ABOUT FLETCO CARPETS

Quality, craftsmanship and innovation

Since 1947, proud craft traditions combined with a passion for innovation and a sustainable approach have been at the heart of Fletco's production of high-quality carpets. Founded as a family-owned business, Fletco is mindful of the company's proud heritage and guided by the values that have driven development since day one: precision, quality, innovation and care for the environment at every stage of the process. We always strive to be at the forefront of technological advances and new environmental standards.

Danish production and in-house test lab ensure long durability

Today, Fletco Carpets is a specialist in flat-woven carpets and one of Europe's leading suppliers to the international contract market. The company is also both an OEM (Original Equipment Manufacturer) and White Label manufacturer of carpets for many high-end design brands around the world. In addition to weaving and tufting, our production facilities also include dyeing, backing and an in-house test lab. Our top priority is to see quality materialized in every single carpet. Backings made of eco-friendly felt, textile or foam along with unsurpassed stability and first-rate wearability are key elements in ensuring the long durability of a Fletco carpet.

Weaving craft with a human touch

We are proud of our modern, advanced production equipment, with looms and tufting machines that have been continually developed to produce carpets in the most rational and efficient way. The same is true of the other high-efficiency machines we use to produce the carpets. However, even the most technically advanced looms require skilled human operators who master their craft to perfection. Keen eyes monitoring the machines, deft hands threading them manually – and rethreading them if the strand breaks – and, not least, experienced and creative master weavers who create Fletco's timeless yet distinctive carpet design based on carefully selected materials, functional priorities and the full potential of the loom.

From yarn to carpet in subtle colourways

Creating world-class carpets requires top-quality raw materials. That is why most of our carpets are made from our own proprietary yarns made from white filaments or fibres that are intermingled and twisted. We do this to ensure the high level of quality and subtle colourways that have become hallmarks of Fletco carpets. To avoid waste, meet individual customer demands and ensure fast delivery, most of our carpet designs are woven in white yarn. Subsequently, the carpet is dyed in our own plant, where we can dye the precise amount required for a specific project, whether the order is for 200 or 20,000 square metres.

OVERLOCK ◆

– rug binding with a 9 mm overlock finish

The overlock binding is a visually appealing and highly durable form of rug edging, featuring a finely crafted 9 mm-wide polyamide finish. This detail is both functional and aesthetically pleasing, giving the design a harmonious, finished look. The overlock finish is always tone-on-tone with the rug colour.

Overlock binding is available for shapes marked with ◆.
Overlock is approved for indoor and outdoor use.

UNIQUE ▲

– rug binding with an 8 mm edge band

Unique is a narrow and refined edge finish made from 100% polyester, overlapping the rug by approximately 8 mm. The ideal alternative for those who appreciate clean lines.

The finish is always supplied tone-on-tone, giving the rug a minimalist and contemporary look.

Unique binding is available for shapes marked with ▲.
Unique edge band is approved for indoor and outdoor use.

BORDER ★

– rug binding with a 30 mm-wide cotton border

Featuring a 30 mm-wide cotton border with precisely crafted mitered corners, this edge finish is available in eight appealing colors.

The timeless design and 100% cotton composition give the rug a distinctive touch while ensuring the perfect balance of aesthetics and durability.

The 30 mm border binding is available for shapes marked with ★.
Border binding is approved for indoor use only.

