of the Griesser Group.

Griesser Aadorf, CH
Specialist in the manufacture of external venetian blinds and controls.

weinor Cologne, DE
Specialist in the manufacture of patio roofs/awnings for patios and conservatories.

Griesser Nenzing, AT
Specialist in the production of window shutters.

weinor Möckern, DE
Specialist in the production of awnings.

Griesser Carros, FR
Specialist in the production of facade awnings.

External venetian blinds.
Control sunlight –
just the way
you want it.

Vision Bois Construction | Eco Design Menuiserie

Live and work
in harmony with
sunlight.

With external venetian blinds from Griesser, rooms are set in the right light with no glare and no heat.

Depending on the requirements, external venetian blinds adapt to the desired interior climate and fit seamlessly into the overall picture of a building's architectural style.

In addition to providing the widest range of external venetian blinds, Griesser also impresses by ensuring outstanding quality right down to the smallest detail. Modern in design and sustainable in function, external venetian blinds are adapted to current and future demands in terms of sustainability. Whether enjoying the sun without heat or letting in warm light to save on heating costs, together with automatic control they ensure low energy consumption – for a sense of well-being while saving energy.

For colorful statements inside and outside.

Whether the external venetian blinds are color-coordinated with the respective facade or deliberately accentuating features, Griesser makes every color possible. And with BiColor, there are no compromises: Skillfully set accents with different colors inside and outside.

An energy-saving climate that fosters a sense of well-being.

In combination with an automatic control system, the incident heat is perfectly regulated with external venetian blinds from Griesser, thus optimizing energy consumption in the long term.

Living and working in the best light.

Thanks to the freely selectable slat position, the incidence of light can be determined exactly according to requirements. This turns Griesser external venetian blinds into a flexible solar shading solution.

Device against pushing up.

Some of our slat blinds are equipped with an anti-burglary device: High-impact protection and blocked slats that cannot be removed from the outside.

Facade awnings.
Puristic design –
highly efficient.

Modern look and optimal thermal protection.

In the development of the most modern solutions, Griesser draws on the experience and expertise gained over a period of 140 years.

The traditional company Griesser is considered a pioneer in solar shading. This also applies to the tailor-made facade awnings. These create a particularly harmonious interaction of light and heat.

The lightweight yet robust facade awnings combine modern design and high functionality in one excellent product. Combined with intelligent control solutions from Griesser, they can be used to regulate temperatures to create a comfortable climate and significantly reduce energy requirements. Whether for new constructions or modernization work, the textile facade awnings set attractive design accents and create a unique room atmosphere.

For the best result.

The high-quality, innovative fabrics of Griesser facade awnings protect against high temperatures and avoid interior decoration from fading due to the sun's rays. For an all-round coherent product, materials, textures and colors can be arranged as desired. We adopt a sustainable approach: Some of our fabrics are made from 85% recycled materials.

For reliability in wind and bad weather.

All Griesser facade awnings are wind-resistant. Many of them even withstand winds of up to 92 km/h. In addition, they are both dirt- and water-repellent, so that the joy of solar shading lasts a long time.

For the love of design.

With facade awnings to suit every taste, Griesser's wide range of products boast numerous possibilities for individual building design.

For a positive energy balance.

As much light as necessary, as little energy as possible: Griesser facade awnings create the optimal indoor climate for living and working, avoiding excessive heating and air conditioning. Combined with an intelligent control solution that is even 100% automatic.

For a clear view outside.

Depending on the fabric and system, a room can be darkened while a more permeable facade awning provides pleasant shade without blocking the view outside.

Window shutters.
From traditional to modern.
From discreet to accentuating.

Style-defining architecture and comfortable protection.

They set charming accents and turn a facade into a real one-of-a-kind. At the same time, they are uncomplicated and robust. Once installed, they are practically maintenance-free.

Shutters are enjoying a genuine revival. And for good reason: They provide protection from heat and bad weather, deter burglars and keep private things very private. As with all Griesser products, quality comes first with window shutters. All frames and edges are carefully deburred and sanded – for an allround flawless appearance.

