

ENTRANCE SYSTEM

HEYMAT[®]

Designed for high traffic areas

Customisable design

Easy to install

Outstanding durability

Unique functionality

Improves acoustics and air quality

Sustainably produced

Whether it is a place to live, work, or play in; how a space feels, functions and flows is about more than just how it looks. Specifically designed for larger, high traffic areas, the Heymat Entrance System is made with practicality and purpose in mind.

Exclusively created by Kristine Five Melvæ and taking inspiration from Japanese gardens, the tiles come in three colours and pattern types so their overall design can be tailored to compliment a project perfectly.

Thanks to their textured three-dimensional surface they provide a unique scraping and absorption effect, allowing mud and moisture to run off while simultaneously locking dirt and sand into the pile, ensuring the floor surface stays clean and dry.

Made from the highest quality 100% recycled plastic (PET) and backed with non-slip rubber, they are also easy to install, maintain, and absorb sound and harmful airborne particles, making any building a happier and healthier place to be.

Heymat Entrance system received the prestigious Red Dot Award in 2023

Ideal for hotels, offices, or showrooms, enhance the expression and experience of larger entrance areas.

Available in three colours and three subtle styles, use our pattern tool to create your own unique design. heimat.com/proffesionals

Produced from 100% recycled plastic (PET), a durable material with great absorption that dries quickly.

Design by Kristine Five Melvær

We've collaborated with Kristine Five Melvær for many years. Known for her Scandinavian simplicity, Melvær creates products that appeal to the senses, including tableware, furniture, lighting, textiles, and graphic design.

The Heymat Entrance System is a new interpretation of Melvær's award-winning 'Sand' doormat design for Heymat, transformed into three unique tiles that can be combined in infinite ways. This allows each customer to create a unique pattern tailored to their space and preferences. "The three-dimensional pattern is both tactile and meditative, creating a harmonious indoor landscape, whether in a private home or a public entrance," says Melvær.

I value long-term collaborations with manufacturers. Building mutual trust allows us to take risks and create more exciting products," explains Melvær. The Heymat Entrance System embodies this philosophy, proving that public buildings can also have well-designed entrance areas.

In 2023, the Heymat Entrance System received the prestigious Red Dot Award, highlighting its innovative design and functionality.

Colours, Components and Tile Specifications

VC Vertical & Circular

HC Horizontal & Circular

S Straight

Tile specification

Dimensions: 45X45 cm
Thickness: 10mm(+/- 1mm)
Weight: 1035 g
Textile: Needle punched
100% recycled PET
Backing: SBR rubber (20% recycled)

reddot winner 2023

Area of application

Entrance areas and corridors indoors and outdoors under roofs.

Installation

Wall to wall, embedded in a mat well or top-mounted. The tiles can be easily adapted to different rooms. Fasten with glue or double-sided tape.

Maintenance

Daily cleaning is carried out easily with a vacuum cleaner. Periodic cleaning with carpet cleaner.

Use classification:

33 – Heavy Commercial
EN 1307

Castor Chair:

A – Intensive use
EN985

Life Cycle Assessment:

EPD

Underfloor heating:

Approved

Flame retardancy:

Low degree of ignition
EN ISO 9239-1

Airborne sound absorption α_w :

0,15 α_w
ISO 11654
