

Intelligent Door Solutions
Everything from one source

BUTZBACH - THE DOOR COMPANY.®

THE DOOR COMPANY.

We build doors. Industrial doors. Hangar doors. Sectional doors. Stacking doors. High-speed doors. Large doors. Small doors. Fast doors. Secure doors. Customised doors. Above all, we build durable and high-quality doors.

With over 70 years of market experience, we know what our customers want and offer the right hangar doors, high-speed doors and industrial doors for every requirement.

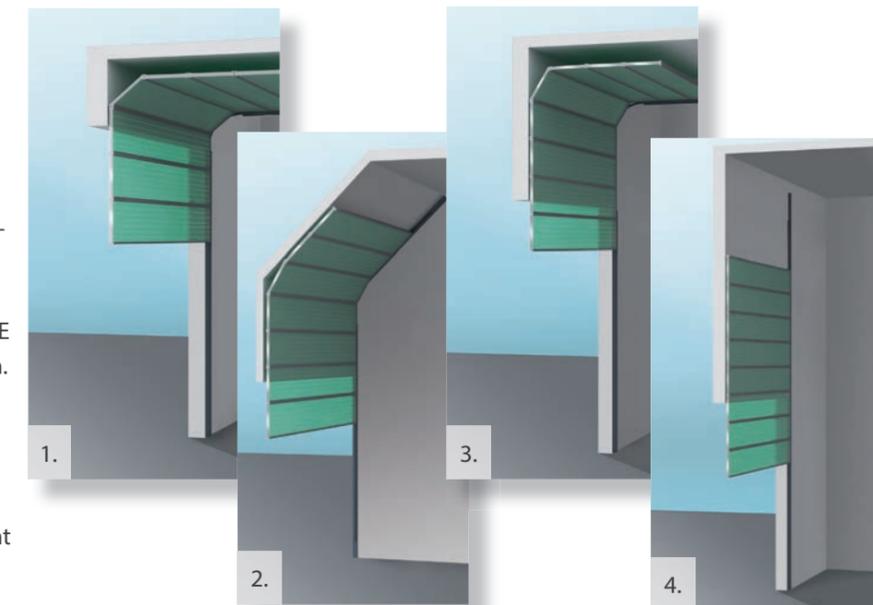

Through our dimensionally accurate planning and manufacturing, we guarantee lasting reliability - Quality engineered and made in Germany.

Opening principle Sectional doors **SECTIOLITE**[®]

You can install the SECTIOLITE in different ways depending on the installation situation:

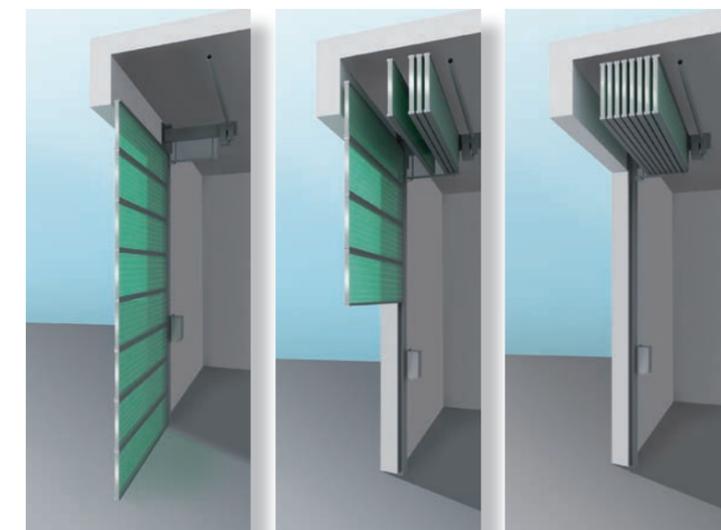

1. The door sections are deflected under the ceiling and guided into the hall interior. A lintel height of only 350 mm is sufficient for this.
2. By using a roof tracking fitting, the SECTIOLITE adapts to the geometry of your ceiling design.
3. For large lintel heights, a higher-guided deflection ensures that the room height can be used almost to the full.
4. The SECTIOLITE can also travel upwards as a vertical runner without deflection if the height above the door opening allows this.

Opening principle Stacking door **SPACELITE**[®]

When opened, the door elements line up vertically and compactly behind the lintel. Thanks to the wall mounting without ceiling suspension, the door is suitable for almost all installation situations - in new buildings and renovations.

SPACELITE stacking doors can be installed in dimensions of up to 25 metres wide or 24 metres high.