The variety of Griesser models is unique. In addition to traditional wing shutters and modern sliding shutters as a reinterpretation of window shutters, there are also the folding shutters developed from these and the patented top-end pantograph shutters – exclusively from Griesser. Boasting pioneering technology, they become the architectural highlight of a building and create a stylish atmosphere with sophisticated lighting.

For more individuality.
Whether discreet or eye-catching, window shutters from Griesser ensure that no two houses are alike. The variety of models makes it possible to create a facade entirely according to personal taste – regardless of whether the solar shading is intended to make a visible design statement or be inconspicuously integrated into the overall architecture.

For long-lasting pleasure.
Griesser window shutters are designed to withstand a wide range of wind and weather conditions. Certified coatings guarantee a long service life and limitless pleasure – even after many years in use.

For the very highest standards.
The high-quality, stable Griesser window shutters inspire from the very outset. They are thought out down to the smallest detail and are therefore almost maintenance-free and particularly easy to care for.

For unique light.
Light control with window shutters offers many options. With movable slats for atmospheric shadow play. With wings that follow the sun. With fillings for blackout or individual cutouts.

For more sustainability.
Griesser is actively committed to the resource-efficient manufacture of sustainable products. The environmentally friendly window shutters are made of one-third recycled aluminum and contribute to a low carbon footprint. By moderating the heat and cold depending on the season, they create a pleasant indoor climate, avoiding air conditioning and excessive heating.

Rolling shutters.
An all-round
feeling of safety.

The good feeling of safety.

Rolling shutters from Griesser provide reliable protection from heat in the summer, from heat loss in winter and from prying eyes day and night.

Robust, reliable and straightforward, perfectly integrated rolling shutters emphasize the distinctive character of a building – for the good feeling of comfort and safety.

As Griesser's first product, the rolling shutter was first marketed in 1882 and has been continuously developed ever since. For over 140 years, it has stood for excellence in design and functionality. The guaranteed quality meets all requirements for privacy, security and comfort in both residential and public buildings. Perfectly adapted to requirements, the rolling shutters provide excellent darkening and are an indispensable energy-saving solar shading solution – fully automated on request.

For more protection.

Griesser rolling shutters are burglary-resistant, the bars are partially insulated. The optional locking device also prevents the unit from being pushed up and levered open.

For more privacy.

Rolling shutters from Griesser ensure that what is private remains private. Thanks to darkening and soundproofing, they contribute to a restful sleep and protect against prying eyes.

For the environment.

The Griesser rolling shutters are durable – a conscious decision for more sustainability. They soften summer heat and winter cold in equal measure and help avoid the need for air conditioning and excessive heating. Good for the climate, good for the environment.

For weather protection.

Rolling shutters keep wind and weather outside. Even in stormy conditions, a safe and secure feeling is guaranteed.

For purists.

Rolling shutters from Griesser fit seamlessly into the facade – whether built-in or with box. Ideal for those who like to keep it simple without sacrificing outstanding quality.

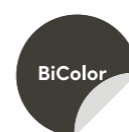

We love colors.

Throughout our more than 140-year company history, we have continued to refine the art of coloring first wood and then aluminum. Today, we have our own painting and powder coating facilities and control the entire coloring process.

Our portfolio includes more than 150 shades, ranging from ivory to purple-violet. We offer the full spectrum – so that our customers can design their solar shading the way they like it best. New colors are added every year. This means we are always in step with the latest trends.

Individual favorite color? We make it possible.

And if their favorite color is not there, our customers can even bring their favorite sweater or a sample of the desired wall color. We record the nuances with the color spectrometer and mix them individually for you. Thus, the solar shading can fit perfectly into the color concept of any architecture.

Individual with BiColor.

Slats, coated in two colors – inside is different from the outside. For example, a color can be selected for the outside, which allows the external venetian blinds to fit seamlessly into the visual design of the facade. The color on the inside, on the other hand, can be based on room-specific shades.

Extra coatings for extreme locations.

To prolong the life of external venetian blinds in maritime or heavily polluted regions, they should be pre-treated. Griesser offers the option of a special additional coating. It provides the slats of the product with additional protection and thus increases its service life.

