Urban vegetal street furniture for you

2025 issue

**LET'S BRING
NATURE
TO THE CITY!**

ATECH has been producing street furniture and planting solutions in France since 1986. We help you create more sustainable, resilient green spaces and cities.

A SPONGE CITY SOLUTION IN THE GROUND

To address the environmental challenges of today, we offer solutions that include bottomless planters or rain tree kerbs. These systems make it easier for water to infiltrate the soil and contribute to sustainable water resource management.

BRING NATURE INTO BUILT-UP ENVIRONMENTS

When you cannot plant directly in the ground, raised planters are an effective means of achieving urban greening. However, efficient water management is needed to reduce maintenance costs and water consumption. With our connected systems, we control the wetting and drying cycles for root systems and substrates. We help you optimise water use so you use less and don't water unnecessarily. Our products are suitable for every situation, whether for town squares, streets or roadways, schools, ecodistricts or green belts.

COMPLIANCE WITH THE FRENCH ANTI-WASTE AND CIRCULAR ECONOMY LAW (AGEC)

We are proud to fulfil our obligations under this law by using recycled or reused materials. Our life-cycle analysis (LCA) approach includes repainting and upcycling plant pots, flowerboxes and hanging baskets, which reduces your carbon footprint.

For more than 35 years, we have worked closely with landscape professionals to bring nature back into urban areas. Drawing on the local know-how we honed in Cholet, France, we constantly innovate and work with you.

Let's work together to bring nature into the city.