Translucent and durable. Stacking doors **SPACELITE**[®] Sectional doors **SECTIOLITE**[®]

The SPACELITE stacking door is characterised by its innovative and space-saving opening technology behind the lintel, while the SECTIOLITE sectional door scores with its storm resistance and speed.

Both doors are united by the door infill:

Fibreglass - a material that, thanks to its positive properties, is also used in shipbuilding and in the aerospace industry. In addition to properties such as stability, durability, thermal insulation and load-bearing capacity, Butzbach's fibreglass is particularly impressive due to its translucency.

At Butzbach, fibreglass has been used as a material for industrial doors, hangar doors and façade elements for more than 40 years and has been permanently developed further since then.

Horizontal, fast, safe. High-speed doors ECOSPRINT® | NOVOSPRINT®

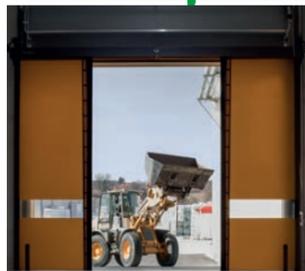

The horizontal opening principle of our high-speed doors ensures fast and trouble-free passage, because the door leaves roll up in seconds and immediately release the full passage height.

This results in less heat loss than with vertically opening high-speed doors, and the high speed virtually eliminates collisions.

**ECOSPRINT Syncro
NOVOSPRINT Syncro**
The door leaves open
synchronously to the side.

NOVOSPRINT Duo
Two door leaves that can
be activated independently
of each other.

NOVOSPRINT Syncro L/XL
Openings up to 9 m wide
or 6 m height.

