

# Retrofit in Oxford

The project in detail:

Retrofitting with Passive Purple. Here we have used Passive Purple Brush around any large gaps, window, and door reveals. After the application of Passive Purple Brush, Passive Purple Internal Vapour Control was applied to the warm side of the insulation, then exterior insulation is fitted before the new render system is applied. Not only is this property airtight, but it has a radon and methane barrier too!

**Passive Purple Brush application.**

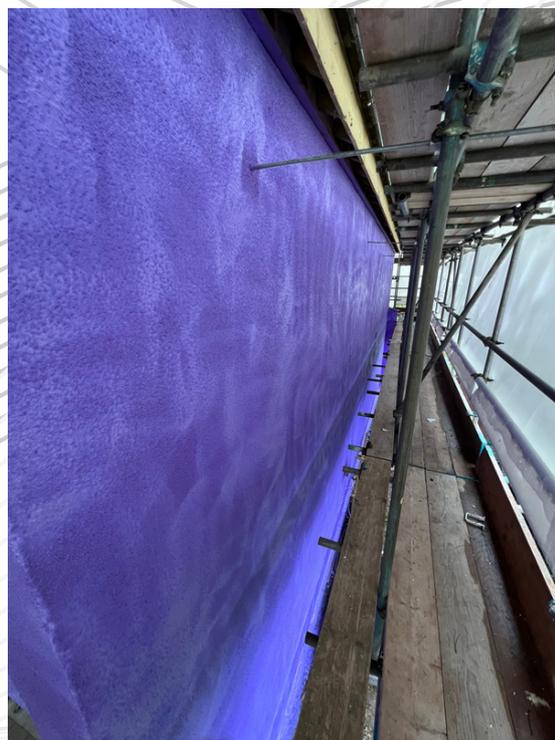

**Passive Purple-ASTM-Fire class A.**

**Walls are now ready to take the E.W.I (External wall insulation).**

**Passive Purple Spray application.**

**All external walls are air/smoke tight before external wall insulation is fitted.**

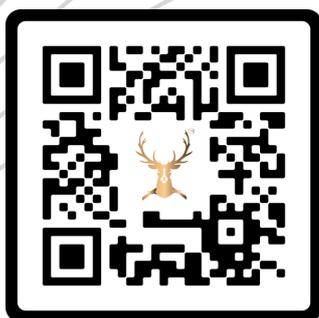

Products used:

**PASSIVE PURPLE BRUSH  
AIRTIGHT PAINT MEMBRANE**

**PASSIVE PURPLE INTERNAL  
AIRTIGHT VAPOUR CONTROL PAINT**