Suitable for your region.

Regional architecture sometimes determines the colors for the exterior design of a house. We offer solar shading in all colors typical of a region as a standard service.

Proven quality.

All our coating and powder suppliers have been awarded the QUALICOAT quality label, which is valid worldwide.

Strong colors also for facade awnings.

We also offer an extensive selection of colors in the field of awning fabrics. Muted colors for a puristic, elegant style and trendy, fresh creations for clear color accents in facade design. And the best part: Part of our collection consists of up to 85% recycled PET bottles. And Griesser is the only company to do that. We embrace sustainability – with our awning fabrics too.

**Smart Home.
Smart Building.**
Feel good and save energy
at the same time.

EXPERIENCE
years
50
IN SMART BUILDING

SAVING
up to
40%
OF ENERGY

More well-being, more comfort and more sustainability with smart solar shading.

Smart Home. Smart Living. Sustainability live and work better – with innovative solar shading products and intelligent control solutions by Griesser.

The demand for comfortable, safe and energy-saving solar shading that can be individually controlled is increasing. An optimal combination of daylight and room temperature fosters well-being and performance while significantly saving energy – for a better quality of life and less energy consumption.

Griesser offers suitable automatic control solutions for everything from single-family homes to building complexes. The range includes both simple radio systems and sophisticated systems with extensive functions. Thanks to the Griesser app, operation is simple and intuitive – even without an Internet connection.

Smart Building:
Efficient and sustainable
building management.

50 years of experience in Smart Building.
Griesser is your partner for smart building management with over 50 years of experience. With our extensive expertise and passion for innovative solutions, we lead your projects to success.

Swiss Engineering.
Choose Swiss quality: with Griesser Smart Building, you invest in a high-quality product range developed and manufactured in Switzerland. Griesser Smart Building ensures long-term availability, flexible expandability, and maximum investment security.

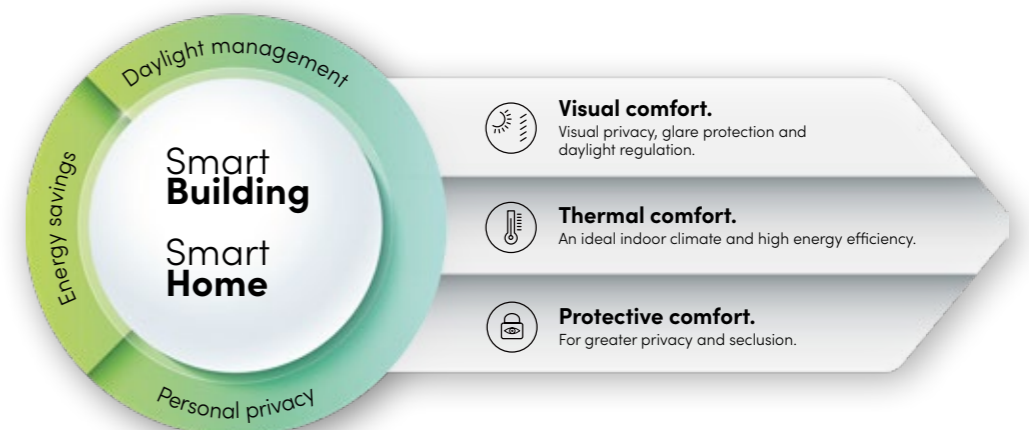

Saving energy & CO₂.
Smart Building minimizes operating costs. In summer, it reduces cooling energy consumption, and in winter, heating energy. Energy savings can reach up to 40%.

Smart Home:
The smart key to a sustainable,
healthy home.

Wireless controls with Griesser BiLine.
Easily control blinds and lighting via remote control, wall switch, smartphone, or tablet.

Excellent compatibility.
Griesser sun protection products are compatible with all common Smart Home technologies.

A man with short, wavy brown hair and a light beard is wearing black-rimmed glasses and a light blue button-down shirt. He is looking out of a window with horizontal blinds, which are partially open, allowing natural light to filter through. The background outside the window is a soft-focus view of green trees and foliage.