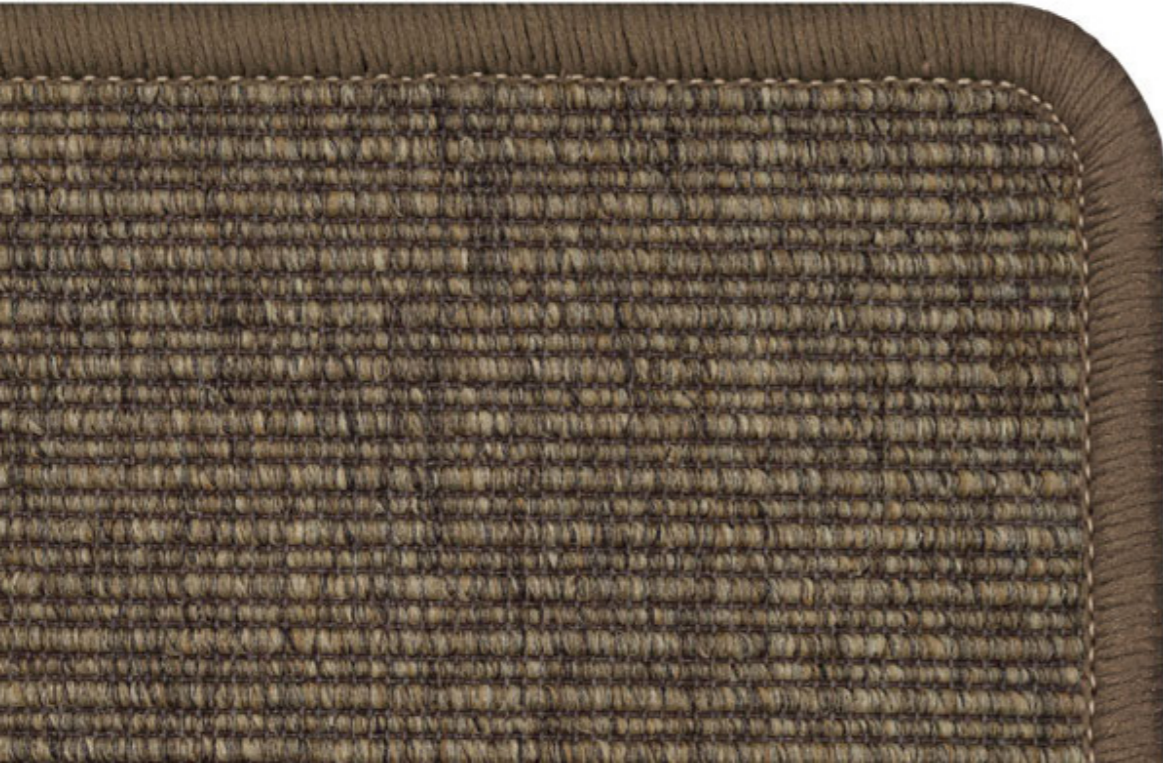

For each shape, you will find a model number and a factor value. The factor is used to ensure the proportions if you wish to scale the model up or down, as well as to calculate the square meters and price.

400 CM MAXIMUM WIDTH: Multiply desired width with factor for length.

A SUSTAINABLE FOUNDATION

TAKING THE LEAD WITH ATTENTION TO DETAIL

We believe firmly that using nature's resources in manufacturing obliges us to be as responsible as possible. This means that top quality is a key priority in every part of our product development and manufacturing processes. To us, sustainability is not an abstract concept but a concrete part of what we do every day.

We take the lead by embracing new production methods and materials with the ambition of going above and beyond the current standards in the carpet industry. And we go into detail to create durable carpets based on versatile, classic designs and uncompromising quality standards to make sure they will stay beautiful for many years to come. To us, this is the essence of sustainability.

We use recycled materials whenever possible: the carpet backing is made of recycled plastic bottles, the carpet tubes are made of recycled plastic, and even the smallest bit of yarn is recycled along with cardboard and other scraps from our production to avoid wasting resources. Since 2016, we have contributed to the green transition in Denmark and bought fully CO₂-neutral wind power equivalent to our annual energy consumption.

CERTIFICATIONS AND COMMON SENSE

WE TAKE RESPONSIBILITY FOR PLANET AND PEOPLE

Regard for the environment is part of our DNA, and as a responsible manufacturer, we produce carpets with many of the general certifications designed to help architects, distributors and consumers around the world choose sustainable products. However, certifications are only part of what makes Fletco's carpets a safe and responsible choice when it comes to looking after both global and indoor climate.

We take responsibility for planet and people by creating quality products with long durability and – across all our certifications – using common sense as our most important guide in navigating the complex concerns in relation to total climate footprint and environmental impact.

GOLD FOR COMFORT AND INDOOR CLIMATE

WE CARE ABOUT INDOOR CLIMATE AND AIR QUALITY

Thanks to our innovative production equipment, all our carpets are made without the use of bitumen, PVC, PFAS or other harmful substances that have traditionally been part of carpet production.

We care about indoor climate and air quality, with low emission of air pollutants as a key factor. All our contract carpets carry the Eurofins Indoor Air Comfort Gold label for complying with the strictest requirements for the emission of VOCs (Volatile Organic Compounds). This umbrella certification encompasses the most significant and far-reaching voluntary European environmental certificates, including Cradle to Cradle, the Nordic Swan Ecolabel, Danish Indoor Climate Labelling and, partially, M1. The Eurofins Indoor Air Comfort Gold certificate is thus accepted on a par with voluntary international environmental certifications such as BREEAM and LEED in environmentally sustainable construction.

BECAUSE WE PROTECT THE ENVIRONMENT

OUR CONTRIBUTION TO THE GREEN TRANSITION

Wind-generated electricity causes no CO₂ or particle emissions. In order to contribute to the green transition in Denmark, our production facilities are powered by fully CO₂-neutral Danish wind energy.

In 2020, we installed a geothermal system to reduce our consumption of fossil fuels. Most of the waste heat from our production facility is captured and utilized. For example, we recover and use heat from our tile production and compressors to heat our buildings.

We are continually looking into new possibilities, and when we develop new carpet qualities, we always aim to reduce our CO₂e emissions without compromising on quality.