Thomas Bourgeois-République,
ATECH CEO

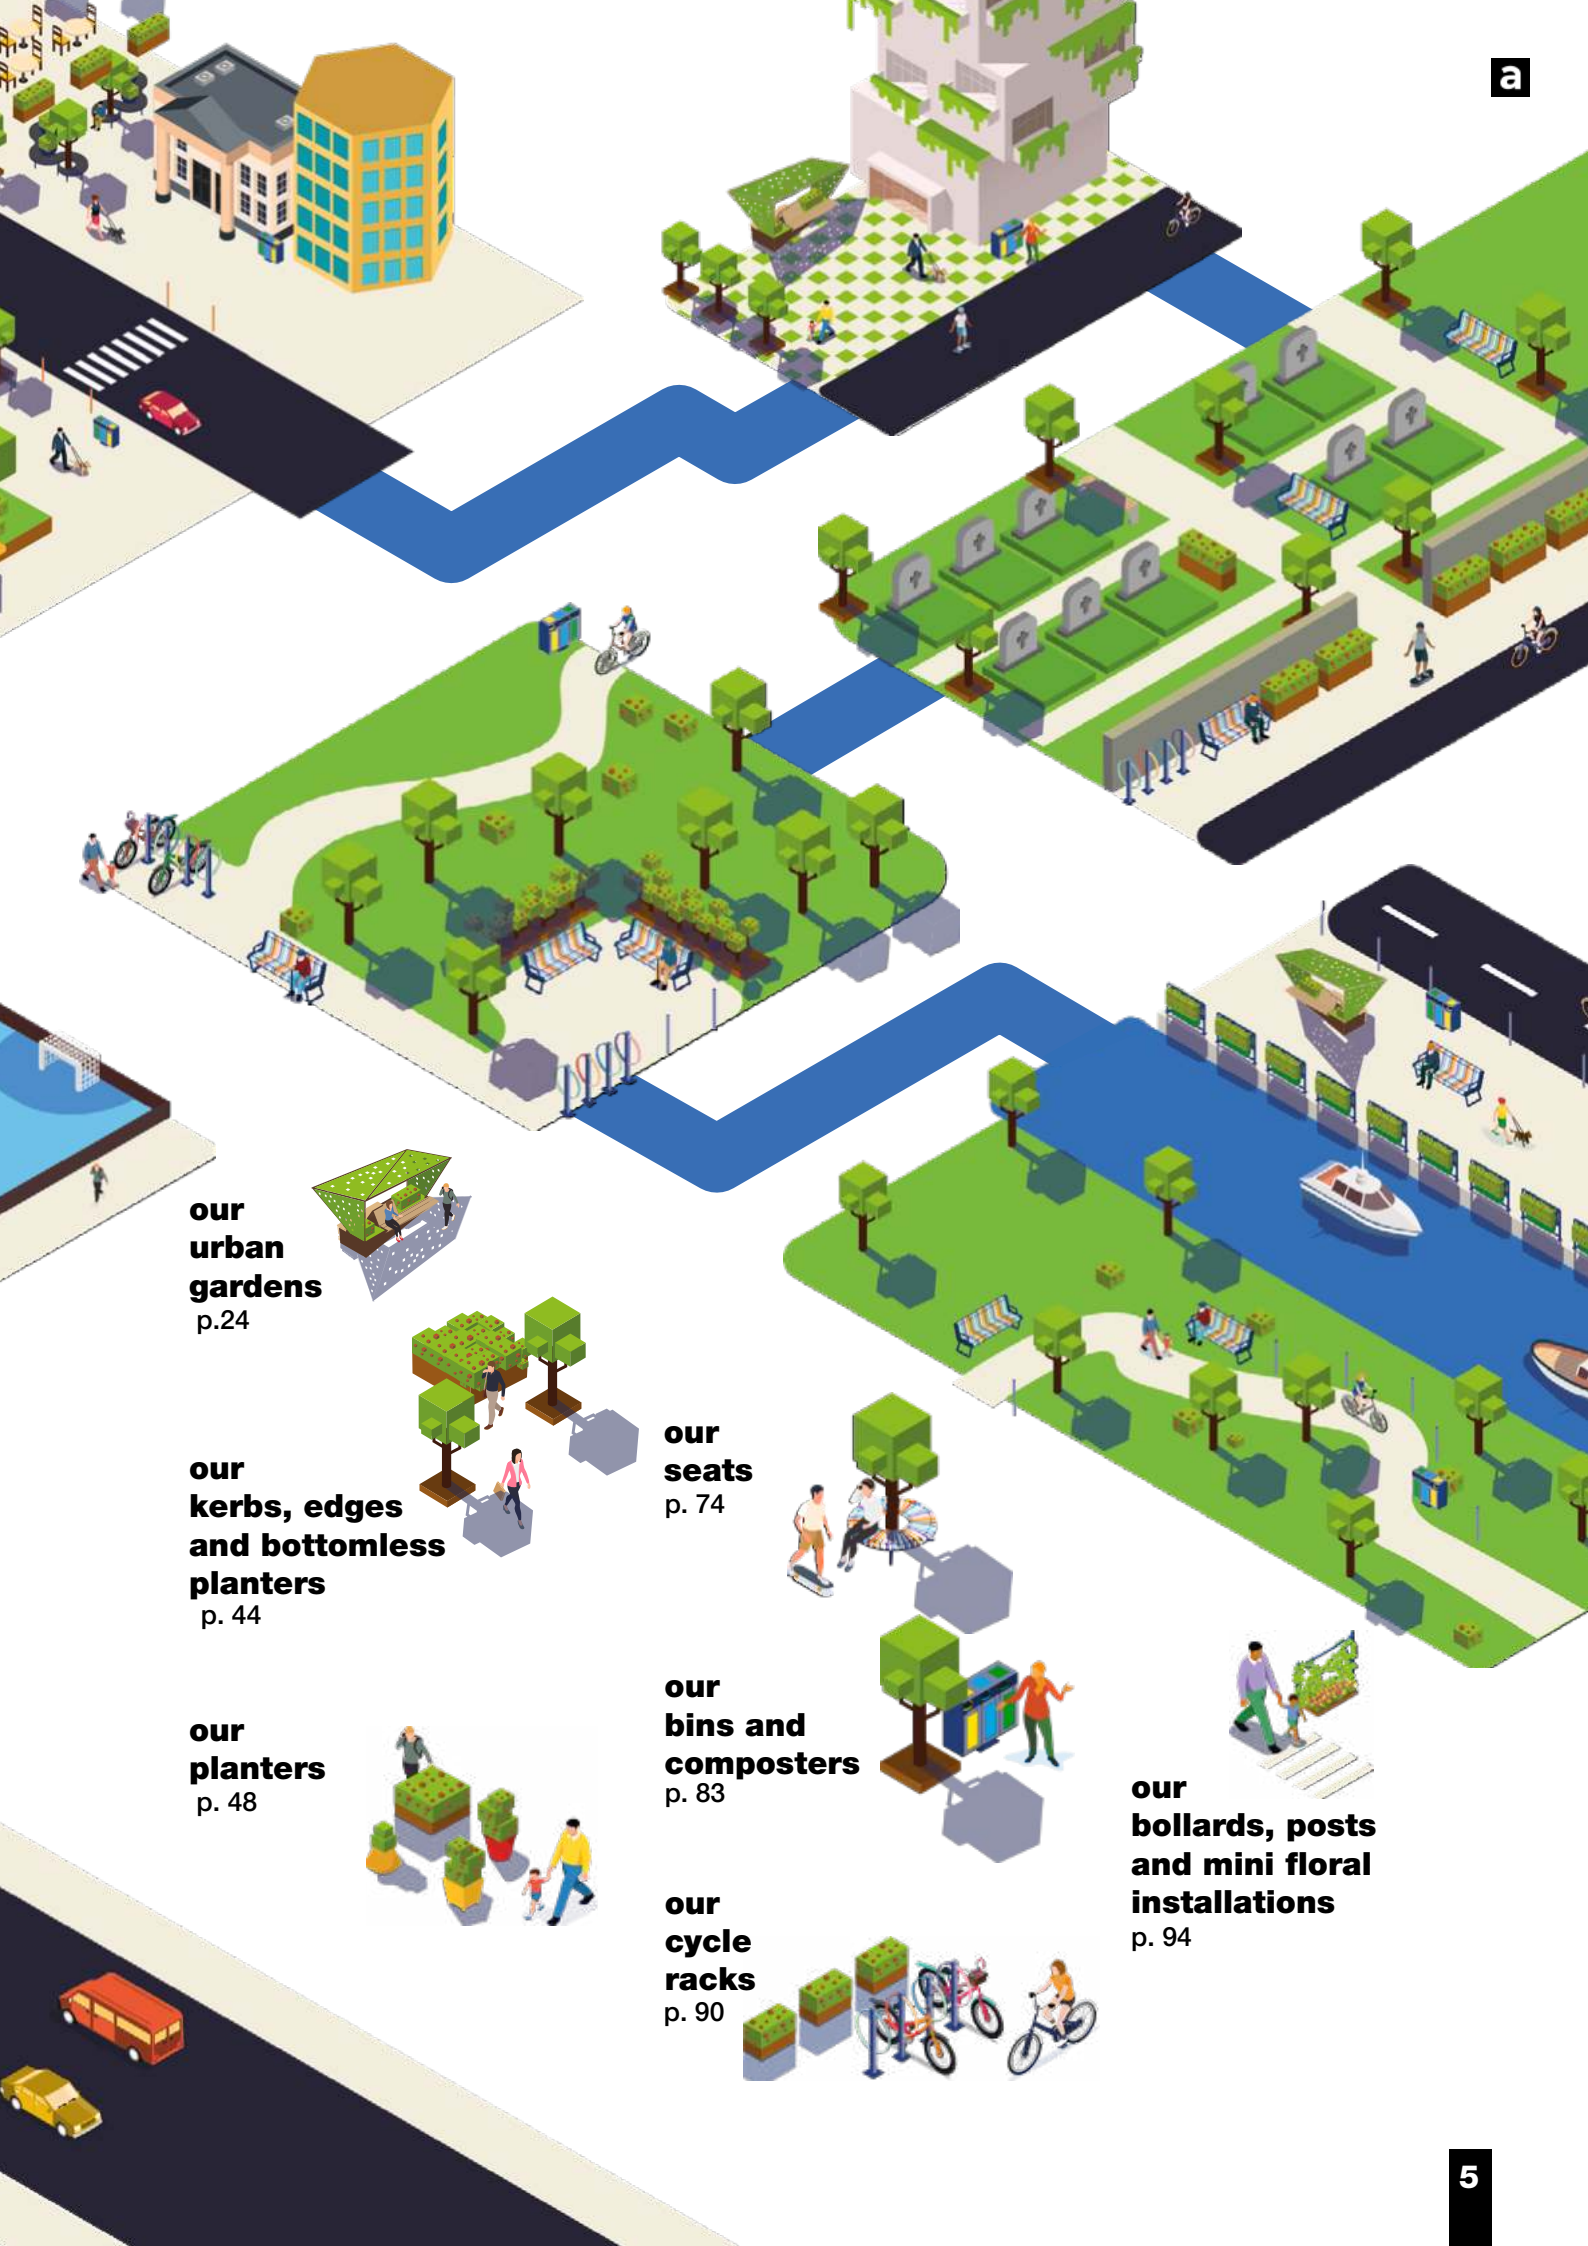

Together, let's create a sponge city where integrated water management aligns with water cycles.