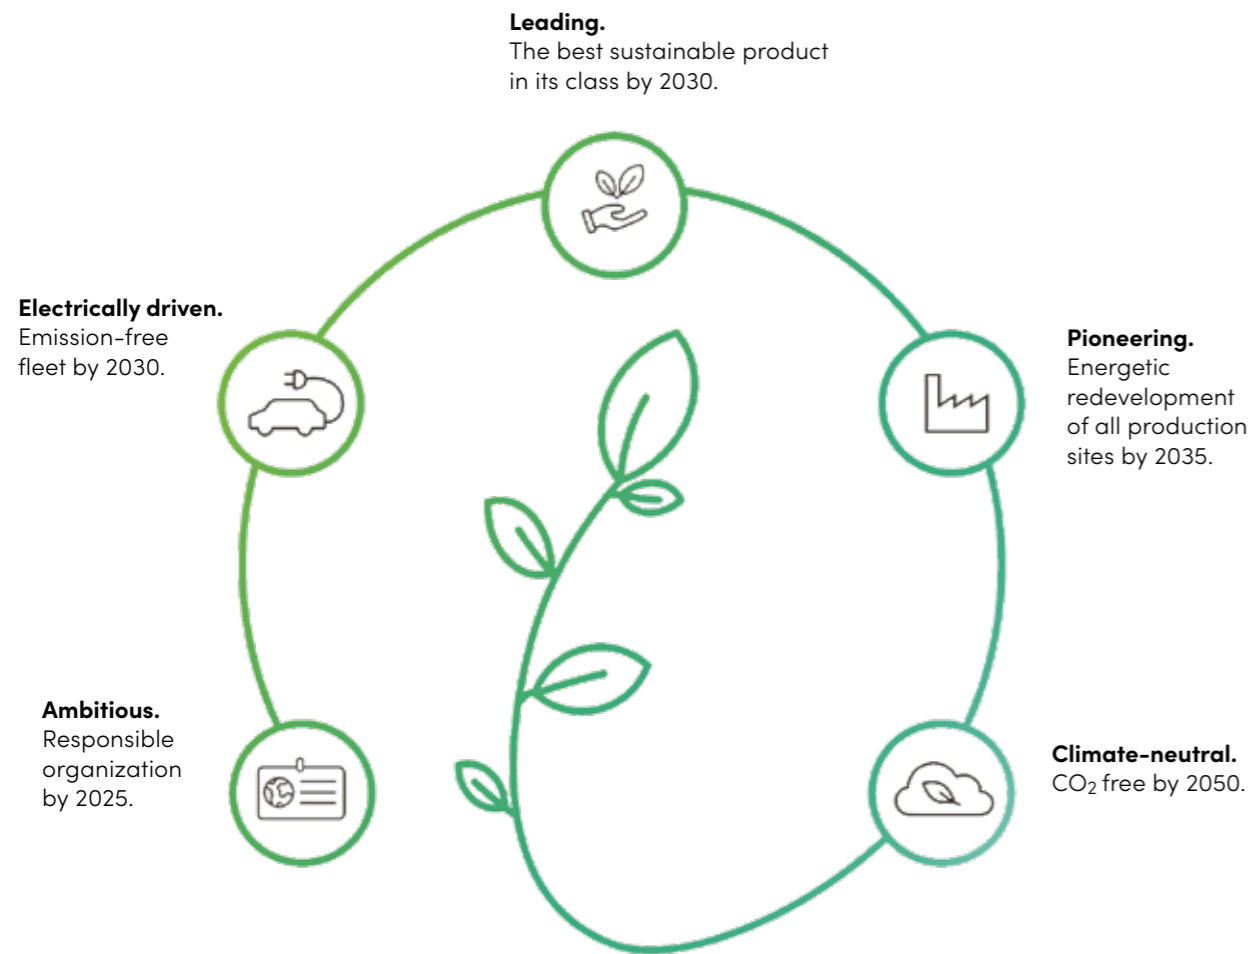

Our commitment.
Sustainable sun
protection solutions
for tomorrow.

