

SIMULATED MARBLE SHOWER WALL -  
WOOD GRAIN SPECIFICATIONS

# Simulated Marble Shower Walls Wood Grain

**material:** simulated marble composite

**finish:** wood grain

**colors:** white, black, gray

**texture:** matte

**options:** 2-wall set or 3-wall set

**thickness:** 1/8"

**dimensions:**

- 36" x 96" and 60" x 96" (2-wall set)
- [2] 36" x 96" and 60" x 96" (3-wall set)

\*custom sizes available

## ? What is SMC (Simulated Marble Composite)?

*A Next-Gen Material for High-Traffic Bath Systems*

SMC is a compression-molded material made from fiberglass, unsaturated resin, aluminum hydroxide, and other performance fillers.

The result is a high-strength, lightweight composite used in bath products, wall panels, and building materials.

**Bonus:** SMC contains *no silica*, reducing installer exposure and enhancing jobsite safety.

---

### Core Material Composition

- Non-alkali fiberglass
  - Unsaturated polyester resin
  - Aluminum hydroxide
  - Curing agents
  - Color paste
- 

### Key Advantages vs. Acrylic, Cast Marble, and Artificial Stone

- ✓ Lightweight and strong
  - ✓ Moldable into custom shapes
  - ✓ Long service life under heavy use
  - ✓ Stone-like textures & appearance
  - ✓ No cracking, bowing, or discoloration
  - ✓ Chemical & cleaner resistant
  - ✓ Fire, moisture & corrosion resistant
  - ✓ No grout or joint lines
  - ✓ No slurry or wet install required
  - ✓ Cost-effective alternative to cast marble
  - ✓ Eco-friendly & recyclable
- 

### Why It Works for Commercial Projects

- Ideal for high-traffic hospitality & multi-family housing
- Faster, safer installs for crews
- Long-term durability reduces maintenance costs