A vision of plants and greenery in sustainable cities.

our solutions to facilitate water management

HOW CAN YOU REDUCE MAINTENANCE COSTS, HAVE A HIGH-QUALITY LOOK AND SAVE WATER?

Because you can't always plant in the ground itself, planting above ground is another way of bringing nature back to urban areas.

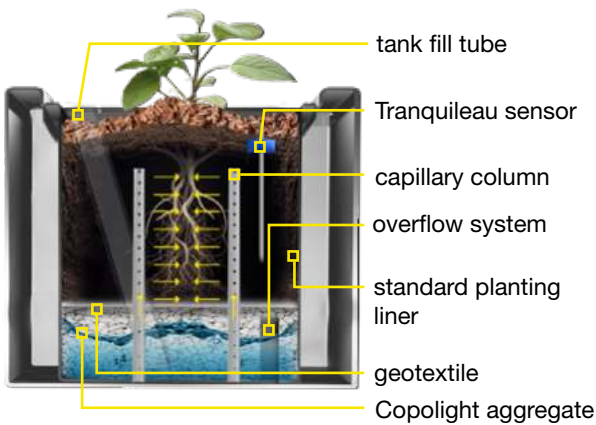

Learn about Tranquileau, a tool you can integrate into **sets of planters**. It checks and determines water needs in the root zone using a soil moisture sensor, which will improve the plant's resilience and ability to thrive on its own.

