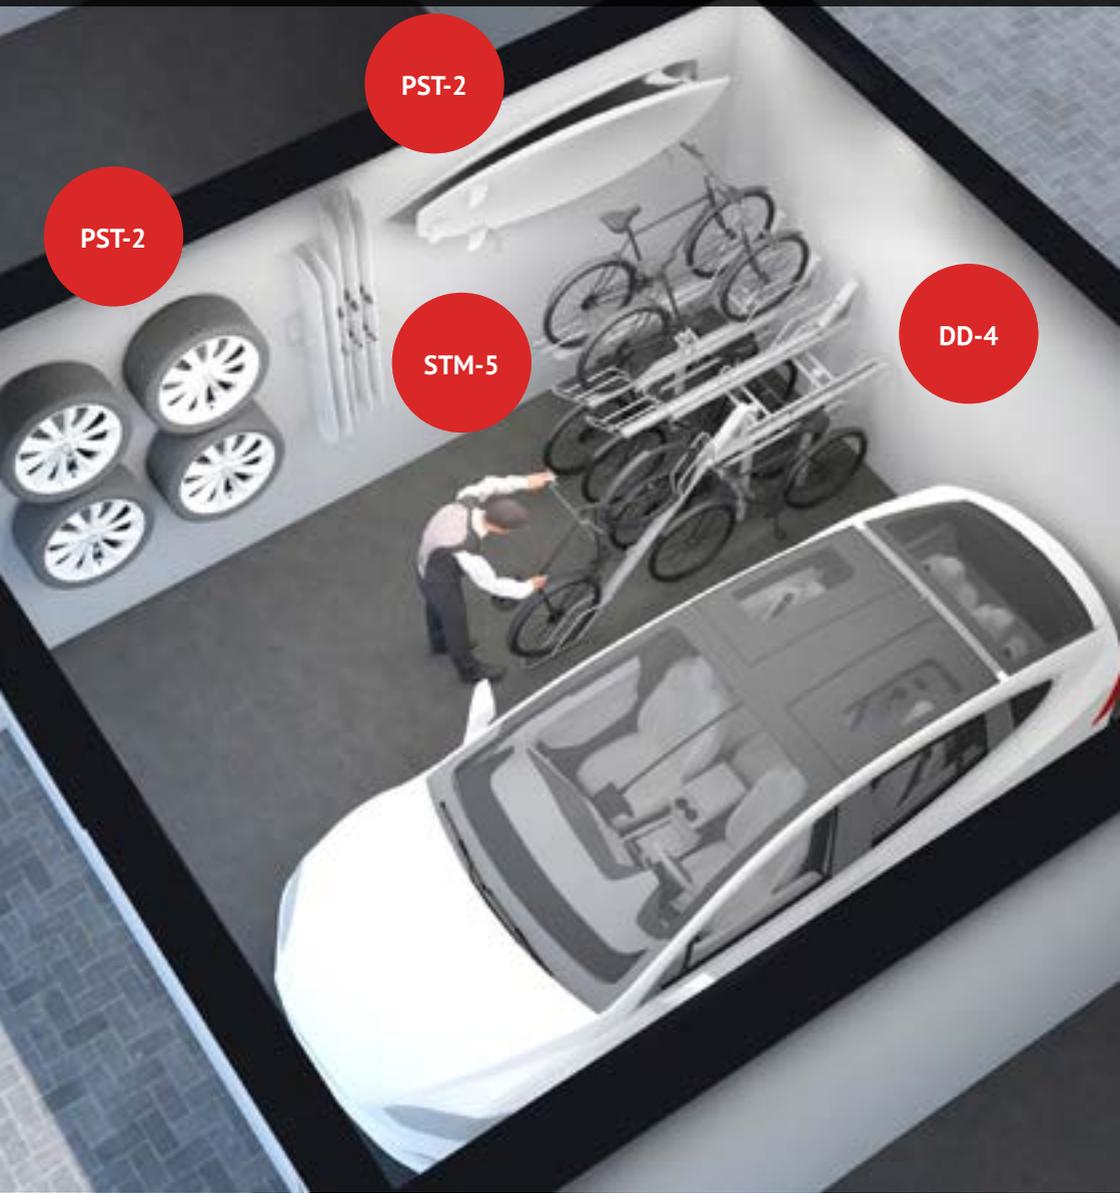

In 2000, the company developed the world's first mobile phone-operated bicycle parking system. Nowadays Ovella Systems Oy manufactures and markets parkingsystems for bicycles in buildings and out. Solutions have been delivered also to London and planned to Birmingham in Great Britain.

The ovella racks are easy to use, facilitate easy maintenance, safe and high quality. They are made of painted or galvanised steel. The solutions are efficient, safe and economical. The package contains installation instructions and mounting brackets when needed.

In this product catalog you can familiarize yourself with part of the selection.
