

# Venetian blind window systems

Perfect heat insulation

*Der SonnenLichtManager*

External venetian blind window systems can be integrated into the facade as an unobtrusive or visible element. As the units fit seamlessly into the exterior insulation and finish systems (EIFS), these external venetian blinds easily meet the continually increasing requirements for thermal protection. As well as classic guide profiles, external venetian blind window systems with slender cable guidance or a cable/rail combination are also an option.

## Features

<b>max. width*</b>	4,000 mm
<b>max. height*</b>	4,000 mm
<b>max. area*</b>	16 m <sup>2</sup>
<b>Slats</b>	Beaded slats 80 S mm, flat slats 80 mm Dim-out slats 80 Z, 73/90/93 mm
<b>Drive</b>	Motor
<b>Fields of application</b>	New buildings, renovations

\*depending on type and equipment

## The benefits for you

- Concealed or visible integration in the facade
- No need for additional fixing of cover panels – prevention of thermal bridges
- Front sides of guide profiles can be fully plastered

## Brilliant extras

- SenSigna: acoustic early warning system
- ProVisio: improved visual privacy combined with an optimised view out
- Integrated fall protection VisioNeo
- Corner joint for all-glass corners: unimpeded view
- STM: super-fast terrace motor
- slowturn: precise slat positioning
- Integrated insect screen