water tanks for **planters and pots:**

existing **planting liners**

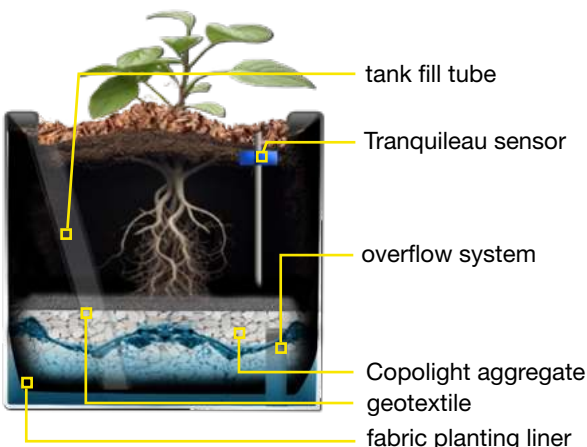

- reduce watering frequency
- avoid unnecessary rounds
- save water

planting liners **with capillary columns**

- reduce watering frequency
- avoid unnecessary rounds
- save water

💡 **Plants can be changed**

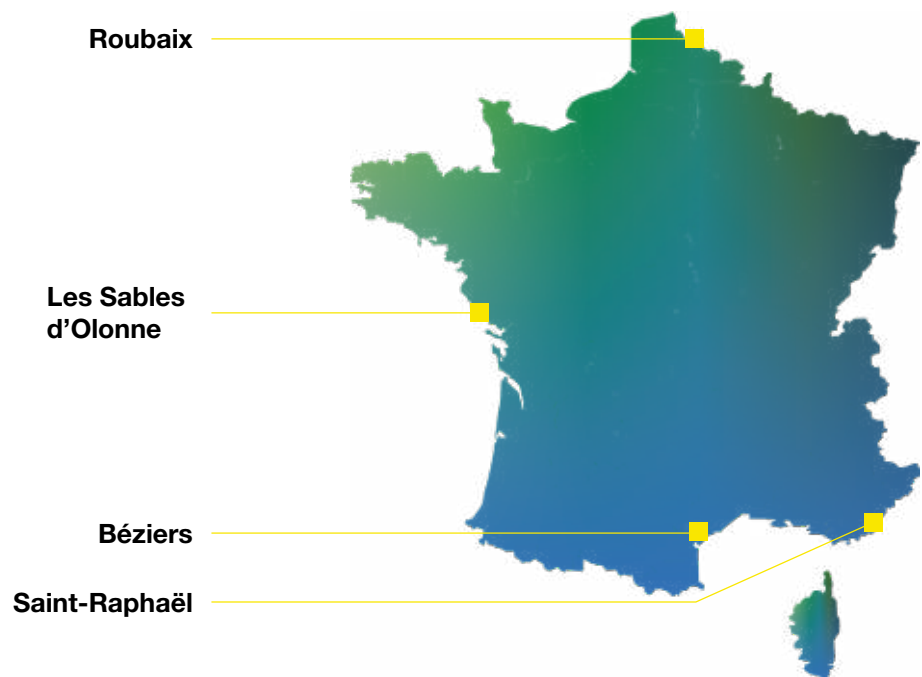

planting liners **garden**

- reduce watering frequency
- avoid unnecessary rounds
- save water

💡 **More substrate**

Watering frequency results for planting liner No. 3 – Summer 2024

Over the summer and across France, we tested the different water tank options we offer for our planting liners. See the results in the planting liner technical data sheet below.

option : **Tranquileau system**

Our Tranquileau solution on a set of Dualis planters resulted in **50% less watering.**

planting liner with **capillary columns** and Tranquileau option

Our Tranquileau solution on a set of Dualis planters resulted in **60% less watering.**

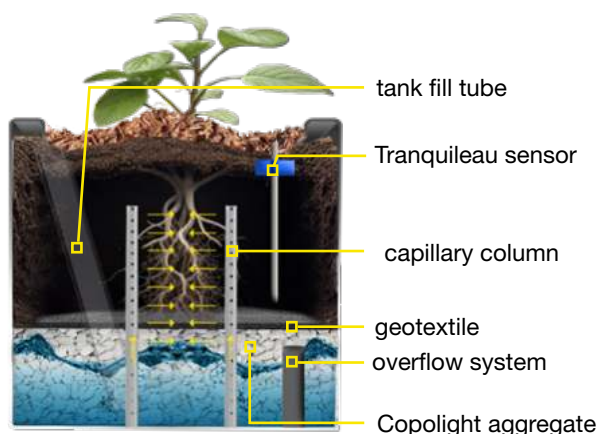

planting liner for **gardens** and Tranquileau option

Our Tranquileau solution on a set of Dualis planters resulted in **70% less watering.**

metals and finishes

STEEL

Available colours with RAL or AkzoNobel reference.

Steel is an alloy that contains iron and carbon. It is primarily known for being highly robust. It must be treated before a finish is applied. Available finishes: **grainy powder-coated (sandblasted), gloss or matte.**

STAINLESS STEEL

Stainless steel is an alloy that contains iron, chromium and carbon. It is primarily known for being particularly resistant to corrosion. Available finishes: **brushed, mirror polish.**

CORTEN STEEL*

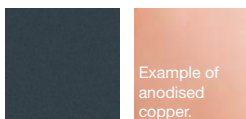

Corten steel is an alloy that contains copper, chromium, nickel-molybdenum and phosphorus. It is a natural material with a protective layer known as a patina, with different hues of brown over 18 months before it takes its final colour.

Throughout the process, light and temperature can cause colour changes. Available finishes: **sandblasted** (to accelerate the patina), **activated and sandblasted** (for a product with a patina-look overall), and activated, sandblasted and stabilised (to stop the patina and not stain the ground). There are two techniques for this last finish: the product is either stabilised naturally (**sandblasted, activated and naturally stabilised**), in which case the process lasts around 4 months (with steel painted with the sandblasted Mars 2525 finish an alternative) OR the product is varnished with a matte finish and fired in a furnace (**sandblasted, activated and stabilised (matte)**), with steel painted with RAL 8017 an alternative.

ALUMINIUM

Available colours with RAL or AkzoNobel reference.

Aluminium is a lightweight material that is highly resistant to corrosion. It is also highly malleable, making it ideal for curves or various creative shapes. Available finishes: **powder-coated (grainy, glossy, matte), brushed, anodised (glossy or satin) or polished and anodised.**

ZINC*

Zinc is known for being highly resistant to corrosion. Our zinc products come as panels riveted onto a galvanised steel assembly to optimise costs. Available finish: **pre-patinated.**

* Tubes cannot be made using these materials

seats

TREATED BAMBOO

UNTREATED EXOTIC WOOD

UNTREATED ROBINIA

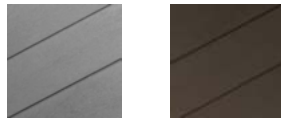

UNTREATED LARCH

Options: wood stain, paint, wood saturator

DUALIS RANGE WOOD STAINS AND PANELS

PASTEL RANGE COLOURS

ATECH backs the French AGEC law (Anti-Waste And Circular Economy Law)

Article 58 of this law sets new targets for municipalities from July 2024 on. Whenever street furniture is purchased now, 5% of the annual amount (excluding taxes) of public-sector contracts must go to upcycling or reuse and 20% to furniture made of recycled materials. This percentage will change over the years, as seen in the chart below. This is also true for waste collection equipment.