Sustainably innovative.

Climate and growth in balance.

As a future-oriented company, we are aware of our responsibility towards nature and the environment. We align our actions with a long-term commitment to sustainability.

Innovative products from resource-saving production, targeted investments in sustainable building renovations and the conversion of our company fleet to e-mobility are just some of the essential characteristics that distinguish our company, which is oriented toward sustainable business.

We can only achieve the goals of our climate vision together. On the way to a climate-neutral future, we rely on cooperation with committed partners. Since 2008, we have been an active partner of myclimate, one of the leading providers of CO₂ offsetting and climate protection consulting. The renowned business association, Swisscleantech, is also one of our strong partnerships. As an active supporting member, Griesser has signed the charter for a CO₂-neutral Switzerland by 2050. But we are also active on the international scene: Since 2022, we have been a member of the UN Global Compact – the world’s largest association of sustainably operating companies and the United Nations.

-  **Smart strategy:** reduction of building energy by up to 40% with automatically controlled Griesser products.
-  **Sustainable construction:** largest EPD/FDES-certified product range in the sector.
-  **Proven recycling:** climate-neutral disposal of Griesser blinds for 15 years.
-  **For the future of the climate:** long-term partnerships with myclimate, swisscleantech and UN Global Compact, additionally targeted promotion of climate protection projects.
-  **Sustainable family business:** honored with the Family Business Award 2022.

We don't just talk, we take action. With our numerous commitments for the future, we demonstrate our determination. Learn more here about our efforts for a sustainable future.

Successful together.

On an equal footing with our specialist partners.

For our partners, we want to be more than a manufacturer of high-quality products. We know the individual needs of our customers and place them at the center of our actions.

In close and valuable exchange with our specialist partners, we do our utmost to offer them the best possible service today and in the future. To this end, we support our specialist partners in all phases of the sales process and beyond.

With our diverse service portfolio, we are at your side from the initial customer contact through the quotation phase and ordering process to delivery, installation and repair – for successful Griesser specialist partners and satisfied customers of a brand steeped in tradition.

Personal advice digitally and on-site so that our specialist partners can offer their customers the best service.

Guaranteed availability of spare parts for at least 15 years with special warranties.

Retrofit support with intelligent control systems to be able to show customers the benefits of smart, energy-saving control solutions from Griesser.

Griesser Academy with training, education and continuing education services such as product and installation training for long-term success. Sustainable learning: Combine theory and practice, exchange ideas with experts and get ahead together – online or on-site. Additional events and programs are offered at Griesser sites.

MyGRIESSER

Service portal for our specialist partners: The MyGriesser digital service platform includes many helpful features such as the product configurator with direct ordering function, clear tracking of quotations and orders, uncomplicated spare parts ordering and sales support tools. Available around the clock, MyGriesser has already successfully established itself as a self-service portal in some countries, with other markets to follow.

Direct exchange.

Hand in hand
with architects.

It takes a manufacturer that can combine an extensive product range with unique control solutions to provide architects and building designers with suitable recommendations for specific architectural requirements. Griesser is the ideal partner for this task thanks to its long-standing experience, high level of consulting expertise and excellent product diversity.

With its comprehensive know-how, Griesser supports architects and building planners in the important tendering process.

Close cooperation from the start of a planning process and our coordinated products and control solutions make it easier for architects and planners to prepare quotes that are accurate to requirements. With our services, our goal is to give architects and planners an all-round feeling of security throughout the entire process.

Support for the efficient planning of customer projects through demand-oriented services relating to solar shading solutions for building facades.

Provision of construction-, product- and energy-relevant data for all Griesser products as well as wind load calculations relating to the respective building – tailored to individual space and building planning.

Optimal advice with the help of calculation tools and measurement data based on intensive research work. Development of solutions that meet all requirements for statics, standards, energy efficiency, glare protection and sustainability – tailored to the respective planned building.

«Cap Mail» residence in the heart of Rennes (FR). The impressive building of the architect Jean Nouvel inspires with large-scale Patios, conservatories and plant walls – and with high-quality solar shading from Griesser.