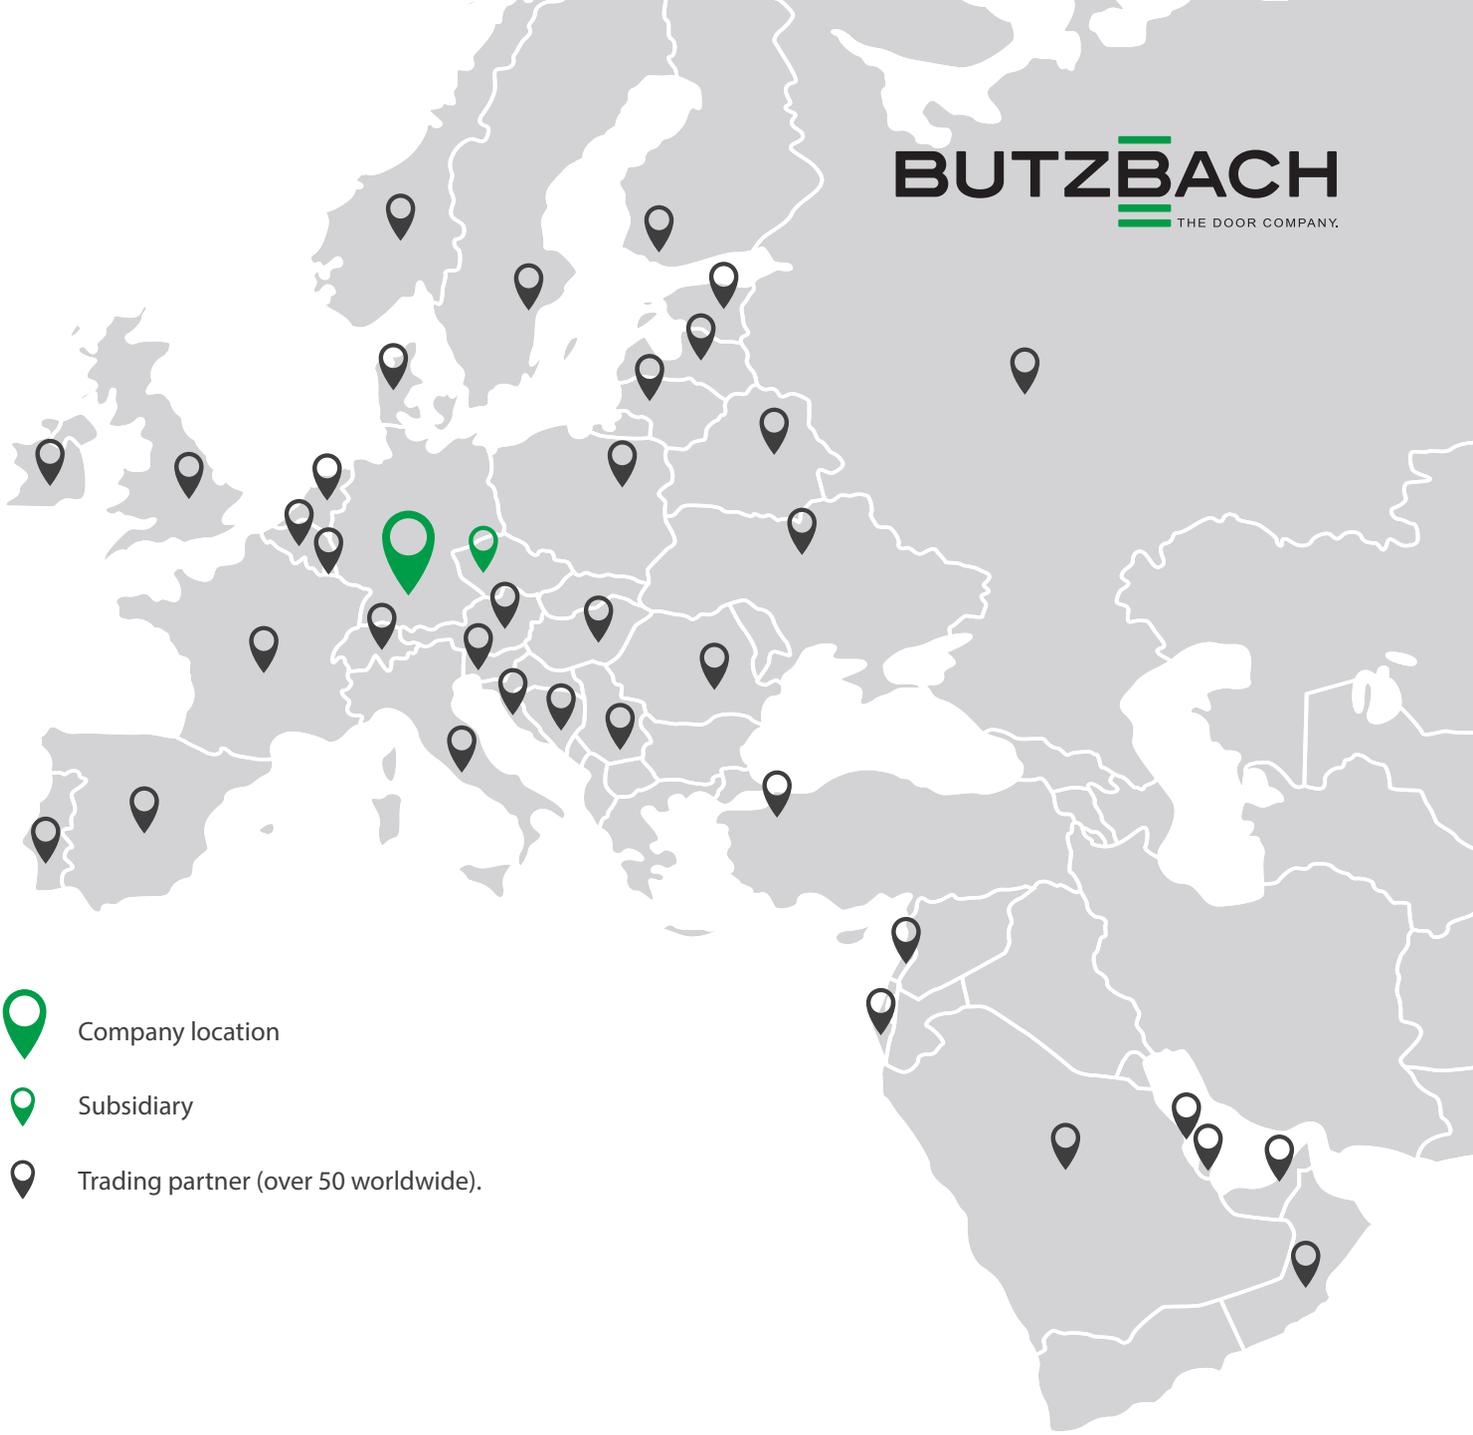

**ECOSPRINT Mono
NOVOSPRINT Mono**
One-sided rolling
door leaf.

Show size. Hangar Doors

The work processes in an aircraft hangar are demanding. They demand the highest level of organisation, efficiency and reliability from people and technology. As a globally sought-after manufacturer of hangar doors, Butzbach creates the best working conditions in aircraft hangars and at airports with its products. Our hangar doors can reach dimensions of up to 400 metres wide and 30 metres high.

We support you in all planning considerations right from the start. We advise you on the size and location of your hangar door as well as on the opening principle, drive type and choice of infill material. In doing so, we take into account all the safety features relevant to you as well as your architectural and design requirements. Our specialists are personally available to you as competent partners for all questions regarding the design and planning of your hangar door.