Change in annual targets in %, annual amount of public-sector contracts excl. taxes:

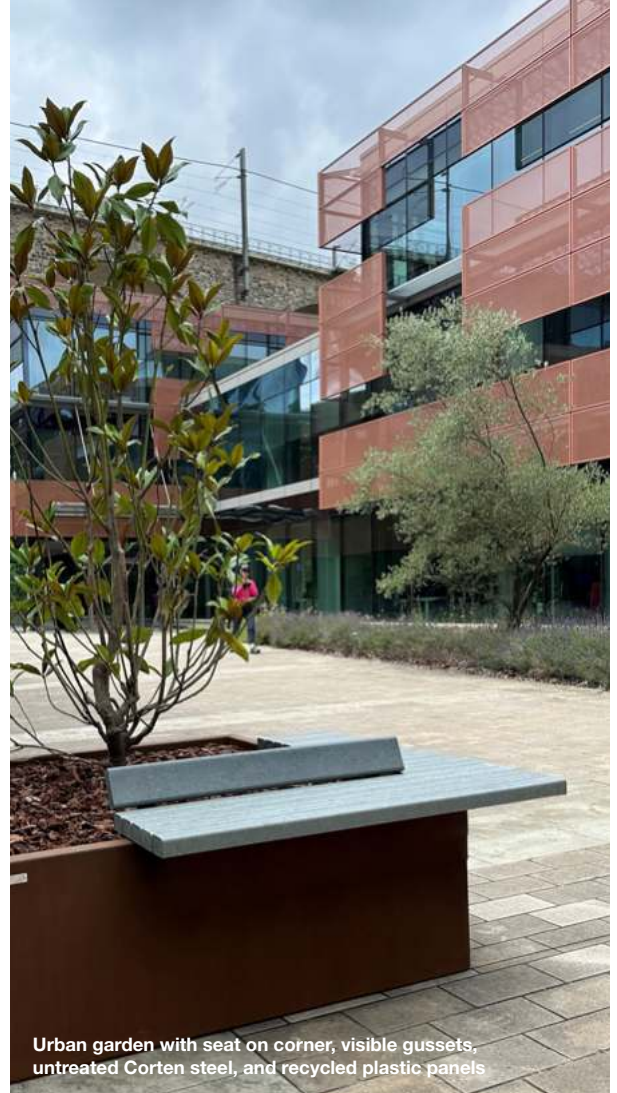

Category 10: Street furniture

Category 11: Waste collection equipment

- Upcycled or reused items
 - FreshCity shade canopy (see p. 35) wood taken from former window frames
 - Idylle composter (see p. 89) wood taken from former window frames
- Items with recycled materials
 - Flowerboxes and hanging baskets (see flowering leaflet, scan the QR code on the page opposite) made from 30% oyster waste
 - Planting liner (see p. 67) made with 100% recycled plastic
 - Panels for seats (see p. 104) made with 100% household waste

Urban garden with seat on corner, visible gussets, untreated Corten steel, and recycled plastic panels

Give your furniture a new lease of life

Does your steel or aluminium furniture need refreshing? ATECH can give your steel or aluminium products a new look thanks to repurposing or upcycling. If you have orangery planters that need a fresh lick of paint, or panels that have seen better days, we can collect them and give them a new look. Not only will you observe France's AGEC law, you'll also save money by reusing your furniture. **It's a great way to spread the word about sustainability to others!**

Contact your local ATECH salesperson to discuss options.

ATECH records your plastic waste and reduces your carbon footprint

Do you want to get rid of your old plastic pots, flowerboxes and hanging baskets without affecting your carbon footprint?

ATECH can collect and recycle them. To do so, please make sure they are clean and empty and wrap them on pallets. Contact us for more information.

We come to you
